FOREWORD

During the last decade, China launched a pragmatic programme of reform in vital sectors such as trade and foreign investment to accelerate its economic development through closer economic relations with other countries. It continues to pursue its open-door policy of economic reforms, which has been a major contributing factor to the expansion of trade and investment flows in the Asian and Pacific region.

In the process of transition from a centrally planned economy to a socialist market economy, China offers new opportunities and challenges to its trading partners. The *Guidebook on Trading with the People's Republic of China* is intended to assist the Asian and Pacific countries in capitalizing on these opportunities and to facilitate their trade with China.

This is the fourth edition of the *Guidebook*. The first edition was published in 1982, the second edition in 1983 and the third edition in 1985. The present edition contains updated information and statistics reflecting the new developments in China's economy and foreign trade during the period 1986-1991, and the country's plans up to 1995. It addresses a number of technical and practical issues related to trading with China. The *Guidebook* is intended to be useful to both the private and public sectors in building their business and trade with China; it is also intended to promote economic cooperation and development in the region.

I wish to express our gratitude to the Government of the People's Republic of China for its financial support and assistance, as well as to the various concerned organizations for their assistance in compiling updated information for this *Guidebook*. Special appreciation goes to the Ministry of Foreign Trade and Economic Cooperation of China for the continuing assistance that has made this publication possible.

Rafeeuddin Ahmed
Executive Secretary
United Nations-ESCAP

PART ONE

I. ECONOMIC GEOGRAPHY AND ADMINISTRATION

A. ECONOMIC GEOGRAPHY

1. Geography

Lying in the northern half of eastern hemisphere China is situated in the south-eastern part of the Asia on the west coast of the Pacific Ocean.

China has a total land area of approximately 9.6 million square kilometres, one fifteenth of the total land area of the earth, the third largest country in the world after the Russian Federation and Canada.

From north to south, the territory of China extends 5,500 kilometres from the central line (latitude 53°31'N) of the main navigation channel of the Heilong River north of the town of Mohe in Heilongjiang Province to the Zengmu Reef (latitude 4°15'N) at the southernmost tip of the South China Sea Islands. From west to east, it measures 5,200 kilometres, stretching from the Pamirs (longitude 73°40'E) west of Wuqia Country in the Xinjiang Uygur Autonomous Region to the east corner of the boundary marker (longitude 135°5'E) at the confluence of the Heilong and Wusuli rivers.

The Chinese mainland is flanked by the Bohai Sea, the Yellow Sea, the East China Sea in the east and the south. Contiguous to each other, the four seas form a northeast-southwest arc covering a total area of 4.78 million square kilometres. More than 5,000 islands are scattered over China's vast territorial seas, the largest being Taiwan (Province of China) and the next largest Hainan. The numerous islands, islets, reefs and shoals dotting the South China Sea are collectively referred to as the South China Sea Islands but individually known as the Dongsha, the Xisha, the Zhongsha and the Nansha islands.

China has a land boundary exceeding 20,000 kilometres in length and is bordered by the Democratic People's Republic of Korea to the east; the Russian Federation to the northeast and northwest and Mongolia to the north; Afghanistan, Pakistan, Nepal, Sikkim, Bhutan, and India to the west and the southwest; and Myanmar, the Lao People's Democratic Republic and Viet Nam to the south. Across the seas to the east and the Southeast it faces Japan, the Philippines, Malaysia, Brunei Darussalam and Indonesia. Its mainland coast line extends over 18,000 kilometres.

China abounds in mountains. Of the world's nineteen mountains that exceed the 8,000 metres in height, seven are in China or on its borders. Many of China's world-renowned mountains are geographically important, some providing headwaters for major rivers and some forming climatic or river basin divides. Mount Qomolangma, the main peak of the Himalayas, soars 8,848.13 metres above sea level on the Sino-Nepalese border, ranking as the highest in the world. China also has a great number of rivers, more than 1,500 of which have a catchment exceeding 1,000 square kilometres. Among them, the Changjiang (Yangtze River), Huanghe (Yellow River), Heilongjiang, Zhujiang, Haihe and Huaihe are the major ones.

2. Topography

China is a mountainous country and has a varied topography, with hills, mountains and plateau covering two-thirds of the country's total land mass.

China's topography varies from cloud-capped peaks to basins of varying shapes and sizes, from undulating plateaus and killocks to broad and fertile plants. Huge deserts and wide expanses of grassland prevail over China's northwest, while rivers, canals and lakes criss-cross the extensive catchment area of the middle and lower reaches of the Changjiang (Yangtze River). From the air, China's topographical outline looks like a west-east staircase, descending step by step from the Qinghai-Tibet Plateau to the coastal area in the east.

The Qinghai-Tibet Plateau, the top of the staircase, covers 2.2 million square kilometres, averaging 4,000 metres above sea level. It is the highest and largest plateau on earth and is popularly called "the roof of the world".

From the eastern and northern rims of the Qinghai-Tibet Plateau, the terrain drops abruptly to between 2,000 and 1,000 metres above sea level, forming the second step down the staircase, which consist of the Junggar, the Tarim and the Sichuan basins, and the Inner Mongolia, the Loess and the Yunnan-Guizhou Plateaus.

Crossing the stretch of mountain area on the east margin of the second step of the staircase, the Greater Hinggan, the Taihang, the Wushan, the Wuling and the Xuefeng mountains to the sea coast, the land drops to less than 500 metres above sea level to form the third step down the staircase. Here, lying from north to south, are the Northeast China Plain, the North China Plain, the Middle-Lower Changjiang Plain and the Zhujiang (Pearl River) Delta. Foothills and hilly country border these plains.

To the east of the third step are the shallows, which are an extension of the land into the sea. Less than 200 metres below water, these sand and mud deposits carried here by rivers line the coast of the mainland.

3. Climate

China has a climate dominated by the monsoonal winds rising from the continent and the ocean. Cold air masses from Mongolia and Siberia make some parts of China cold and dry in winter; it is the coldest country among those of the same latitudes. Because of warm monsoons from the Pacific and Indian oceans, summer is humid in the southern part of China and rainfall is concentrated in a few summer months.

Owing to the vast territory and varied topography, the climate in China differs greatly from region to region. In general, Leizhou Peninsula, Hainan Island and the southern part of Taiwan (Province of China) the South China Sea islands and Yunnan Province have a tropical climate. The north-eastern part of China has a short and cool summer and a severe winter. The area around the Changjiang and Huaihe valleys is in the temperate zone; it is warm and humid with four clear distinguishable seasons. The weather in the Inner Mongolia – Xinjiang area is very dry, and there can be extreme temperature changes in a day. The Tibet Plateau has intense and plentiful sunshine, but little rain; the weather is inclement. Some areas on the Yunnan-Guizhou Plateau have a mild winter and cool summer and have spring-like weather the whole year through.

Table 1. Annual temperature difference in China's major cities

Cities	*Average January temperature*	*Average July temperature*	*Annual temperature difference*
Beijing	- 4.8°C	25.8°C	30.6°C
Shanghai	3.5°C	28°C	24.5°C
Qingdao	- 1.1°C	23.7°C	24.8°C
Guangzhou	13.7°C	28.3°C	14.6°C
Wuhan	2.7°C	29.1°C	26.4°C
Urumqi	- 15.8°C	23.9°C	39.7°C
Shenyang	- 13°C	24.9°C	37.9°C

Source: *China: A General Survey*, Foreign Language Press, 1983.

As a result of the monsoons, the temperature of the north and the south is very different in winter, but similar in summer, as shown in table 1.

4. Population and nationalities

China is the most populous country in the world. According to the figure released by the Chinese Government on 14 April 1990, China has a population of 1,140 million, about one-fifth of the world's population; 80 per cent of people live in rural areas. The population density is about 116 people per square kilometre.

During the first two decades of last 30 years China's population grew at an average rate of 2-3 per cent a year. Although family planning was introduced in the 1970s, birth control was not strictly carried out. From 1949 to 1980, the population increased from 542 million to nearly 1 billion. Between 1964 and 1982, (the 18 years between the second and third national census), the Chinese population increased by 310 million.

In recent years, a strong family planning campaign has been carried out throughout the country, and population growth has been successfully reduced to 1.2 per cent per annum. According to China's state planning, the total population growth is to be limited to 190 million in the 18 years ending in the year 2000. If the effort is continued, the growth rate during 1980-2000 can probably be held at its current level of 1.2 per cent per year.

China is a unified multinational country with 56 nationalities. The Han nationality accounts for 94 per cent of the total population and the other 55 nationalities make up the rest. There are hundreds of dialects spoken in different provinces in China, but the national language is Putonghua (common speech). Minority languages are also spoken and written among the ethnic groups.

5. Natural resources

China has over 100 million hectares of cultivated land and 319.08 million hectares of grassland. The area under forests is 115.25 million hectares, or 12 per cent of the total area of China.

The country is also rich in water resources. With a total annual flow of 2,614 billion cubic metres, rivers in China have a total hydropower potential of 676 million kilowatts. Surface water is scarce in North-west China and other arid hilly areas in the country. But rich subterranean water resources have been found in some of these areas.

Table 2. Population and natural resources in China

Population and Natural Resources in China

1. Population		
(1) Population in April of 1990	1.14	billion
(2) Density	116	people per sq.km.
2. Land		
Land area	9.6	million sq.km.
3. Weather		
(1) Average annual rainfall	630	mm.
(2) Total annual rainfall	6,000	billion cubic metres
Humid areas (aridity under 1.0)	32	%
Semi-humid areas (aridity 1.0-1.5)	15	%
Semi-arid area (aridity 1.5-2.0)	22	%
Arid areas (aridity above 2.0)	31	%
4. Forested Areas		
(1) Forests	115.25	million hectares
(2) Forest coverage	12	% of China's total area
(3) Total timber reserves	10.26	billion cubic metres
5. Grasslands		
(1) Total grassland acreage	319.08	million hectares
(2) Grassland suitable for grazing	224.34	million hectares
6. Hydrology & Water Resources		
(1) Total annual river flow	2,614.4	billion cubic metres
(2) Total freshwater surface	16.64	million hectares
Surface suitable for fish breeding	5.03	million hectares
Surface where fish is bred	3.05	million hectares
(3) Hydropower resources	676	million kw.
Hydropower resources suitable for exploitation	379	million kw.
(4) Marine fishing grounds	818,000	sq. nautical miles
Sea surface suitable for fish breeding	492,000	sq. nautical miles
Sea surface where fish is bred	163,000	sq.nautical miles
(5) Total length of coastline	18,000	kilometers
7. Mineral Resources		
(1) Coal reserves	859.39	billion metric tons
(2) Iron ore reserves	49.57	billion metric tons

Note: With the exception of figures appearing under 2 and 4, all the other figures in this table do not include those of Taiwan (Province of China).

Table 3. Population by regions
(end of 1989)

(10 thousand)

Region	*Total population*	*Male*	*Female*	*Urban*	*Rural*	*Density (person/km²)*
Total in China	103 475	53 423	50 052	33 006	70 469	108

Yunnan	3 362	1 702	1 660	878	2 484	85
Tibet	197	97	100	20	177	2
Shaanxi	2 966	1 546	1 420	1 101	1 865	145
Gansu	2 016	1 042	974	415	1 601	45
Qinghai	402	206	196	129	273	6
Ningxia	406	210	196	115	291	61
Xinjiang	1 344	687	657	544	800	8

(a) Underground resources

China's underground resources are rich in terms of quantity and variety. Practically all the known minerals in the world can be found in China. Surveys reveal that China has 150 kinds of minerals. Tungsten, tin antimony, zinc, titanium, tantalum, lithium and rare earth rank first in the world. Those of lead, nickel, mercury, molybdenum rank second, copper is fourth and aluminum fifth. Among nearly 80 kinds of non-metallic ores, China leads the world in troilite and magnetite and ranks second in phosphorus. It is also among the world's leading of absestoes, graphite and fluorite.

China's proven coal reserves exceed 859 billion tons. Among China's provinces, Shanxi Province ranks first with more than 200 billion tons of coal reserves, followed by Inner Mongolia with more than 190 billion tons and by Shaanxi, Guizhou, Ningxia and Anhui, all with more than 20 billion tons. A preliminary survey indicates that China has 49 billlion tons of iron, mainly found in the north of the country.

In addition to the existing oil fields, the preliminary survey reveals that China has around 30-60 billion tons of oil reserves. Natural gas discoveries on land areas are also rich. Gas fields are extensively distributed in 20 of China's provinces, municipalities and autonomous regions.

Rich geothermal resources have also been found in the country. A total of over 2,500 hot springs some with temperatures as high as 100°C have been discovered to date. Hot subterranean water has been found in many areas. And steam fields have been located in Yunnan, Tibet, Taiwan (Province of China) and other areas.

(b) Vegetation

China has close to 32,000 species of higher plants, including nearly every kind of vegetation found in the northern hemisphere. As cultivated fields account for only 11 per cent of China's total area, vast regions of natural vegetation remain to be reclaimed, transformed and exploited in accordance with local conditions. Owing to the varying degrees of influence by the ocean monsoons, the climate changes, in a south-east-north-west direction, from the humid to the semi-arid and finally to the arid type, resulting in three corresponding regions of vegetation, forest, grassland and desert.

Traditional economic plants include cotton, soya bean, rapeseed, sugarbeet, sugarcane, tung oil and tea. Tropical crops such as rubber, coffee, oil palm, sisal hemp, cacao and pepper are also grown.

(1) Humid forest regions

  - Cold temperate deciduous needle-leaf forest region
  - Temperate deciduous broad-leaf forest region
  - Subtropical evergreen broad-leaf forest region
  - Tropical rain-forest regions

(2) Semi-arid grassland regions

  - Temperate grassland region
  - Alpine meadow-grassland region

(3) Arid desert regions

- Temperate desert region
- Alpine desert region

Table 4. Major mountain ranges

Name of mountain range	*Height of mountain peak (m)*	*Height of snow line (m)*	*Glacier area* (km^2)
Altay Mountains	4 374	3 000 – 3 200	287
Tianshan Mountains	7 435	3 600 – 4 400	9 548
Qilian Mountains	5 826	4 300 – 5 240	2 063
Pamirs	7 579		2 258
Kunlun Mountains			11 639
Karakorum Mountains	8 611	5 100 – 5 400	3 265
Tanggula Mountains	6 137		2 082
Qiangtang Plateau	6 596		3 566
Nyainqentanglha Mountains	7 111	4 500 – 5 700	7 536
Hengduan Mountains	7 556	4 600 – 5 500	1 456
Himalayas	8 848	4 300 – 6 200	11 055
Gangdise Mountains	7 095	5 800 – 6 000	2 188

Table 5. Major rivers

Name of river	*Drainage area* (km^2)	*Length (km)*	*Annual flow* (100 million m^3)
Changjiang (Yangtze River)	1 808 500	6 300	9 793
Huanghe (Yellow River)	752 443	5 464	560
Heilongjiang (in Chinese territory)	896 756	3 101	1 192
Zhujiang	442 585	2 210	3 070
Liaohe	228 960	1 390	145
Haihe	264 617	1 090	284
Huaihe	269 150	1 000	530

Note: The total surface of lakes in the country is 75,607 square kilometres, with a freshwater storage capacity of 215 billion cubic metres.

B. ADMINISTRATIVE SYSTEM

1. Administrative divisions

The administrative divisions are basically a three-level system of provinces, counties (cities) and townships (towns).

The country is divided into twenty-three provinces, five autonomous regions, and three municipalities directly under the Central Government.

Provinces and autonomous regions are divided into autonomous prefectures, counties, autonomous counties, and cities.

Counties and autonomous counties are divided into townships, nationality townships, and towns. There are 2,069 counties and autonomous counties in China.

The 23 provinces are: Anhui (Hefei)[1], Fujian (Fuzhou), Gansu (Lanzhou), Guangdong (Gangzhou), Guizhou (Guiyang), Hebei (Shijiazhuang), Henan (Zhengzhou), Hubei (Wuhan), Hunan (Changsha), Heilongjiang (Harbin), Jilin (Changchun), Jiangsu (Nanjing), Jiangxi (Nanchang), Liaoning (Shenyang), Qinghai (Xining), Shaanxi (Xi'an), Shandong (Jinan), Shanxi (Taiyuan), Sichuan (Chengdu), Taiwan, Yunan (Kunming), Zhejiang (Hangzhou), and Hainan (Haikow).

The five autonomous regions are: the Inner Mongolia Autonomous Region (Hohhot), the Ningxia Hui Autonomous Region (Yingchuan), the Xinjiang Uygur Autonomous Region (Urumqi), the Guangxi Zhuang Autonomous Region (Nanning), and the Tibet Autonomous Region (Lhasa).

Beijing, Shanghai and Tianjin are the three municipalitiess directly under the Central Government.

Beijing is the capital of the People's Republic of China covering an area of 16,800 square metres and has a population of 9,470,000 at the end of 1989. It is the country's political, economic, scientific and cultural centre, as well as the hub of its communications network. The government organizations and most of the foreign and international agencies are located in Beijing. With a history of more than 800 years, Beijing is bejewelled with scenic spots and places of historical interest. Shanghai and Tianjin are important industrial bases and ports. The populations of Shanghai and Tianjin were 12.05 million and 7.99 million respectively at the end of 1989.

2. Structure of the State organs

(a) The National People's Congress

The National People's Congress (NPC) is the highest organ of state power. Its permanent body is the Standing Committee of the National People's Congress. NPC is composed of deputies elected by the provinces, autonomous regions and municipalities directly under the Central Government and by the armed forces. Election of deputies of NPC is conducted by its Standing Committee.

NPC is elected for a term of five years and meets in session once a year under normal circumstances. It has the power to elect the President and the Vice-President of the State; to decide on the choice of the Premier of the State Council upon nomination by the President of the State; to decide on the choice of the Vice-Premiers, State Councilors, Ministers in Charge of ministries and commissions, the Auditor-General and the Secretary-General of the State Council upon nomination by the Premier; to elect the Chairman of the Central Military Commission and, upon his nomination, to decide on the choice of all other members of the Central Military Commission; and to elect the Procurator-General of the Supreme People's Procuratorate and the President of the People's Court.

---

[1] The names in brackets are the capitals of provinces and autonomous regions.

NPC establishes a Nationalities Committee, a Law Committee, a Finance and Economic Committee, an Education, Science, Culture and Public Health Committee, a Foreign Affairs Committee, an Overseas Chinese Committee and such other special committees as are necessary.

(b) The State Council

The State Council is the executive body of the highest organ of state power, and the highest organ of state administration. It is responsible and accountable to NPC.

The State Council is composed of the Premier, the Vice-Premiers, the State Councillors, the Secretary-General, the Ministers and the Auditor-General. At present, the State Council has one Premier and four Vice-Premiers and State Councillors.

The State Council's term of office is the same as that of NPC. The State Council establishes an auditing body to supervise thorough auditing of the revenue and expenditure of all departments under it and of the local governments at different levels, and those of the state financial and monetary organizations and of departments and undertakings and enterprises.

(c) The Institutions under the State Council (by May 1991)

Commissions under the State Council:

State Economic and Trade Commission

State Planning Commission

State Commission for Economic Restructuring

State Education Commission

State Science and Technology Commission

State Commission of Science and Technology and Industry for National Defence

State Commission for Nationalities Affairs

State Family Planning Commission

State Commission for Physical Cultural and Sports

Ministries under the State Council:

Ministry of Foreign Affairs

Ministry of National Defence

Ministry of Public Security

Ministry of State Security

Ministry of Civil Affairs

Ministry of Justice

Ministry of Finance

Ministry of Personnel

Ministry of Labour

Ministry of Geology and Mineral Resources

Ministry of Construction

Ministry of Power Industry

Ministry of Railways

Ministry of Communications

Ministry of Machine-Building Industry

Ministry of Metallurgical Industry

Ministry of Chemical Industry

Ministry of Coal Industry

Ministry of Electronics Industry

Ministry of Post and Telecommunications

Ministry of Water Resources

Ministry of Agriculture

Ministry of Forestry

Ministry of Internal Trade

Ministry of Foreign Trade and Economic Co-operation

Ministry of Culture

Ministry of Radio, Film and Television

Ministry of Public Health

Ministry of Supervision

Auditor-general of Auditing Administration

The People's Bank of China

Bureaux under the State Council:

State Statistical Bureau

State Administration of Commodity Prices

General Customs Administration

Civil Aviation Administration of China

National Tourism Administration

National Bureau of Oceanography

National Meteorological Bureau

State Seismological Bureau

State Archives Bureau

Bureau of Legislative Affairs

Office of Foreign Affairs

Office in Charge of Special Economic Zones

Office of Overseas Chinese Affairs

Office of Taiwan Affairs

Office in Charge of Hong Kong and Macau Affairs

Bureau of Building Materials Industry

Administration for Industry and Commerce

State Land Administration

Press and Publication Administration

State Technology Supervision Bureau

State Pharmaceutical Administration

(d) Local people's congresses and local people's governments

Local people's congresses and local people's governments are established in provinces and municipalities directly under the Central Government, counties, cities, municipal districts, townships, nationality townships and towns. Local people's congresses at different levels are local organs of state power, while local people's governments are their executive organs and local organs of state administration. Organs of self-government are established in autonomous regions, autonomous prefectures and autonomous counties. Local governments are responsible and accountable to the local congresses at the corresponding level; they are the executive bodies of local organs of state power as well as the local organs of state administration at the corresponding level.

(e) People's courts and people's procuratorates

The people's courts are the judicial organs of the state. The People's Republic of China establishes the Supreme People's Court (SPC) and the local people's courts, military courts and other special courts as well as the Supreme People's Procuratorate (SPP) and local people's procuratorates. SPC is the highest judicial organ and is responsible to NPC and its Standing Committee. SPP is the highest procuratorial organ and its responsible to NPC and its Standing Committee.

II. ECONOMY

A. OWNERSHIP FORMS OF ECONOMY

Before the economic reforms began in 1979, China's economy was largely controlled by the State. Industrial and commercial enterprises in urban and rural areas were state-owned. Forestry and land belonged to the government, commerce was run by the State. Collective ownership in rural areas was weak in financial strength and small in capacity. There was actually no private ownership.

Over the last 11 years from 1989-1991, the collectively and privately owned commerce and enterprises, encouraged by reforms policy, have come into being in large numbers. In 1980, the state-owned firms, including small ones accounted for 76 per cent of China's industrial output value. In 1990, ten years later, the percentage dropped to 54.6 per cent, while the collectively and privately owned businesses including foreign-funded ones grew to account for 45.5 per cent. By 1991, the number of private enterprises reached over 100,000 with 2 million employees and a registered capital of 9.5 billion yuan.

Collective and private economy cover domestic commerce, chemical, light, electronic, building, textile industries as well as aquatic farming and metallurgical processing.

At present China's economy comprises State (public), collective and individual economy. Yet the state economy is still strong and firm and a leading force in the national economy.

B. ECONOMIC SYSTEM AND REFORMS

1. Characteristics of the past economic system

Before the reforms of the economic system, China pursued a policy of centrally planned and managed economy. The Central Government used to decide on both macro- and micro-economic activities and monopolized purchasing and marketing of commodities and the supply and allocation of materials; all economic targets were set by the State and dictated to local governments and enterprises; economic activities were mainly regulated through administrative measures, not through economic laws. All profits generated by local governments and enterprises had to be handed over to the State, and the State provided all enterprise capital and other investments such as equipment, raw materials and manpower through the unified distribution system of the State; products were manufactured according to the state plan and marketed through the state commercial channels. As the State took care of losses incurred, enterprises turned to the State for everything. This system resulted in low production efficiency and waste of materials and capital.

2. Pricing system

China began its centralization of price-setting in 1953. This centralization system lasted till economic reform began in 1980. Under the old system, the State controlled major industrial and agricultural raw materials and products through price-setting and material-allocating. State enterprises had no right to decide on price for their products nor on their marketing. On the other hand, enterprises had to obtain their production materials at state-set price through state-set channels.

To cope with the centralization system, China established price administrative bodies at central and local levels throughout the country.

Local governments are empowered to set prices for goods placed under their jurisdiction according to the State pricing policy. The goods under the local control are non-essential industrial and agricultural products. The State General Price Administration (SGPA) is the top organ which sets prices on such important goods.

In early 1980s, the Chinese authorities began to adopt a two-set price system for industrial and agricultural production materials. Price for products to be allocated or marketed within the state plan is set at an official level, which is called "official price", while market price is set for production materials and products that are beyond the state plan. Official price is much lower than market price. The two-set price policy in fact is intended to be part of efforts to reform economic structure including price structure as enterprises are given certain freedom to purchase and market at a relaxed price. Yet, this policy has proved to be unworkable and has created problems, therefore the Chinese authorities have decided to switch to a one-price structure.

With the economic reform going deeper, industrial enterprises, in recent years, are permitted to set by themselves prices for their products for marketing through negotiations between enterprises and the state commercial administration if these products are beyond state-allocated production quota. In state-selected cities free markets have been set at which cement, steel, metals, fertilizers, timber, sugar etc. used to be controlled by the State can be traded under the state guidance price, if those items are produced above the state quota.

In rural areas, farmers are free to sell their sideline produce such as eggs, meat, vegetables, fruits, and aquatic products at free market price. In addition, such products as rice, grains, edible oil, bean, cotton, used to be distributed through government planned channel, can also be traded at free market by farmers if they have fulfilled their hand-over-quota to the State.

A lift on price control has considerably reduced products under the state control. By the end of 1991, the purchasing price value for agricultural products traded at government-set price accounts only for about 25 per cent among the total value, while purchasing price value for industrial materials traded at state-set price accounts for 45 per cent among the total value. The commodities whose retail prices are set by the state are decreased to about 30 per cent in terms of total retail value.

3. Planning system

China's economy is basically state planned. An annual national economic plan covers plans for production, allocation of funds and materials, wages and labour and imports and exports of important items. The national plan is drawn up by the State Planning Commission (SPC) and approved by the National People's Congress. A national plan is based on the plans worked out by each local planning body and incorporated by provincial planning body who submits plans to the SPC. In the case of enterprises directly under the administration of ministries and commissions, a plan is first prepared at enterprise level and is then forwarded to the planning bureau of the corresponding industries for incorporation. The SPC, after collecting plans from provinces and ministries and commissions, does overall balance and integration.

Following the lift on control in planning system, the number of industrial products controlled by mandatory state plans has dropped from 120 items in 1979 to 60 by the end of 1992, the variety of materials under centralized distribution has dwindled from 256 to 27 and the number of commodities directly managed by the government has also decreased from 188 to 24. Non-essential products are no longer put under the State plan. In rural areas, farmers contract with the government to fulfil the targets

ESCAP'S GUIDEBOOK ON TRADING WITH THE PEOPLE'S REPUBLIC OF CHINA (FOURTH EDITION)

Questionnaire for Readers

Dear Reader:

With a view to assessing the usefulness of the *Guidebook* and improving its future editions, the authors wish to request your frank opinion regarding the contents, presentation and scope of the *Guidebook* by completing the following questionnaire and airmailing it to:

Chief
International Trade and Tourism Division
United Nations ESCAP secretariat
United Nations Building
Rajdamnern Avenue
Bangkok 10200
Thailand

Please check (✔) where appropriate or write your answer below:

1. How did you come to know about the availability of the *Guidebook*?

   ( ) Newspaper/professional journal/newsletter

   ( ) Training course/seminar/workshop

   ( ) Other source (please specify) ....

   ....

2. Do you find the *Guidebook* ?

   ( ) Very useful

   ( ) Useful

   ( ) Not so useful, because ....

   ....

3. What particular information in the *Guidebook* has been most useful?

   ....

   ....

   ....

4. What additional information would you suggest be included in the next edition of the *Guidebook*?

....

....

....

5. What information would you suggest be excluded in the next edition of the *Guidebook* and why?

....

....

....

6. Any additional suggestions for the improvement of the contents, presentation, distribution etc. of the next edition of the *Guidebook*.

....

....

....

7. Do you wish to receive a copy of the new edition of the *Guidebook*?

( ) Yes. ( ) No.

If "yes", please write/type your name and address clearly below.

Thank you for your cooperation.

for such essential items as rice, grains, cotton, edible oils; on the other hand, they have the right to decide on production plan for side-line products and sell them on the free market. In both rural and urban areas, small and medium-sized enterprises are invested with power to decide what, and how much to produce in the light of market requirements.

4. Management system

Before the economic reform started in 1979, China's management system, like its pricing and planning system, empowered state-enterprises with no right to decide the size of labour, wage and welfare of staff and the expansion of an enterprise. Factory director was appointed, staff were allocated and wage level was set according to the State plan. The enterprises handed over all their profits to the State, who, in turn was responsible for losses of enterprises. The management in such a way prevented enterprises to operate at high efficiency with low cost.

During the reforms, decision-making power has been introduced in enterprise management. Enterprises pay taxes instead of turning all profits to the State; they are given right to use funds for factories' expansion and welfare of staff within certain limits after paying all taxes to the State. Yet, the centralized management has not basically changed.

Since 1989, the Chinese authorities have practiced contract system in some selected state-enterprises, who are given free hand to raise or lower wages, promote or demote their managers, hire or dismiss their workers. All staff are enrolled on contract basis, their pay is fixed according to their economic performance and efficiency. Instead of being appointed, factory leaders are publicly enrolled or elected by staff. If the staff, including responsible members, fail to carry out their duties, they will be dismissed. In addition, those enterprises are invested right to use funds for production expansion and welfare of the staff after they pay off tax to the State. According to the Chinese authorities, about 13.5 million workers nation-wide have signed employment contracts, accounting for 14 per cent of the state employment forces by the end of 1992, and the contract system will be applied gradually to all state enterprises by the year 2000.

5. Government budget

(a) China's budget plan

China's budget plan is prepared by the Ministry of Finance, balanced overall by the State Planning Commission, examined by the State Council and approved at the National People's Congress before its implementation. The budget plan comprises the budgets of the central and local governments at various levels.

China's budgetary year follows the calendar year, from 1 January to 31 December. At the end of the year all regions, departments and units prepare the year's final accounts and report them to the departments in charge. The State final accounts are the summary of the implementation of the State budget.

The State budgetary revenue comes mainly from taxes and profits collected from State-owned enterprises, collective and individual-run enterprises and businesses.

Expenditures include outlays on construction, culture, education, sciences, public health, government administration and national defence among others.

China's fiscal policy is to keep revenue and expenditures of each year basically balanced. However China has been in the red for the past 14 consecutive years from 1979-1992.

(b) Implementation of the 1991 State budget

The total state revenues in 1991 came to 358.281 billion yuan, or 104.1 per cent of the budgeted amount, and total state expenditures amounted to 379.387 billion yuan, or 106.4 per cent of the budgeted figure. This resulted in a deficit of 21.106 billion yuan, or 8.76 billion yuan more than the budgeted amount. The deficit was composed of 18.066 billion yuan in the central budget and 3.04 billion yuan in local budgets.

The total state revenues described above include domestic receipts of 340.91 billion yuan, or 103.9 per cent of the budgeted figure, and receipts from foreign loans to the amount of 17.371 billion yuan, or 107 per cent of the budgeted amount. The breakdown of major items of domestic revenue is as follows: total tax receipts came to 298.606 billion yuan, or 98.4 per cent of the budgeted figure; receipts from enterprises totalled 7.277 billion yuan, or 96.4 per cent of the budgeted amount; funds collected for construction of key energy and transport projects amounted to 13.367 billion yuan, or 99 per cent of the budgeted amount; receipts from domestic debts totalled 28.125 billion yuan, or 148 per cent of the budgeted figure; and receipts from other sources came to 25.907 billion yuan, or 130.4 per cent of the budgeted figure. The state also paid out subsidies for losses by state enterprises amounting to 50.642 billion yuan, or 5.03 billion yuan less than the budgeted figure. This sum has been deducted from the total revenues.

Of total state expenditures, 362.016 billion yuan, or 106.3 per cent of the budgeted figure, came from domestic revenues and 17.371 billion yuan, or 107 per cent of the budgeted amount, from foreign loans. The breakdown by major categories is as follows: capital construction expenditures came to 72.633 billion yuan, or 106.4 per cent of the budgeted figure; funds expended to tap the potential of existing enterprises, upgrade technology and subsidize trial manufacture of new products amounted to 18.349 billion yuan, or 108.6 per cent of the budgeted amount; aid to rural production and other operating expenses for agriculture came to 24.257 billion yuan, or 103.4 per cent of the budgeted figure; expenses for urban construction and maintenance projects totalled 13.18 billion yuan, or 101.7 per cent of the budgeted figure; operating expenses for culture, education, science and public health amounted to 69.907 billion yuan, or 103.4 per cent of the budgeted amount; expenditures for national defence totalled 33.029 billion yuan, or 101.6 per cent of the budgeted figure; administrative expenses came to 34.782 billion yuan, or 109.6 per cent of the budgeted amount; and subsidies to compensate for price increases amounted to 37.082 billion yuan, or 112.6 per cent of the budgeted figure. In addition, 16.602 billion yuan was spent on amortizing domestic debt and 8.028 billion yuan on servicing foreign debt.

6. The draft State budget for 1992

The draft state budget, on the basis of a single budget system, breaks down as follows: total state revenues will be 391.213 billion yuan, an increase of 9.2 per cent over 1991, consisting of domestically generated revenues totalling 370.588 billion yuan, an increase of 8.7 per cent (or 5.8 per cent when receipts from raising domestic debts are deducted) and of receipts from foreign loans totalling 20.625 billion yuan, an increase of 18.7 per cent over 1991. Total financial expenditures will be 411.999 billion yuan, an 8.6 per cent increase over 1991. Out of this figure, some 391.374 billion yuan is to be covered by domestic funds, an 8.1 per cent increase over 1991, and 20.625 billion yuan will be covered by foreign loans, an 18.7 per cent increase over 1991. This leaves a deficit of 20.786 billion yuan.

The "Regulations for Management of the State Budget" stipulate that starting this year the state budget will change from a single budget system to a dual budget system. This is an important step in reform of the state budget system.

The draft state dual budget for 1992 was formulated according to the method defined by the State Council. The regular and construction budgets included are as follows:

- Tax receipts, 304.242 billion yuan, consisting of:
  - (1) 67.17 billion yuan of commodity tax, 47.63 billion yuan of value added tax, 61.64 billion yuan of business tax, 55.101 billion yuan of income tax from state-owned enterprises, 5.481 billion yuan of regulatory tax from state-owned enterprises, 10.6 billion yuan of income tax from collective-owned enterprises, 20 billion yuan of customs duties and 7.28 billion yuan of agricultural tax;
  - (2) 5.667 billion yuan of receipts from enterprises;
  - (3) 12.3 billion yuan of receipts from state budget regulating funds;
  - (4) 10.902 billion yuan of receipts from other sources; and
  - (5) 30.87 billion yuan was paid out in subsidies to make up for losses for non-productive enterprises, which represent a debit in the budget already deducted from the projected receipts.
- The expenditures in the regular budget amount to 257.631 billion yuan and represent 62.5 per cent of total expenditure in the budget. The main expenditures break down as follows:
  - (1) 15.52 billion yuan of non-productive capital construction;
  - (2) expenditures for development and operation of certain undertakings and for social insurance, 101.977 billion yuan, including 12.345 billion yuan of expenses for agriculture, forestry and water conservancy, 76.951 billion yuan in expenses for culture, education, science and public health, and 6.731 billion yuan for pensions and social relief payments;
  - (3) expenses for building up national strength, 77.181 billion yuan, including 36.651 billion yuan for administrative expenses and 37 billion yuan for national defence;
  - (4) subsidies to compensate for price increases, 33.602 billion yuan;
  - (5) miscellaneous expenses, 26.651 billion yuan; and
  - (6) central and local reserves, 2.7 billion yuan.

In the regular budget, when revenues are set against expenditures there will be surplus of 44.61 billion yuan.

- Revenues in the construction budget total 74.957 billion yuan. The main receipts break down as follows:

(1) 44.61 billion yuan of regular budget surplus;

(2) 47.368 billion yuan of receipts for special construction projects, including 16.2 billion yuan from funds collected for construction of key energy and transport projects, 10.92 billion yuan from urban construction and maintenance tax, 3.1 billion yuan from the investment orientation regulating tax on fixed assets, and 1.7 billion yuan from cultivated land occupation tax; and

(3) 2.8 billion yuan of miscellaneous receipts.

Subsidies to make up for losses in productive enterprises will total 19.821 billion yuan, representing a budget debit already deducted from receipts.

– Expenditures in the construction budget total 154.368 billion yuan, some 37.5 per cent of total budgetary expenditures. The breakdown of major items of expenditure is as follows:

(1) productive capital construction, 58.457 billion yuan, including 37.832 billion yuan of domestic funds and 20.625 billion yuan of foreign loans used for capital construction;

(2) tapping the potential of existing enterprises, upgrading technology and subsidizing trial manufacture of new products, 17.973 billion yuan;

(3) additional working capital for enterprises, 1.108 billion yuan;

(4) expenses for geological surveys, 4.263 billion yuan;

(5) support for agricultural production, 13.653 billion yuan, including 4.388 billion yuan of special funds for agricultural development and 9.265 billion yuan for support of production in rural areas;

(6) expenses for urban construction and maintenance, 13.21 billion yuan;

(7) development funds to aid economically underdeveloped areas, 1.819 billion yuan;

(8) expenses for simple construction projects for commercial departments, 970 million yuan; and

(9) servicing of domestic and foreign debts, 43.005 billion yuan, including 34.653 billion yuan for amortizing domestic debts and 8.352 billion yuan for servicing foreign loans.

In the construction budget, expenditures exceed revenues, leaving a deficit of 79.411 billion yuan which is to be covered by the issuance of treasury bonds and borrowing from the banks, including 38 billion yuan in receipts from generation of domestic debt, 20.625 billion yuan in receipts from foreign loans and 20.786 billion yuan in receipt from domestic loans (equivalent to the hard deficit in the single budget system).

In the 1992 state budget, expenditures for agriculture amount to 25.998 billion yuan (including agricultural expenditures in both the regular and construction budgets), an increase of 7.2 per cent over the previous year; expenses for eduction, 45.211 billion yuan, an increase of 11.3 per cent; expenses for science, 5.347 billion yuan, an increase of 7.4 per cent; and expenses for national defence, 37 billion yuan, an increase of 12 per cent. Including expenditures listed under other budget items and extrabudgetary capital used for these sectors, the state investment for 1992 in agriculture will total 56.611 billion yuan; in eduction, 61.651 billion yuan; and in science and technology, 19.451 yuan.

7. Tax system

China adopts a multi-tax system with sales and income and commercial and consolidated taxes as the main components. Under this system, enterprises are committed to pay to the State 55 per cent enterprises income tax, in addition to products tax, local tax, added value tax, land tax, etc. Individuals are also subject to income tax if personal income is excessive to the state designated limit.

In 1978 when personal income tax system was first initiated, the Chinese government collected RMB Yuan 30 million from personal income tax, and this figure increased to RMB Yuan 1.270 billion in 1990, which triples the gross amount collected during the past 28 years preceding 1978. At present over 90 per cent of the national financial income is brought in through the tax agencies.

To promote enterprises' enthusiasm, the Chinese Government decided to reduce enterprise income tax from 55 per cent to 33 per cent, which will enter into force in 1993.

In regard to tax system guiding foreign ventures or Sino-foreign joint ventures, China promulgated foreign income tax law effective on 1 July 1991. The total foreign-funded ventures approved by the State reached over 34,000 in 1991 and generated about $US 1.3 billion of foreign tax income.

China will institute a series of tax reform measures in 1993, aiming to unify State taxation on personal income as well as the taxation of the income of domestic enterprises. A new taxation law on personal income taxation that will combine personal income tax, personal income regulatory tax and tax on the income of private business will be adopted in 1993. The law will apply to both Chinese citizens and foreigners on the Chinese mainland.

China will also take a decisive step in 1993 towards unifying the taxation on domestic enterprises to ensure competition among firms operating in different ownerships and management systems is equal.

To better carry out State industrial policy, China will readjust its turnover tax rate on certain industrial sectors while expanding the range of value-added taxes.

When the law on turnover taxation is promulgated, the present industrial-commercial consolidated tax for foreign-funded enterprises will be abolished and Chinese enterprises and foreign-funded ones will pay the same turnover taxes under the new law.

8. Reforms of the economic system over the past 11 years

Reforms in the past 11 years have started breaking the patterns of China's old economic structure while the framework of a new structure is gradually being formed. The reforms have brought about the changes in economic structure and pushed China's economic growth to 12.8 per cent in 1992 and gross domestic products (GDP) shot to $US420 billion. Industrial production, which accounted for about 42 per cent of the total GDP, grew by 20.8 per cent to reach $US177.4 billion, while agriculture production 24 per cent of GDP was up 3.7 per cent over 1991 at $US101 billion.

(a) Changes in ownership

A unitary state-ownership before 1979 is now being transformed into multi-forms of ownership with public ownership as a mainstay. The present multi-forms of ownership comprises state, collective, private and foreign owned ownership. From 1980 to 1991, the collective, private and foreign-funded economy increased from 45.5 per cent to 54.5 per cent in the total. While State-firms including large, medium and small ones dropped to 45.5 per cent in 1991 in the total industrial output value.

(b) Changes in enterprise management

Under the old system, enterprises had no decision-making power. Their plans were drawn up by the State, their raw materials and products, equipment, staff and funds were all allocated by the State, who was responsible for all profits and losses.

Enterprises are now have more say on finance, labour, material and equipment purchase, marketing and planning. The new management policies are as follows:

(a) A profit-retain system is introduced. Local governments are permitted to keep 10-15 per cent profit after tax, and enterprises, 44.6 per cent;

(b) The local governments and enterprises are empowered to market their products beyond the state quota and purchase raw materials with their own funds in the open markets;

(c) A contracted managerial responsibility system of various forms has been practiced in more than 90 per cent state-owned factories. Enterprises are responsible for their profits and losses and are committed to pay taxes to the State as part of finance reform.

(c) Changes in finance

Instead of loans being fully provided by the State, enterprises have, now, to pay interest for loans borrowed from banks. Monetary organs used to be the state financial cashier, are now operating on commercial basis: collecting funds, guiding flows, raising and regulating funds and social demands on funds. The financial allocation by the central government has considerably dropped, while bank loans have risen.

(d) Changes in centralization management

Since the reforms began in 1989, the central management has been decentralized in allocation, planning, budgeting and marketing of important materials.

The Chinese Government since 1990 has lifted its control on the retail prices of about 75 per cent of commodities on the domestic market. The number of industrial products controlled by mandatory State plans has dropped from 120 items in 1979 to 60; the variety of materials under centralized distribution dwindled from 256 to 27 in 1990; and the number of commodities directly managed by the Government also decreased from 188 to 24 by the end of 1991.

Now provinces and municipalities have their own budgets for revenue and expenditure. In addition, 10 big cities have been upgraded to enjoy economic management autonomy similar to the provinces.

Now the Chinese authorities have opened up markets for grain, steel, cement, wood, oils, cotton etc. for public trading. And these commodities used to be managed under the central control.

(e) Changes in foreign trade management

Foreign trade now is no longer monopolized by the central government. Localities and industrial enterprises have been allowed to organize trading corporations to conduct foreign trade within the line of their own products. Since 1990, the Chinese authority has canceled subsidies to foreign enterprises and corporations which are now responsible for profits and losses.

(f) Changes in science and technology management

Science and technology used to be controlled by the Government and were not allowed to be traded. The new policy has encouraged the transfer of patent rights and to open the market for trading science and technology. The promotion of the direct combination of science and technology with the transfer of patent has helped promote China's economy.

(g) Changes in cross-nation management

Enterprises and corporations are encouraged to form groups across the country to conduct management and trade activities. The conglomeration across nation and sectors of industries have made enterprises and corporations manage on a more efficient and flexible basis.

C. ECONOMIC PERFORMANCE

1. Development of major industries between 1980 and 1990

China obtained tremendous achievements in the 1980s, and these achievements are largely attributed to the reform and opening policy to the outside world. During the past 10 years between 1980-1990, the GNP had an increase of 136.0 per cent and national income, 130.7 per cent in 1990 over 1980.

In industry field, the total industrial output value in 1990 witnessed an increase by 363 per cent over that in 1980. Between 1980-1990, the output of coal rose from 620 million to 1,080 million tons, that of crude oil from 106 million to 138 million tons, electricity from 300.6 billion to 618 billion KWH, and steel from 27.12 to 66.04 tons.

(a) Textile industry

China is a world-famous and traditional textiles producing country. Textiles industry is the cornerstone of its national economy. In 1989, its output value and profit and taxes together accounted for one tenth of the national total and its textiles export, a quarter of the national total exports.

China's woolen and chemical fibre industries are the third and fourth biggest in the world, and its production scale of spinning machines, equipment, knitting and garment making are all among the largest in the world.

But the textile machines in use are half outmoulded and need to be modernized. About one-fourth of the total 30 million cotton spindles and 200,000 of 800,000 looms need to be replaced. To modernize textiles industry, the Chinese authority has decided to take three years to eliminate 3 million outmoulded spindles made before 1949. The first step is to modernize about one million spindles and looms. And technological renovation will take place mainly in 145 state-owned factories for cotton, wool, silk, garments and chemical fibre products and fabric for interior decoration. These factories form a national team to catch up with international standards.

Textile is one of the major foreign exchange earners. In 1991, the Chinese textile exports came up to nearly $US 15 billion and plans to top $US17.5 billion by the year 1995.

(b) Steel industry

China, the world's fourth largest steel producer, has produced 66 million tons of steel in 1990, among which, crude iron output was close to 62 million tons, rolled steel output over 51 million tons, cast iron output 16.9 million tons. In 1991, China churned out 70 million tons of steel products. The major producers are Capital (Shoudu), located in Beijing, Anshan (located in Liaoning province), Benxi (located in Liaoning province), Panshihua (located in Sichuan province), Wuhan (located in Hubei province) and Baotou (located in Gangsu province) Iron and Steel companies.

In 1992, China churned out a record 80 million tons of steel, and imported around 6 million tons of steel, by far the largest figure in recent years. The total output of domestic iron ore was 200 million tons in 1992.

Although China has made large investment in steel industry and the quantity of steel production has greatly increased in recent years, yet the quality of some kind of steel needs to be greatly upgraded. At present, about 60 per cent of rolled steel is behind the international standard, and some kinds of steel cannot fully meet the requirement in terms of quantity and quality.

According to the Chinese authorities, China, in the next five years, will focus on these sorts of steel: pipe steel for oil industry; steel for power station; steel for automobiles industry; galvanized steel and alloy steel; steel for light industry and civil use; steel for chemical industry as well as stainless steel, bearing steel and steel used for the electronics industry.

(c) Machine-making industry

The annual production capacity of China's automobile industry is about 650,000 with a variety of medium-duty, light-duty motor vehicles, mini-cars and vehicles for special purposes. In 1990, China turned out 516,000 automobiles and 970,000 motorcycles. The proportion of heavy-duty vehicles grew from 2.77 per cent to 3.54 per cent of the total annual output from 1989 to 1990; sedans, jeeps from 11.4 per cent to 13.39 per cent; medium-duty vehicles from 36.94 per cent to 40.18 per cent and the light-duty vehicles dropped from 33.2 per cent to 28 per cent.

China has imported key technology, equipment and parts from the United States, Germany and Italy and has set up joint venture with Germany and France to upgrade its automobile industry. Now China can make a variety of automobiles to meet most of the present domestic market needs and have exported small quantity to about 57 countries and regions.

(d) Coal and crude oil production

China is the world leader in coal production. Its coal output in 1990 reached 1.08 billion tons, ranking first in the world. In the past decade, the country constructed 220 new coal mines, increasing its annual coal production capacity by 175.63 million tons.

Coal is still China's main energy resources, accounting for 70 per cent of total energy consumption. The percentage is expected to hit 76 per cent by the year 2000.

The country's export volume of coal in 1990 was about 3.8 times that of 1980. Coal has become one of the 10 major exports of the country. At present, China has 7 million coal miners.

The country produced 142 million tons of crude oil in 1992.

(e) Major electrical appliance industry

In the past decade, China's household electrical appliance industry has made tremendous progress. China now is among the world's largest country in electrical appliance production in terms of production scale and output, its technology in some areas has reached the advanced world level. The significant achievements have allowed China to switch from an importer to an exporter of household electrical appliances.

To upgrade further its quality of products, China has, since 1979 spent several dozen billion RMB Yuan on introducing advanced technology from abroad, building many large and medium-sized electrical appliance enterprises. At present China has 1,000 household electrical appliance enterprises, including 20 big colour T.V. producers, 51 refrigerator plants, 42 washing machine factories and 100 cassette-tape recorder manufacturers. In 1990, refrigerator output amounted to 4.754 million, washing machines, 6.526 million and T.V. set output 26.62 million.

(f) Chemical production

Chemical production in China has achieved considerable success in recent 5 years. The production of basic chemicals are expanded, equipment and technology has been gradually advanced. In 1990, the total output value of the chemical industry reached RMB 75.786 billion yuan. Chemical fertilizer output reached 90 million tons in 1990, 4.1 per cent, up over previous year; pesticide was 18,000 tons, an increase of 9.5 per cent; soda ash output was 3.74 million tons, becoming the third-biggest producers in the world; caustic soda output, 3.3 million tons, up by 3.3 per cent; sulfuric acid, 11 million tons, up by 2.8 per cent; benzene up by 15.2 per cent, glacial acetic acid up by 20.8 per cent and concentrated nitric acid up by 1.3 per cent.

Over the last 5 years, China heavily invested in petro-chemical industry to increase its petrochemical products, some of which are still not enough to meet the domestic demand at present. In the meantime China warmly invites foreign investors to set up joint ventures for some key chemical industry.

2. Agricultural development between 1980 and 1990

Since 1979, a series of reforms have been carried out in the vast rural areas, including the institution of the household-contracted production system. Under this system, each household in rural areas has become a production unit with income closely linked to contribution made. Therefore, farmers double their efforts to raise productivity, and as a result, have promoted agricultural growth.

The total agricultural output value grew 84.6 per cent in 1990 over 1980, with an average annual growth of 6.3 per cent. The grain production increased from 327.1 million tons in 1980 to 393 million tons in 1990, cotton output more than doubled from 2.707 million tons to 4.00 million tons to make China the top producer in the world. The output of oil-bearing crops also went up from 7.9 million tons in 1980 to 14.20 million tons. the output of cash crops such as sugar and live-stock and aquatic products also grew by big margins.

To improve agricultural facilities, the Chinese Government has heavily invested in agriculture.

During 1983-1989, China invested RMB Yuan 1.9 billion for the programme and built 254 counties into bases for producing commodity grain, 74 for quality cotton, 113 for quality agricultural products, 278 for famous agricultural products, 490 for export agricultural products, and quite a few for commodity timber.

Statistics showed output of grain in 1992 at 440 million tons, 4.71 million tons more than 1991.

Stimulated by the fledging market economy, more farmers have switched to growing crops of high economic value and high quality, signaling a gradual readjustment of their agricultural production structure.

While planted acreage of grain in 1992 went down by 1.86 million hectares from 1991, acreage of cash crops increased more than 666,670 hectares.

China's agriculture and rural economy saw a rapid growth in 1992, with a total rural output value estimated at 2.37 trillion yuan ($394.3 billion).

Farmer's per capita income last year was expected to hit 760 yuan ($US127), 4 per cent more than 1991.

China would take more measures to establish a strong and well-founded agriculture and to keep a sound increase of farmers' income in 1993.

3. Economic performance in 1991

China's National Economic and Social Development achieved notable success in all sectors. Gross National Product (GNP) increased 7 per cent over 1990, including a 5.3 per cent increase in the service sector. The national income registered a gain of 7.2 per cent.

(a) Agricultural sector

Agricultural output value for 1991 increased 3 per cent over 1990. Grain output was 435.3 billion tons, cotton output was 5.66 million tons, both attaining the second highest yields in history. The output of oil-bearing crops, sugar-yielding crops and cured tobacco also reached new height. The production of meat, aquatic products, vegetables and fruit all showed considerable increases. Village and township enterprises continued to develop rapidly.

(b) Industrial sector

The total output value of industries across the country increased 14.2 per cent over 1990, with enterprises at the township level and above showing an increase of 12.9 per cent. Production of crude oil reached 139 million tons and raw coal, 1.09 billion tons, both slightly topping the previous year's output. Production of electricity reached 675 billion kwh, an increase of 8.7 per cent; production of steel reached 70.57 million tons, an increase of 6.4 per cent; and production of chemical fertilizer (counting only active ingredients) reached 19.88 million tons, an increase of 5.8 per cent; productivity of the entire workforce in state-owned industrial enterprises increased 6.2 per cent, profits and taxes from state-run industrial enterprises included in the budget increased 8 per cent and the turnover of state-allocated working capital was six days faster.

(c) Construction sector

The total investment in fixed assets was 527.9 billion yuan, an increase of 18.6 per cent over 1990. Included in this figure is 207.5 billion yuan invested in capital construction for state-owned units (including the purchases of vehicles, ships and aircraft), an increase of 21.8 per cent; 99.7 billion yuan invested in upgrading technology, an increase of 20.1 per cent; and 24.3 billion yuan invested in the construction of housing for sale, an increase of 31.1 per cent. The proportion invested in agriculture, transport and communications, and key raw and semi-finished materials increased slightly.

There were 182 key projects, which had been rationally scheduled, completed ahead of time and 100 large and medium-sized capital construction projects, 155 individual works in large and medium-sized projects and 115 high-investment category improvement projects put into operation. The main productive capacities made available by capital construction across the country for the year were represented by the following: the mining of 27.14 million tons of coal, generation of 11.84 million kw of electricity, 1,158 km of double-track and electrified rail lines and a handling capacity of 6.09 million tons of cargo at coastal ports. The proportion of investment made in technical improvements to reduce energy consumption, increase patterns and variety, raise product quality and bring the "three wastes") pollution from gaseous, liquid or solid wastes) under control increased from 27.1 per cent to 29.9 per cent.

(d) Commercial sector

The total value of retail sales for the year rose 13.2 per cent over the previous year's figure, or 10 per cent when adjusted for inflation. Total retail sales of consumer items in urban and rural markets were up 16.1 per cent and 10.4 per cent respectively over the previous year. Inflation of retail prices for the year was only 2.9 per cent. Due to the increased selling prices of grain and cooking oil to urban residents and increases in certain service fees and other factors, daily living expenses for workers and office staff in 35 large and medium-sized cities rose 8 per cent over 1990.

4. Major economic tasks in China's 1992 plan

On the basis of vigorous structural readjustment and improved performance of the economy, China's plan calls for a 6 per cent rise in the gross national product (GNP), including a 7.2 per cent rise in the service sector. However, GNP in 1992 showed an actual increase of 12.8 per cent over the previous year. The major targets and tasks set in the 1992 plan are:

(a) *Investment and major industrial products.* The plan sets total investment in fixed assets for the whole society at 570 billion yuan, an increase of 8 per cent over last year. Breaking this down, investment of fixed assets in state-owned enterprises and institutions will come to 387 billion yuan, investment in collective-owned enterprises and institutions will come to 67.5 billion yuan and investment by individuals in both urban and rural areas will come to 115.5 billion yuan. Of the total investment in state-owned enterprises and institutions, 202 billion yuan will go to capital construction, 110 billion yuan to updating of technology, 6.5 billion yuan for the purchases of vehicles, ships and aircraft, and 68.5 billion yuan to housing for sale and other purposes.

The plan calls for capital construction to add the following industrial capacity: output of raw coal, 25.36 million tons; crude oil, 13 million tons; installed capacity of electricity, 8.63 million kw; ethylene, 115,000 tons; newly built railway lines put into operation, 630 kilometres; electrified and double-track railway lines, 1,172 kilometres; volume of freight handled at coastal ports, 28.19 million tons; and storage capacity for grain, 1.55 million tons.

To make great efforts to save natural resources and make full use of them. The amount of energy saved for the year would total the equivalent of 20 million tons of standard coal and the amount of timber saved by economization and substitution would come to 15 million cubic metres. According to planned figures for the output of major industrial products and the transport industry, raw coal output would reach 1,100 million tons, 490 million tons of which is to come from coal mines whose products are solely distributed by the state; crude oil should reach 140.5 million tons; electricity, 705 billion kwh; steel, 71 million tons; railway freight, 14.7 billion to 1.48 billion tons; and water transport haulage under the direct administration of the Ministry of Communications, 270 million to 280 million tons.

(b) *Agricultural production.* The plan calls for grain production to reach 435 million tons, cotton 4.75 million tons, oil-bearing crops 16.5 million tons, meat 31 million tons and aquatic products 13.5 million tons.

(c) *Improving economic restructuring and efficiency.* In 1992, China shall actively promote structural readjustment. This includes rational restructuring of the primary, secondary and tertiary industries, restructuring within industries, restructuring of the product mix, enterprise organization, and the geographical distribution of industries among the local economies, in addition to coordinating the relationship between economic and social development.

Major targets and requirements for readjustment of the industrial structure and improvement of economic performance this year are as follows:

(1) vigorously expand domestic and international markets and increase production of readily marketable and profitable products as well as actively develop new products and continue to maintain steady growth in energy, major raw and semi-finished materials, transport and telecommunications.

(2) organize production in light of market demand, not allowing supply to exceed demand and restricting production of unmarketable products to avoid building up new stockpiles.

(3) continue the readjustment of the product mix and enterprise structure, urging those enterprises with excessive production capacity or which turn out unmarketable products and are unable to make up losses to merge with others, to shift to a different line of production or close down temporarily.

(4) work hard to improve product quality and continue to improve the specifications of products and strive to reach or exceed former quality records, aiming for international standards for some products. Severely crack down on the manufacture and sale of counterfeit and shoddy commodities.

(d) *More open policy in attracting foreign funds.* In 1992, China continues to make efforts in running the existing special economic zones, economic and technological development districts, open cities and open regions, enabling them to make use of still more foreign funds, develop at a higher speed. At the same time, China accelerates the development and opening-up of the New Pudong District in Shanghai. The State Council has decided that the districts are given greater support in terms of funds, loans, use of foreign exchange, financial and taxation policies, and greater power for examining and approving construction projects. The land-locked border areas and minority nationality areas will also be opened wider to the outside world and border trade and other forms of economic and technological exchange and cooperation with other countries will be greatly expanded. China would make use of foreign funds more boldly, fervently and effectively, especially in better absorbing direct investments from foreign entrepreneurs to open more joint ventures, cooperative enterprises and wholly foreign-funded enterprises, and continue to expand the scope of utilization of foreign funds, improve the investment environment and provide better guidance for orienting foreign investment and encourage more high-technology and export-oriented projects in line with the State's industrial policies.

(e) *Improving product quality.* China is determined to make great efforts in improving the quality of products and reducing consumption of resources, to encourage wider application of up-to-date practical scientific and technological advances and expand the use of electronic technology in every trade and professions.

5. Rural enterprises

Rural enterprises in villages and towns are mainly collectively owned. In 1989 there were nearly 1.5 million village enterprises across the country with a total output value of RMB Yuan 473.5 billion, accounting for 20 per cent of the total social output value of the country and 39.2 per cent of the total social output value of rural China. In 1992 the total rural industrial output value surpassed 1 trillion yuan. Meanwhile, other rural sectors such as commerce, construciton and transportation also withnessed rapid development in 1992.

Rural enterprises have become a main outlet for the surplus labour in the countryside. In 1989 they had a total employment of 92 million people, or half of the total surplus labour in rural China and a major source of income for farmers. The wages of employees in these enterprises and profits allocated to farmers have totalled more than RMB Yuan 400 billion in the past 10 years, about one quarter of the farmer's net income. In recent four years more than half of the net income of the farmers have come from rural enterprises.

Rural enterprises have also become a vigorous force in earning foreign exchange through export. Between 1984 and 1989 they earned a total of $US 35 billion. In 1989 alone, earnings were more than $US 10 billion, 23 per cent of the country's total.

It is predicted that rural industrial output value would account for 40 per cent of the total output value and 35 per cent of the total gross social output value by the year 2000.

6. Private economy

In recent years, the private economy in China has developed at an amazing speed and become a force which cannot be ignored. In 1978, China had only 150,000 self-employed people, but by June 1992 it increased to 21 million. There are more than 100,000 private enterprises employing more than 2 million people by mid 1992. With the growth of private enterprises, the registered funds to be used in business of the self-employed in China totalled about 460 million yuan ($US 84 million), or 250 yuan ($US 45) per capita in 1980, and reached more than 40 billion yuan ($US 7 billion) - a per capita ratio of 3,000 yuan ($US 550) in early 1992.

Some private enterprises have annual sales of more than 10 million yuan ($US 1.8 million). A few private enterprises have annual sales of more than 100 million yuan ($US 18 million).

In early 1992, retail sales of the self-employed reached 160 billion yuan ($US 30 billion), or about 20 per cent of China's total retail sales. The industrial production value of individual enterprises reached 129 billion yuan ($US 23 billion), or about 5.4 per cent of the total industrial production value in China.

In early 1980s, the private economy dealt only with commodities at the distributing channel, including trades of running restaurants, hotels, repair-shops etc. It now has expanded to enter into sectors of industries, communications, transportation, construction, culture and entertainment as well as science and technology development.

Urban and rural youths with better education are the mainstream of private economy. A large number of people who have some professional knowledge and skills have resigned from their jobs in State units to enter into the private sector.

D. GOALS OF CHINA'S 8TH FIVE-YEAR PLAN

1. Major economic tasks in the 1990s

The Chinese authorities approved on 9 April 1991 its 8th Five-Year Plan for national economic and social development in the next few years.

(a) GNP growth

By 1995 the gross national product (GNP) will reach RMB Yuan 2,325 billion yuan, as calculated in the 1990 prices, about 33.6 per cent increase over 1990, and an average annual growth rate of 6 per cent. The national income will reach RMB Yuan 1,825 billion yuan, 27.6 per cent more than the RMB Yuan 1,430 billion in 1990, or an average annual increase of 5 per cent. In the next five years, a total of RMB Yuan 8,105 billion in national income will be used and the state investment in fixed assets will be set at RMB Yuan 2,600 billion which averages 5.7 per cent increase annually, not including price increase factor.

(b) Industrial output

By 1995 industrial output value will be 37.1 per cent more than in 1990, an annual growth rate of 6.5 per cent. The added value of the tertiary industry in 1995 will come up to 53.9 per cent more than in 1990, or an average annual growth of 9 per cent.

For energy industry, coal output will increase from 1.09 billion tons in 1990 to 1.23 billion tons in 1995, crude oil from 138 million tons to 145 million tons; energy generation from 615 billion kwh to 810 billion kwh.

For electronics industry, effort will be concentrated on the development of mass integrated circuit and computer based electronic products; micro-electronic technology, computer and softwares and sensors, reconstructions of traditional industries with advanced electronic technology and the development of new electronic products, consumer electronic products and telecom products in the fields of photo-communication, satellite and microwave.

For transportation, investment will be mainly put in railway, the volume of rail freight will increase from 1.46 billion tons in 1990 to 1.65 billion tons in 1995; water and highway transportation will also be expanded and upgraded.

For machinery industry, the emphasis is put on product quality and application of advanced technology. China will turn to produce whole sets of equipment, machines for energy industry, transportation, telecommunications and agriculture as well as import substitutes.

For light and textile industries, China will increase the production of processed materials, especially synthetic fibers, detergents, raw materials for paper-making. The coastal areas and major cities would produce more and more deep processed or technology-intensive or export-oriented products.

Yarn output is set to increase from 24.5 million units in 1990 to 27 million in 1995 and 31 million in 2000, chemical fiber from 1.55 million tons in 1990 to 2 million tons in 1995 and 2.6 million tons in 2000.

For raw materials, greater attention will be paid to develop important materials. Iron and steel will be upgraded and production will be set to increase from 65 million tons in 1990 to 72 million tons in 1995; chemical fertilizer output, 90 million tons to 100 million tons; ethylene, from 1.5 million tons to 2.3 million tons; aluminum, particularly aluminum oxide will be given top priority in the non-ferrous metals industry.

The total agricultural output value will go up to RMB Yuan 878 billion, an increase of 18.9 per cent over 1990, or an average increase of 3.5 per cent.

By 1995, the grain output will target 447 million tons; cotton, 4.64 million tons; oil-bearing crops, 17.26 million tons; sugar-bearing crops, 73.2 million tons; meat output, 30 million tons.

Twenty-five hectares of land will be forested, 12 million hectares of hillsides will be closed off in order to facilitate afforestation and 18 million hectares of forests will be added to increase national forest cover from present 12.9 per cent to about 14 per cent. And shelter belt in northeast, north and northwest China as well as on the upper and middle reaches of Yangtze River will be constructed into farmland and project basis.

2. Major tasks for economic reforms in the 1990s

The Chinese authority has made public its determination to move deeper and faster reforms in 1990s.

The economic reforms in the 1990s focus on the following aspects:

(1) To establish an ownership structure with diverse economics while maintain the state ownership of infrastructures, capital industries, large enterprises and key public works, individual and private economies are further encouraged with emphasis on labour-intensive, commercial enterprises and service sectors as well as small-scale enterprises and commerce. In the meantime, the development of joint ventures and wholly-owned enterprises by foreign investors are vigorously promoted.

(2) To establish an enterprise system suitable for socialized mass production and facilitating sound economic development.

Based on the present granted autonomy, enterprises would be further given autonomy in production and management to become independent producers and managers. Therefore the responsibility system responsible for profits and losses will be made perfect gradually.

Organizational structure will be promoted, covering contracting, leasing, merging, stock-holding and other horizontal cooperative agreements among enterprises.

Large-and-medium-sized state owned enterprises with the necessary conditions would be transformed into shareholding ones with legal persons representing public ownership as the main body, of them, the majority would be limited liability corporations, while a few qualified ones may be turned into shareholding limited corporations.

A profit-submitting responsibility system would be strengthened and separate profit from tax, repayment of loan after tax and contractual responsibility after tax.

(3) To establish a unified, open and comprehensive market system. Commodities under the mandatory control would be further reduced and be put on market circulation for free competition, except for prices of energy, transportation, telecommunication and staple agricultural products which will still be controlled by the State.

In order to establish a rational pricing mechanism, price for energy, transportation and major raw materials would be adjusted and a parity price between agricultural and industrial products and capital and manufactured products.

Planning method will be worked out to reflect laws of value and directory plan will be further cut down and gradually be replaced by guidance plan and market regulation, except for some important items.

(4) To establish a labour management system. An employment policy would be introduced. Under the policy, jobs arranged by the State will be changed into a labour contract system which will allow the enterprises to relocate and dismiss workers according to labour law and production needs. Labour force can also flow and workers are entitled to choose their job. In the meantime, wage structure based on performance and contribution will be applied.

(5) To establish a monetary system. The current revenue-submitting system and financial contractual responsibility system have hampered the rational financial role of macro-control. A fair and rational package of taxes would be gradually standardized and perfected. The financial relations between central and local governments will be transformed from present revenue-submitting (or financial contractual responsibility) into a rational and standardized one. The central bank, instead of being a cashier, would exercise the control over the supply currency, credit scale, reserve funds, refinancing, interest rates, issuing and withdrawing of bonds etc. Monetary modes will include bonds, shares, housing deposits and loans etc.

(6) To establish a fair competition in foreign trade. Industrial enterprises and foreign trade corporations are put on fair competition and more and more industrial enterprises will be granted power to conduct foreign trade.

III. FOREIGN TRADE

A. TRENDS AND PATTERNS

1. Trends

Foreign trade in China, on the one hand, reflects the performance of the country's whole economic development, and on the other, constitutes an important factor in the strategy influencing its economic growth.

China's economic development during the period from 1960-1984 can be classified into three stages, during which its foreign trade experienced three major ups and downs.

During the years from 1960-1970, China's economic development registered a growth rate of only 3.5 per cent on average. Its imports and exports in the same period grew respectively at 1.8 and 2 per cent. Before 1972, China's foreign trade value stood below $US 6.4 billion, which is small for a country like China. In the years between 1970-1977, the Chinese authorities took measures to correct the excessively high rate of accumulation, paid attention to the improvement of people's living standard and emphasized economic development. As a result, the growth rate of the economy averaged 6.1 per cent. In turn, the average growth rate of imports and exports during the same period represented 21.8 and 19.3 per cent respectively. Since the late 1970s, China has adopted an open-door policy and modernization programme. China's foreign trade has been emphasized and boosted to promote the country's modernization, and the new course of rapid development has begun. The total value of foreign trade soared to $US 29.4 billion in 1979 from $US 4.6 billion in 1970 and further rose to $US 53.63 billion in 1984. Its exports in 1981 grew to $US 20.9 billion, pushing its share in the total world exports above 1 per cent for the first time; and the exports further rose to $US 26 billion in 1984. Its share in the total world export rose to about 1.25 per cent, ranking sixteenth among the world export countries. Because of the expansion of imported essential materials, advanced technology, complete sets of equipment and certain consumer goods, imports in 1984 reached $US 27.67 billion, registering a trade deficit of $US 1.7 billion for the first time during 1981-1984.

During the 7th Five-Year Plan, the scale of China's technology import and export continued to be expanded. About 3,000 technology import contracts were approved by The Ministry of Foreign Trade and Economic Cooperation (MOFTEC), and its authorized local institutions, which were valued over $US 15 billion, and were respectively 0.5 and 1 times of those of the 6th Five-Year Plan. Export of technology developed more rapidly. During the five years, MOFTEC approved technology export contracts numbered 648, whose value totaled $US 2.2 billion which opened up a new prospect.

Over the past two years of 1990 and 1991, China's import and export grew considerably with import registered in 1991 at $US 63.9 billion, up by 19.5 per cent and with export registered at $US 71.91 billion, up by 15.8 per cent over 1990. The foreign trade surplus in 1991 amounted to about $US 8 billion. Because of foreign trade surplus running in 1990 and 1991, China's foreign exchange reserves accumulated to $US 40 billion by 1991.

In 1992, the total import and export volume of the country reached $US165.63 billion, an increase of 22.1 per cent over the previous year. Of this, exports stood at $US85 billion and imports at $US80.63 billion, up 18.3 per cent and 26.4 per cent respectively. China's foreign trade in terms of volume among major countries and regions in the world ranked fifteenth in 1991 and eleventh in 1992.

China's developing market economy is expected to give a new impetus to foreign trade and open more areas such as banking, commerce, tourism and real estate for overseas investment. It was predicted that 1993 would see a quicker reform of the nation's foreign economic and trade system, and China's total import volume may surpass $US300 billion in the Eighth Five-Year Plan period (1991-1995).

Imports in the next few years will focus on products in such fields as water conservancy projects, chemical fertilizers, pesticides, raw materials, transportation and telecommunications; and advanced technology and equipment are also included to meet the needs for updating the nation's industrial enterprises. In order to increase imports, China has drastically reduced some tariff rates and accelerated reforms on the import control system. With the further deepening of China's reform of the foreign trade regime, foreign products will have more access to the Chinese market.

2. Commodity structure

Before 1949, China's foreign trade pattern was similar to that of under-developed countries in the nineteenth century. It imported consumer and capital goods and exported raw materials. Before 1949, consumer goods accounted for about 90 per cent of the total imports and means of production (producer goods) for only 8 per cent. After China began economic restoration in 1950, the composition of imports and exports was drastically changed with means of production accounting for 90 per cent in the total imports. The adjustment and modernization programmes shifted the import emphasis to capital goods, advanced technology, machinery, complete plants and raw materials for the development of light and textile industries.

In 1979, 80 per cent of China's foreign currency was spent on imports of means of production. Of this, 25 per cent was for complete plants, new technology, machinery, electrical appliances, instruments and apparatus (e.g. complete sets of plants for the oil, metallurgical, coal and chemical fertilizer industries, machine tools and instruments and machines for the light and textile industries); 50 per cent for raw materials such as steel, non-ferrous metals, rare metals, ores, chemicals, timber, wool and cotton; and the remaining 6 per cent and 19 per cent for the means of production for agricultural production and livelihood respectively. In 1990, commodities of means of production accounted for over 80 per cent.

China's export commodities from 1949 to 1977 were mostly farm and sideline products and their processed products, while industrial exports, especially heavy industrial exports were small, accounting for about 10 per cent on average in the total trade. The proportion of primary products in the Chinese exports dropped from 79.4 per cent in 1950 to 46.2 per cent in 1984. The share of manufactured goods rose from 20.6 to 53.8 per cent in the same period.

During the 7th Five-Year Plan, the structure of import and export commodities were further changed. The proportion of finished industrial products in export volume raised 20.4 percentage point in the 7th Five-Year Plan over the 6th Five-Year Plan; advanced technology, key equipments and major materials indispensable for domestic production and construction accounted for about 80 per cent of the total import.

In 1990, the composition of import and export commodities continued to be improved. The proportion of industrial manufactured products reached 66.2 per cent, an increase of 1 percentage point over the year before. Of export of industrial manufactured products, export of deeply-processed and high value-added products increased promptly with their proportion. In 1992, the exports of manufactured goods accounted for 79.9 per cent of the total export volume.

3. Trading partners

Before 1979, China traded mainly with the Russian Federation and East European countries. Since 1970, the market economics have been China's major trading partners, accounting for 80 per cent of the country's imports, with a share of about 87 per cent in 1979.

In 1977, the share of China's foreign trade with the developed countries accounted for about 44 per cent, with the developing countries and regions for 13.4 per cent and with the Russian Federation and other Eastern European countries for 6.8 per cent. The needs for imports of advanced technology and equipment has increased the share with the developed countries since 1978.

By the end of 1992 China has established trade relations with 221 countries and regions and signed government-to-government trade agreements or protocols with 95 countries. Japan, Hong Kong, EC, the United States, Canada, Australia, ASEAN countries, the Republic of Korea and the Russian Federation are China's major trading partners.

(a) Sino-Japanese trade

Japan is the closest neighbor to China, and has long-standing trade relations with the country. The improvements of the relations between the two countries have accelerated the two-way trade. According to the business statistics of the Ministry of Foreign Trade and Economic Cooperation (MOFTEC), the import and export value in 1990 between China and Japan was $US 12.927 billion, a decrease of 11.84 per cent over 1989. China's export to Japan came to $US 8.871 billion, an increase of 8.89 per cent over 1989; while the import was $US 4.055 billion, a decrease of 37.77 per cent. China had a favourable balance of $US 4.816 billion. China's main exports to Japan were: 13.96 million tons of crude oil, valued at $US 2.34 billion, up 2.64 per cent and 41.04 per cent over 1989 respectively; textiles, valued at $US 680 million, down 15 per cent; garments, valued at $US 627 million, up 6.81 per cent; aquatic products, valued at $US 492 million, up 7.19 per cent; oil products, valued at $US 311 million, up to 10.28 per cent; animal by-products, valued at $US 240 million, down 10.11 per cent; cereals, valued at $US 141 million, down 28.06 per cent; coal, valued at $US 227 million, up 18.23 per cent; vegetables, valued at $US 160 million, down 16.23 per cent; arts and crafts, valued at $US 175 million, down 4.89 per cent; light industrial products, valued at $US 219 million, up 28.2 per cent; Chinese crude drugs, valued at $US 100 million, down 5.66 per cent; timber, valued at $US 125 million, up 19.05 per cent. China's main imports in 1990 from Japan included: 1.84 million tons of steel products, valued at $US 1.075 billion, down 52.3 per cent and 53.48 per cent over 1989 respectively; complete sets of equipment and technologies, valued at $US 506 million, down 47.29 per cent; petro-chemicals valued at $US 587 million, down 26.26 per cent; machineries valued at $US 539 million down 23.34 per cent (in which, automobiles and motor-cycles, valued at $US 166 million, down 10.27 per cent); light industrial products valued at $US 375 million, down 45.18 per cent (in which, household electric appliances valued at $US 33 million, down 60.24 per cent; TV sets and audio equipments, valued at $US 215 million, down 53.76 per cent); textiles valued at $US 295 million, down 15.23 per cent; instruments and apparatus, valued at $US 340 million, up 3.98 per cent.

(b) Sino-United States trade

After the establishment of diplomatic relations in January 1979, the United States and the People's Republic of China concluded an overall trade agreement followed by agreements in a number of areas, including textiles, aviation, maritime relations, grain trade etc.

In 1983, two-way trade was significantly affected by the textile quotas imposed by the United States which led to the drastic decrease of China's import of cotton, synthetic fibres, and soyabeans and wheat from the United States. With the signing of the textile agreement in August 1983 and improving relations between the two countries, and liberalizing export controls over sophisticated equipment and advanced technology, the trade between them soared to $US 6.47 billion in 1984, a considerable rise over that of 1983, representing a 12.1 per cent share of China's total trade.

In 1990, the total value of trade between China and the Untied States was $US 9.808 billion, down 1.81 per cent over 1989, of which China imported $US 4.993 billion, down 18.44 per cent and exported $US 4.815 billion, up 24.48 per cent. The United States remained China's third largest trading partner. The year 1991 saw China's import from the United States being adversely affected by reasons like adjustment in China's internal economy and sluggishness in the domestic market on the one hand and the on-going U.S. "economic sanctions" against China on the other. As a result, all staple imports but machinery suffered decline, and China's import of complete sets of equipment and technology in particular fell by as much as 37.5 per cent. In 1991, imports fell to $US 8 billion. The Chinese Government was very concerned about the import decline, and in October sent a Buying Mission to the United States and concluded at contractual value of $US 700 million worth of American goods.

In 1991, China's traditional staple exports to the United States increased to $US 6.2 billion, of which the commodities that rose by a greater margin over the previous year included grain, oils and foodstuffs, up 34.4 per cent, animal by-products, up 21.6 per cent, garments, up 37.9 per cent, drawn-works, up 19.9 per cent, light industrial products, up 69.7 per cent, arts and crafts up 21.2 per cent, crude oil, up 29.3 per cent, machinery and equipment, up 60.7 per cent.

Since China and the United States established diplomatic relations, the bilateral trade has witnessed rapid expansion. From short as well as long point of view, there exists great potential for the two countries to further develop bilateral trade. China needs American technologies, capital and market, and the United States needs Chinese market and fine products with reasonable prices. Each year China imports from the United States large quantities of wheat, cotton, fertilizers, timber, paper pulp, technical equipment and aircrafts, etc. while the United States imports from China is also seen year-by-year growth in products like garments, textiles, grain and oils, native produce, chemicals, and machinery and electric products. Besides, seen from the bilateral trade volume, the share of the year's American trade volume with China accounted for a mere 2.2 per cent in its overall foreign trade volume, of which import from China took up a mere 1 per cent in its overall import and export a mere 1.6 per cent in its overall export.

(c) Sino-EC trade

In 1990, the total import and export trade volume between China and the 12 member countries of the European Community stood at $US 9.901 billion, a drop of 5.4 per cent compared with 1989, accounting for 11.6 per cent of China's total foreign trade volume (a slight decrease of 12.8 per cent over 1989). Of the total, China's export value was $US 5.07 billion, up 16.6 per cent over 1989, making up 9.7 per cent of China's total export in 1990; China's import value was $US 4.83 billion, down 21.1 per cent over 1989, making up 14.6 per cent of China's total import in 1990. For the first time in many years China had a trade surplus with the European Community, amounting to $US 240 million. In China's trade with the EC countries, trade with the former Federal Republic of Germany (excluding the former Democratic Republic of Germany) ranked the first with a total of $US 3.533 billion, a drop of 11.4 per cent compared with the previous year; then came France, Britain and Italy, the bilateral trade volume respectively being $US 1.847 billion with an increase of 4.3 per cent,

$US 1.533 billion with an increase of 6.1 per cent and $US 1.236 billion with a drop of 27.0 per cent; trade with Holland, Belgium, Spain and Denmark respectively was $US 732 million, $US 362 million, $US 329 million and $US 193 million, trade with Greece, Portugal, Ireland and Luxembourg respectively was $US 86.71 million, $US 22.67 million, $US 16.99 million and $US 9.96 million respectively. In 1991 China's imports from EC further decreased to $US 8.4 billion.

China's exports towards the European Community were mainly the traditional bulk commodities, of which textiles and garments made up 15.9 per cent of the total; native produce and animal by-products, tea, and spices made up 11.4 per cent; cereals, oils and foodstuffs made up 11.2 per cent; light industrial products made up 9.6 per cent; arts and crafts made up 6.6 per cent; medicines and health products made up 5 per cent; chemicals made up 4.8 per cent; drawn-works made up 3.6 per cent; silk made up 2.2 per cent; coal made up 2 per cent, non-ferrous metals made up 1.7 per cent. As for the composition of export commodities, manufactured products such as light industrial products, machinery and equipment, medicines and ships accounted for a higher proportion of China's total exports compared with the previous year.

Of China's major imports from the European Community, technology and complete sets of equipment, machinery, electronic products and instruments made up more than a half of the total; chemicals made up 8.1 per cent; steel products made up 5.5 per cent; cereals made up 6.5 per cent; fertilizers made up 4.69 per cent; synthetic fibres made up 3.1 per cent.

China's modernization drive is likely to promote China's imports from the EC of industrial raw materials and advanced technology.

(d) Trade with ASEAN

The six ASEAN nations – Indonesia, the Philippines, Malaysia, Singapore, Thailand and Brunei Darussalam – are China's neighbours as well as important trade partners.

Since the 1970s, China's export to the ASEAN countries has grown rapidly. Between 1975 and 1989, for example, the value of China's exports to the ASEAN countries rose from $US 402 million to $US 3,027 million.

ASEAN occupies a fairly important position in China's export trade. For many years, Singapore has been China's fourth largest export market after Hong Kong, Japan and the Untied States. Other ASEAN nations rank among the front in China's export markets.

However, China's exports to ASEAN nations have been increasing at a rate lower than that of China's imports from the ASEAN nations. Between 1975 and 1989, for example, the average annual growth rate of China's exports to the ASEAN countries was 15.5 per cent, while that of China's imports from the ASEAN nations was 27.4 per cent. In the past, China enjoyed a long term trade surplus with ASEAN but, in recent years the value of trade surplus has dwindled gradually. In 1988 China suffered a trade deficit of $US 230 million. The figure rose further to $US 593 million, in 1989. Therefore, expanding China's exports to the ASEAN nations to avoid the further expansion of trade deficits is a new question facing both sides.

The large numbers of foreigners with Chinese origin and overseas Chinese will continue to play an important role. Over the past centuries, many Chinese have gone to Southeast Asia to make a living and settle down there. They have been in harmony with local people and worked for the economic prosperity of the countries concerned. Most of them have become citizens of the countries concerned while some of them still retain Chinese citizenship.

In 1990, China's export to ASEAN countries came to $US4,135 million while imports reached $US 3,894 million. Most of the export commodities of ASEAN countries are primary products. For instance, Malaysia mainly exports natural rubber and palm oil to China, Philippines and Thailand mainly export coconut oil, natural rubber and sugar. China also exports primary products to ASEAN countries. For example China exports petroleum to Thailand, rice to Malaysia and Singapore. But the primary products exported by China do not constitute a fierce competition to the primary products of ASEAN countries. On the contrary, with the speeding up of China's industrialization, the demand for primary products from ASEAN countries will increase. It is estimated that the trade between China and ASEAN countries will grow further in the late 1990s.

The Chinese Government has reiterated time and again that China's policy of reform and opening to the outside world would be pursued unswervingly no matter what changes take place in the world. A very good foundation has been laid for China to strengthen its economic exchanges and cooperation with Asia-Pacific region. Now the Chinese Government is drafting the 8th Five-Year Plan and the programme for the last decade of this century, which is the important period for China to realize the second step for national economic and social development. During this period, China will maintain sustained, stable and coordinated development of the national economy. On the other hand, China will make efforts to improve the international environment and enhance economic cooperation and exchanges with the outside world, particularly with the Asia-Pacific countries and regions.

(e) *Trade with Hong Kong and Macau*

Trade between China's mainland and Hong Kong and Macau got a steady development in 1991. According to the business statistics of Ministry of Foreign Economic Relations and Trade, the total value between China's mainland and Hong Kong in 1991 hit $US 49.6 billion, a big increase over the previous year, representing 46 per cent of the total national trade value. Hong Kong has been the largest trade partner of China's mainland for four consecutive years. The total trade value between China's mainland and Macau amounted to $US 690 million, up by 30 per cent over 1990.

(f) *Trade with selected ESCAP members in the Asian and Pacific region*

Bangladesh

Bangladesh exports to China are jute, jute goods, hides and skins, newsprint and pulp and tobacco. Of them, jute and tobacco are the major items. The trade between the two countries grew from $US 76 million in 1979 to $US 104 million in 1980 and further to $US 213 million in 1991.

Myanmar

From Myanmar, China's major import is rice. China also buys timber, black maple, etc. from Myanmar. Its trade with Myanmar increased from $US 13 million in 1979 to $US 53 million in 1981 and $US 392 million in 1991.

India

The major items that China imports from India are pipes and tubes, electric components, wire ropes and other wire products, electric control gear and switchgear, small tools and bicycle parts. China's exports to India are mainly mercury, zinc, antimony metals, asbestos, etc. The trade value between the two countries is small, stood only at $US 64 million in 1984 and $US 135 million in 1991.

Malaysia

In recent years, especially since diplomatic ties were established in 1974, the trade between China and Malaysia has grown to the point where by 1978 and 1979 China ranked ninth in terms of Malaysian trade turnover (after Japan, the United States, Singapore, the United Kingdom, Germany, Australia, the Netherlands and Thailand). In 1984, China's total trade with the country reached $US 420 million, and $US 1.3 billion in 1991.

Natural rubber and palm oil are the biggest items that China imports from Malaysia. Timber, logs and palm products are also major items Malaysia exports to China.

Manufactured items imported from China by Malaysia are iron and steel goods (wires, nails, coils and plates), which make up the most valuable group. Woven cotton fabrics, paper and paper-board, soap and pottery items, pharmaceutical, inedible crude materials and mineral fuel also future in China's exports to Malaysia.

Nepal

Nepal sells to China linseed, tobacco, hides, goat skins, medicinal herbs, shoes and sandals. The two-way trade between China and Nepal stood at around $US 34 million in 1991.

Pacific islands

The major commodities China purchases from these island countries are cocoa beans, copper concentrates, logs and timber and wood chips.

Pakistan

The two-way trade between China and Pakistan in 1980 stood at $US 310 million, double the 1979 value. It continued to increase to $US 562 million in 1981, with Pakistan enjoying a substantial surplus. In 1984, China's imports and exports with the country again decreased to $US 310 million. Pakistan is China's major raw cotton supplier in the region. In addition, China buys cotton yarn, cotton fabrics, hides and leather, made-up articles of textile materials, footwear, etc. Sino-Pakistan trade volume in 1992 was $US 687 million.

Philippines

China and the Philippines signed a government trade agreement in 1975, soon after they established diplomatic ties. Since then two-way trade has accelerated steadily from nearly $US 100 million in 1979 to $US 182 million in 1979. It then jumped to $US 326 million in 1980, a rise of 80.4 per cent over the 1979 level. It registered $US 377.2 million in 1981, and $US 384 million in 1991.

Crude oil is China's biggest export item. Other major exports include machinery, metals, minerals, textiles and foodstuffs. Chinese imports are largely copper concentrates, raw sugar, timber and coconut oil.

Singapore

There are no diplomatic ties between China and Singapore, but trade between them started as early as the 1960s. In 1977, China's trade with Singapore was already valued at $US 400 million. It grew steadily to $US 610 million in 1980, $US 792.3 million in 1981, and 3.1 billion in 1991.

China's imports from Singapore include drilling rigs, rolled steel, chemicals, insecticides, patent medicines and raw chemical materials. Of them, drilling rigs are the biggest Chinese import item in value terms. China's exports are cotton textiles, crude drugs, Chinese medicine, canned food, paper, fresh and dried vegetables and fruits, ceramics, porcelain, machine tools and hardware. The establishment of diplomatic relation in 1990 has promoted bilateral trade relations.

Sri Lanka

Early in 1952 the Governments of China and Sri Lanka signed a trade agreement for rice and rubber. Under the agreement, Sri Lanka expected to China natural rubber in exchange for Chinese rice. This accounted for a large portion in Sino-Sri Lankan trade. In addition, China buys areca nuts, sesame seed, tea and coconut oil. The two-way trade reached $US 133 million in 1980, but declined to around $US 95 million in 1984, and $US 123 million in 1991.

Thailand

China imports from Thailand mainly raw sugar, rice, maize, mung beans, natural rubber, tobacco leaves and medicinal herbs. China's export are crude oil, oil products, machinery and light industrial goods. The trade between the two countries has developed rapidly in the past few years. Their total trade value in 1977 which registered only $US 170 million, rose to $US 294 million in 1979 and then accelerated to $US 451 million in 1980, 2.6 times the level in 1977.

The two-way trade deciines to $US 391 million in 1981, owing to reduced crude oil imports from China, and again went up to $US 460 million in 1984, and reached $US 1,269 million in 1991.

Republic of Korea

During mid 1970s, the Republic of Korea had indirect trade with China. In 1989 the two-way trade exceeded $US 3.1 billion. On 20 October 1990, the China Chamber of International Commerce and the Republic of Korea Trade Promotion Corporation signed an agreement in Beijing to establish representative offices in Beijing and Seoul. This is bound to enhance non-governmental economic and trade relations between the two countries. The bilateral trade between China and the Republic of Korea has expanded since the two countries established diplomatic relations in 1992.

(g) Trade with the Russian Federation and East European countries

Trade relations between China and the former Soviet Union had a long history. Two-way trade was mainly conducted on an open-account basis. In the early 1950s, China imported a total of 156 complete plants from the Russian Federation for steel, machine building and energy industries. China sells to the Russian Federation mainly foodstuffs, ores and metals, textile fibres, vegetables and fruits and oil seeds in exchange for chemical fertilizers, iron and steel, cork and wood, road vehicles and non-ferrous metals. In the past 15 years, the trade relations between the two countries experienced vicissitudes. The two-way trade dropped sharply during the 1960s and 1970s.

In 1990, the traditional intergovernmental accounting remained the main form in Sino-Soviet trade exchanges, at the same time, the economic and trade cooperation between economic organizations of the departments, localities and borders of the two countries has been developed continuously.

In 1990, under the trade agreement between two governments, the total actual trade volume of import and export between China and the Russian Federation was $US 3.892 billion, up 5.8 per cent over 1989. Of which, China's export was $US 2.133 billion, up 21.1 per cent over 1989; while its import from the Russian Federation was $US 1.758 billion, down 8.3 per cent comparing with 1989. The import and export commodity of both countries are mutually complementary. The major commodities of export were: maize, soybean, groundnut kennels, frozen pork, frozen beef, canned port, fruit, wolfram ores, cotton, woolen blanket, towels and bath towels, knitwear, sewing products, tea, sneakers, sportshoes, household electric appliance, storage batteries, bearings and so on. The major commodities that China imported were: gasoline, diesel oil, pig iron, steel products, copper, aluminum, urea, timber, cars, planes, technology and complete sets of equipment. In view of the commodity structure primary products of raw materials and etc. exported by both countries accounted for 50 per cent of their respectively total export. And the rest were light industrial and textile products, mechanical and electronic products of mutual exchange.

China has trade with five East European countries (Bulgaria, the former Czechoslovakia, the former German Democratic Republic, Hungary and Poland). In 1990, the total trade value between China and these countries came to $US 1.507 billion. Of the total, China's trade value with Poland was $US 291 million; China's trade value with Bulgaria was $US 108 million; China's trade value with the former Czechoslovakia was $US 589 million; China's trade value with Hungary was $US 120 million; and China's trade value with the former German Democratic Republic was $US 399 million. The main exports from China to these five countries included: textiles, light industrial products, arts and crafts, cereals, oils and foodstuffs, tea, etc. China's major imports were: machinery, various types of vehicles, power generating equipments, chemical fertilizers and steel products, etc.

China is exporting rice, soyabeans, cotton, maize, canned fruits and vegetables, frozen pork, textiles, native and animal by-products and sporting goods, etc. to the five East European countries. In return, China is buying chiefly steel products, fertilizer, polyethylene, soda ash, caustic soda, trucks, processing machinery, coal mining machinery and equipment, etc.

B. FOREIGN TRADE POLICY AND ADMINISTRATION

1. Government policy on foreign trade

China pursues the policy of self-reliance and the principle of equality and mutual benefit in foreign trade. On its view an independent and self-reliant approach in foreign trade means that no trading activities are undertaken at the expense of the country's sovereignty and interests. A nation must first of all rely on its own efforts, wisdom and resources in the efforts to develop its economy. It is especially true for a large country like China. China thus on one hand actively develops trade relations with countries all over the world, and on the other hand judiciously and selectively imports the goods it needs and promotes exports to help strengthen its national economy.

The principle of equality and mutual benefit requires fair, reasonable and beneficial to trading terms and conditions between trading parties. Trading partners should respect each other's customs and regulations and observe their agreements and contracts.

2. Task of foreign trade administration

The prime task of China's foreign trade administration is to work out as well as ensure its foreign trade and related policies, principles and plans implemented in import and export trade. The Ministry of Foreign Trade and Economic Cooperation (MOFTEC) is empowered by the State Council to enact foreign trade laws, policies, principles and regulations and is exclusively responsible for their implementation.

The foreign trade administration also has the tasks of examining and approving the establishment, amalgamation or cancellation of foreign trade enterprises. MOFTEC is also empowered by the State to exercise these responsibilities according to the instructions of the State Council.

China realizes its foreign trade administration mainly through foreign trade plans and licensing system.

3. Import administration

(a) Import plan

China has formulated specific principles to guide its import plans. They are:

- Products that can be produced domestically and meet the requirements of the domestic market in both quantity and quality are generally not to be imported;
- Products that are harmful to the people's health are not to be imported;
- Certain products that are unable to meet the needs of the domestic market, though they can be produced domestically, may be imported but in a reasonable quantity;
- The essential means of production for the country's economic development are to be imported in a planned way, even though they can be produced domestically if domestic production cannot meet the requirements of the home market both in quality and quantity;
- Essential and needed materials that cannot be produced domestically can be imported whenever required. Spare parts and materials that are temporarily in short supply in the domestic market but are needed for processing and compensation business can be imported in a planned manner;
- Advanced technology and urgently needed key equipment that can improve China's capability for self-reliance and accelerate the modernization can be imported.

An annual import plan is based on the domestic requirements. The plan may be adjusted according to funds available, import needs and changes in the world market.

The annual import plan is classified into central (state) plan and local plan. The central plan is formulated jointly by the State Planning Commission, the Ministry of Foreign Economic Relations and Trade and other ministries concerned, indicating the amount of foreign exchange allocated for imports. Local import plans are drawn up by the provincial, municipal and autonomous region's planning commissions and their foreign economic relations and trade bureaus and other bureaux concerned. The plans must be submitted to the local people's government for approval, and copies of the approved plans must be submitted to the State Planning Commission. The imports by localities are purchased with locally-owned foreign currency and handled by the local trading corporations.

Horizontally the annual import plan falls into the mandatory plan and the guidance plan. The mandatory plan is part of the state plan and must be fulfilled. It lists import items and indicates the amount of foreign currency allocated by the State for each item. The import business is operated exclusively by the designated national specialized import and export corporations. The commodities under the mandatory import plan are generally such important and staple commodities as grain, edible oil, sugar, chemical fertilizer, steel and timber. Commodities involved in the governmental agreements also come under the mandatory plan. The guidance plan indicates only total amounts of foreign currency for items under the plan. It does not specify the amount of foreign currency for each item. The plan can be adjusted according to changes in the domestic and world market.

(b) Import licensing system

Following the restructuring of the foreign trade system a number of localities and industrial enterprises are permitted to engage in foreign trade and import goods with their retained foreign currency. In order to control imports, the Chinese authorities promulgated interim import control regulations and instituted a system of import licenses in 1980. On 10 January 1984, the State Council announced "The Interim Regulation on Licensing System for Import Commodities of the People's Republic of China", and in May of the same year MOFTEC and the General Administration of Customs issued rules to implemente the Interim Regulations.

MOFTEC is designated by the State to administer commodities license system and determine licensed commodities. Import commodities subject to licenses are administered by both MOFTEC at central level and by the Foreign Economic and Trade Commissions of provinces, municipalities and autonomous regions at local level. MOFTEC and its agencies at port cities are responsible for examining and issuing permit to those import commodities for areas in their duty jurisdiction, while the Foreign Economic and Trade Commissions of provinces, municipalities and autonomous regions and cities with independent planning powers are responsible for examining and issuing permit to other commodities under their jurisdiction. Up to July 1992, 53 kinds of commodities are under import licensing systems, of which, 16 are licensed by MOFTEC, and 37 are by local departments in charge of foreign economic relations and trade. The MOFTEC's agencies (special commissioners offices) at trading port cities are in charge of issuing permit to those commodities that fall under the responsibility of provincial-level bureaus and commissions in charge of foreign and economic relations and trade.

The scope of commodities subject to licensing system may be adjusted by MOFTEC according to China's foreign trade policies.

Foreign exporters, when selling to China, are advised to pay attention to the following: (1) whether or not the commodity to be imported are under licensing system; (2) which Chinese department has power to issue import permit; (3) whether or not the Chinese importing corporation could obtain import permit; (4) whether the Chinese buyer is permitted to import directly from foreign exporters; and (5) whether the Chinese buyer has foreign currency to pay for the imports.

Cancellation of import licenses

Import licenses are canceled for:

- Commodities whose import is banned, or temporarily suspended by the State;
- Commodities that are not in consistency with State foreign trade policy and bilateral trade agreements;
- Imports requiring hygiene or quarantine which fail to meet standards set by China's health, agricultural, animal husbandry and fishery departments;
- Commodities detrimental to the interests of the State produced through illegal dealings.

4. Export administration

China encourages export business, but the export of certain commodities is controlled and their export quantities are strictly restricted. If there is a real need to exceed the export plan, the case should be reported to and approved by the responsible department. The control of export goods is realized mainly through export plan and license. In forming an export plan, the following categories of commodities are to be controlled or restricted:

- Commodities in short supply at home;
- Commodities consuming excessively high amounts of energy;
- Commodities essential to the people's livelihood;
- Export of valuable artifacts and antiques are strictly prohibited.

(a) Export licensing system

Export licensing is an important measure in administration of export trade. In order to bring the export trade activities of all Chinese foreign trade corporations into line with unified policies of the State, China instituted an export licensing system in 1980. The Ministry of Foreign Trade and Economic Cooperation is authorized by the State Council to take charge of issuing export licenses. The Ministry as well as the Foreign Economic Relations and Trade Commission of provinces, municipalities and autonomous regions are organs designated by the Ministry to administer the system of export licenses.

In accordance with the export licensing system, a corporation, having been given approval to engage in export business, is generally regarded as having obtained licenses for export of the commodities as specified within the scope of its business and is not required to apply further for licenses for such commodities. However, licenses are required for those under the list of license system.

By the end of 1990, among 185 kinds of goods, under the licensing system 22 export items are to be issued by MOFTEC, 75 by the special commissions offices stationed at the main coastal ports and 88 by foreign economic relations and trade bureaux of various provinces, municipalities and autonomous regions.

The Ministry of Foreign Trade and Economic Cooperation is responsible for issuing import permits for important commodities to be imported by the central government departments. Provincial-level departments in charge of foreign economic relations and trade (including departments of those cities having independent planning power) are responsible for issuing import permits for commodities to be imported.

(b) Quota system

China has employed a quota system on certain import and export commodities. Commodities under the export quota system are generally those with quotas set by importing countries and those which are in short supply at home. So far China has signed bilateral textiles trade agreements with EC, the United States, Canada, Finland that have set import restraints for certain categories of textiles.

A quota system is also applied to certain imports control with a view to protecting domestic industry. The import and export of quota categories must be licensed by proper authorities.

MOFTEC is solely responsible for the allocation and adjustment of quotas. The administrative departments at provincial level take part in execution, so as to exercise strict control on the export of textiles and other exports with quotas, as well as on import of commodities with quantitative limit set by China.

Types of China's export quota control:

Textiles export quota. Since 1979, China has signed bilateral textiles trade agreements with the United States, Canada, Sweden, Finland, Austria, Norway and the EC. Because all the above countries have set limitations on the import of China's textiles and the Chinese Government has indicated in the agreements that it will adopt measures to control on its own the export of its textiles, the export quota for textiles is also called agreed quota (passive quota).

Commodity quota for exports to Hong Kong and Macau. To change the confusing situation in China's export to Hong Kong and Macau and ensure the stability of these markets, in the second half of 1985, the Ministry of Foreign Economic Relations and Trade began to introduce the license control over 235 kinds of commodities to be exported to Hong Kong and Macau. On 20 June 1988, the ministry narrowed the scope of quota control over exports to Hong Kong and Macau. Export quota control is introduced to 69 kinds of fresh and frozen goods (export quota plus export license are introduced to 29 commodities such as live animals and poultry, eggs, frozen meat, frozen poultry and fruit, and export quota plus export clearance are introduced to 40 kinds of commodities such as freshwater live fish, fruit and vegetables). The number of other products under quota control is reduced from 158 to 47. The commodity quota of exports to Hong Kong and Macau belongs to positive quota.

China has decide to liberalize its export control in connection with export quota and licensing as from 1 January 1993. The main features are as follows:

- 38 items relating to resources of national economy and people's livelihood and traditional goods;
- 54 items covering China's leading exports in the world market and items under restrictions of importing countries;
- 22 items of exports involving large amount of money with tendency to cause operational disorder;
- 24 items which are under quotas of importing countries;

The implementation of export licensing for 114 items is under the responsibility of the Ministry of Foreign Trade and Economic Cooperation (MOFTEC).

The management of planned export quota is decentralized under the supervision of MOFTEC. Excluding 16 items which are placed under unified State management, other items under quota licensing are distributed to the management of various local administration. No enterprise is allowed to handle: (i) items endangering to State security; (ii) cultural relics, rare animals and plants close to extinction, products produced by prisoners and items banned to export; (iii) items violating obligation committed by the Government; and (iv) musk, natural bezoar, copper and copper alloy, and platinum. For detailed information, please see Annex 3.10.

(c) Trade under Government Agreement

MOFTEC is empowered to, on behalf of the Government, sign intergovernmental trade agreements and to organize relevant foreign trade corporation and industrial and trade corporations to carry out the agreements and sign contracts.

5. Applying for setting up of a foreign trade corporation

An enterprise desiring to engage in economic and trade activities must first submit the required application indicating its charter, capital, scope of business, main tasks and staff. If the enterprise is to be a national or inter-provincial one, the application must be submitted to MOFTEC for examination and approval. If the enterprise is to be provincial one, its application should be forwarded to the local competent authority of the provincial, municipal or autonomous region's people's government. When approval is granted, the enterprise proceeds to the State Administration for Industry and Commerce to complete the registration procedures.

All approved trading corporations must follow government policies and guidelines, submit themselves to the unified administration of MOFTEC. They have the obligation to fulfil the foreign currency earning quota allocated by the State, and are also required to handle their business strictly within the scope of business approved by the State.

6. Administration of foreign trade activities of major coastal ports

China has set up special commissions offices in 15 port cities such as Shanghai, Tianjin, Dalian, Guangzhou, Qingdao, Haikou and etc. in order to facilitate the implementation of China's unified policy, unified planning and unified steps and action in foreign trade activities. The main functions of the special commission's offices are:

(a) To supervise and direct the foreign trade activities of these ports;

(b) To examine and issue import and export commodity licenses within the scope authorized by the Ministry of Foreign Economic Relations and Trade;

(c) To assist the head offices of the China National Import and Export Corporations in harmonizing activities in the management of major and important export commodities;

(d) To convene conferences of economic and trade departments in ports and inland provinces and autonomous regions to exchange information and coordinate their trade and economic activities;

(e) To make proposals to MOFTEC concerning the implementation of trade policies, the consolidation of import and export management and the reform of the economic and foreign trade structure.

7. Administration of resident offices of foreign enterprises

Following the strengthening of economic ties with foreign countries, China began in 1980 to permit foreign enterprises to establish resident offices in China and promulgated "Interim regulations for control of resident offices of foreign enterprises in China".

In accordance with the regulations, foreign enterprises desiring to open a resident office in China should apply for permission and seek approval from the responsible department in China. Only after approval is obtained and the required registration procedure completed can the foreign enterprise be allowed to start business activities in China. So far, foreign enterprises from 42 countries have set up 2,364 resident offices in China.

When applying for permission, a foreign enterprise is required to produce (a) an application form signed by the chairman of the board of directors or the general manager of the enterprise; the application form should provide such information as the name of the resident office to be set up, the name(s) of the responsible member(s), the scope of activity and duration and locality of the office; (b) the legal document sanctioning the operation of the enterprise issued by the authorities of the country or the region in which that enterprise operates; (c) the capital credibility document issued by the banking institution(s) which has business contact with that enterprise; and (d) the credentials and biographies of the members of the resident office appointed by the enterprise. For a banking or insurance institution, an annual report on its assets and liabilities and the losses and profits of the head office of the enterprise is also required.

A trader, manufacturer or shipping agent applies for permission to set up residential office to MOFTEC; a banking or insurance institution applies to the People's Bank of China; a maritime shipping operator or an agent applies to the Ministry of Communications; an air transport enterprise applies to the General Administration of Civil Aviation of China; and enterprises outside these lines, according to the nature of their business activities, apply to the proper commissions, ministries or bureaux of China.

Registration is made with China's State Administration for Industry and Commerce of central or relevent local government.

Once the enterprises are approved and registered, the legitimate rights and interests of the foreign enterprises will be protected in accordance with the relevant Chinese laws. Such illegal acts as swindling and illicitly selling are banned and punished. Violators of Chinese laws are dealt with by the Chinese authorities concerned.

8. Trade plan formulation procedure

Primarily, China has a centrally planned economic system. Its foreign trade, unlike that of market economy countries, is implemented based on state policies.

China's foreign trade plans are formulated annually. They are first drafted by the local foreign trade branches, and forwarded by them to both the national foreign trade corporations in Beijing (their head offices) and the local governments, who then put the plans together and submit them to the Ministry of Foreign Economic Relations and Trade. The draft plans estimate the goods available for export and import requirements for the coming year.

The conference on the formation of the plan is normally held in August or September. Participants from central ministries, enterprises in charge of production and supply, all foreign trade corporations and trade bureaux in provinces, municipalities and autonomous regions attended this conference. Participants are requested to report their prepared draft plans, which are incorporated by the Ministry of Foreign Economic Relations and Trade, and submitted to the State Planning Commission for coordination and balancing, and then to the State Council for approval. After approval, the plans are sent back to the localities, ministries and foreign trade corporations for implementation.

C. CURRENT REFORMS OF FOREIGN TRADE ADMINISTRATION

The restructuring of the management of foreign trade started in 1979. Decision-making powers were decentralized from the central government to departments and localities (provinces, municipalities and autonomous regions), yet enterprises did not have full powers in their operation and management.

Since early 1985, the Chinese authorities have taken a number of measures to deepen the reforms so as to stimulate foreign trade and increase economic results. These measures can be summarized as follows:

1. Employment of agency system

In the absence of the agency system, the foreign trade corporations, according to the annual plan, sell to and buy from the world market on behalf of production enterprises and users that are separated from the world market. The foreign trade corporations assume the responsibility for losses and profits.

Under the agency system, the foreign trade corporations, in principle act just as agents, and users sole responsibility for their profits and losses. The users can freely select foreign trade corporations as their agents. Production enterprises with operational power of foreign trade also have the right to import by themselves.

The agency system helps strengthen economic accounting. Profits and losses will depend on whether the foreign trade corporations provide good service to the consignor units, and on how much agency business they handle.

At present, the agency system is applied to imports and exports. The import of large complete plant projects and certain staple and sensitive commodities are still exclusively handled by designated China National Foreign Trade Corporations. However more than 50 per cent of import business has now adopted the agency system.

The staple commodities and those essential for national economy and the people's livelihood are still exported by various specialized export corporations. Export of other commodities is gradually being undertaken by branches in the localities and coastal ports, and production enterprises and companies with operational powers of foreign trade. The same commodity can be cross-handled by a number of foreign trade enterprises within their approved business lines, and competition is allowed.

2. Employment of contracted management responsibility system

As part of efforts in reforming foreign trade administration, the Chinese authorities in 1988 granted certain autonomy to foreign trade corporations and enterprises in independently managing personnel, finance and materials. In the meantime, contracted management responsibility system was introduced to foreign trade with a view to bringing foreign trade corporations and enterprises to take fully responsibility for their profits and losses. This system has brought foreign trade corporations and enterprises on competition and to strengthen trade activities, as the foreign trade corporations at all levels, under this system, are committed to task quota every year and enjoy bonus if task quotas are over fulfilled.

3. Cancellation of export subsidies from the State

Since 1991, the export subsidies from the State have been canceled. The foreign trade enterprises have to carry out the responsibility for their own profits and losses, which enables them to improve management.

The ongoing new foreign trade system is intended to realize self-responsibility for profits and losses under equal competition. It is of an important step to break thoroughly "eating from a big pot", to upgrade the management level of foreign trade enterprises and their economic results, and to avoid rushing to purchase and to sell at the expense of the country's interest.

4. Direction for foreign trade system reform

The core task of foreign trade reform is to make foreign trade enterprises self-competent in the world market. The achieve this goal, China will reform the internal mechanisms of enterprises, improve the macro management, and import and export operation system. In promoting foreign trade enterprises to develop toward industrialization, grouping and internationalization, China shall strengthen self-developing capacity, internal administration, heighten service sense, promote the integration of trade with industry and upgrade quality of enterprises. China shall further perfect and enhance the mechanism of service and coordination of chambers of commerce.

D. IMPORT PROSPECTS

After economic readjustments ended in 1990, China began in 1991 to carry out the 8th Five-Year Plan. The objectives of the Plan, coupled with deeper and wider reform in the following years require the country to modernize its industries and improve living standards of the people. To achieve these objectives, outmoded machines and equipment are to be replaced by advanced ones gradually, infrastructure needs to be improved, new technology and advanced machines are to be introduced in textiles, food, electric and light industries so as to meet fierce competition in the world market.

1. Import priority areas

The Chinese authorities have planned to make its total imports valued at over $US 300 billion during 1991-1995, almost equal to the total in the previous 10 years. The imports would focus on advanced technology and equipment to modernize industries, agriculture, energy, transportation, telecommunications, electronics and important raw materials.

Technological import has now shifted from buying mainly complete sets of equipment to importing software technology.

Technology imports by China are in various forms: (a) licensing agreements; (b) co-production; (c) technical consultancies; (d) processing of supplied materials; (e) compensation trade; (f) cash purchase of equipment or production lines; (g) joint ventures etc..

2. Priority areas of technology imports

(a) Technology and equipment for energy development

The energy development plan concentrates on coal and water, as China has an abundance of both coal of thermal power and water power resources, most of which have not been developed. In addition to the ongoing projects, China plans to open up a number of new coal mines and establish several large and medium-sized hydropower and nuclear power stations. Their construction will involve the import of power generating equipment for hydro-thermal and nuclear plants, electricity transmission and transformation units, and equipment for coal mining.

(b) Technology and equipment for the development of transport and communications

The construction of deep-water berths in ports and several railway lines require the import of advanced technology and equipment as well as steel and other construction materials.

The items needed in these sectors include transport equipment (various types of locomotives, rolling stock and automobiles), construction machinery, communications equipment (including digital and optical fibre communications equipment), integrated mechanical and electronics technology, and modern construction materials.

(c) Mining equipment and agricultural machinery

China has rich iron and other ferrous and non-ferrous metal resources, which are being exploited in a planned way. Over the past few years, China has imported special vehicles for copper mining; equipment for copper ore processing and smelting; mine hoist installations, drilling and blasting equipment; machines for making haulage chains, mining cables and couplers; gold dredgers; vacuum inductor furnaces for production of nickel-cobalt alloys; cut-off lathes for hydraulic mining equipment and technology for processing rare earths. Some of these machines will still be on accelerating development of China's mining industry.

China will not import agricultural machinery in general, yet certain kinds of big and advanced machines suited to China's state farms will to be imported.

(d) Advanced technology and equipment for modernizing existing industries

China has approximately 400,000 industrial enterprises whose equipment is outmoded in large numbers and needs to be upgraded.

The existing enterprises that need to be modernized cover a wide range of sectors, but textiles making, food processing, machine and electronic manufacturing are the priority sectors in technological transformation.

Textiles transformation calls for the import of equipment for spinning, weaving and knitting of cotton, wool, flax, silk and synthetic fibres, particularly finishing equipment such as dyeing and sizing machines for high-scale textiles. Processing equipment is needed for food, plastics, leather and fodder, plus production lines for packaging machines. Metallurgical equipment (including direct reduction steel mills and continuous casting rolling) is also badly needed.

3. Essential materials

In addition to advanced technology and equipment, China will also in the future import a number of materials essential to China's modernization construction. These materials include sugar, timber, natural rubber, non-ferrous metals, fertilizers, pharmaceuticals, dyestuffs, catalysts, etc.

E. EXPORT PROSPECTS

1. China's commodity production strategy

China will further accelerate its exports by improving the quality, variety and design of export goods and diversifying export markets. The export strategy is to develop vigorously high value-added labour-intensive industrial goods and mining products, and to promote the traditional commodities. This strategy is based on China's rich natural and labour resources, its traditional expertise in making handicrafts and the present stage of economic development.

Sales of the following categories of commodities are predicted to grow in future:

(a) Coal and petroleum

Substantial foreign and domestic funds have been invested to develop coal and petroleum resources. Before the end of 1995, new mines of large, medium and small sizes will provide a greatly increased production level. A substantial increase in coal production will enable China to increase its coal exports by a big margin.

(b) Rare earths and products

China's exploitable rare earth deposits rank first and its annual production capacity of rare earths ranks second in the world. China can produce and is able to supply in large quantity rare earths, semi-finished and finished products. In recent years, the export volume of China's rare earths has increased gradually year by year.

(c) Handicrafts and other traditional exports

Arts and crafts and certain native produce and animal by-products are traditional Chinese exports. Many of them are high foreign exchange earners. China has long-standing experience, competitive expertise and adequate labour to develop these labour-intensive goods. In addition, these commodities enjoy international fame and traditional markets. China is therefore in a competitive position to develop them. Now efforts are being made to improve the quality and design of these goods. It can be expected that China will increase its sales of these commodities, which include bristles, casings, fur, down and feathers, cashmere, rabbit hair, porcelain, pottery, rattanware, bamboo articles, straw articles, carvings, carpets, lacquerware, drawn-work, embroidered goods, pharmaceutical and medicinal herbs, tea, preserved fruits and other local specialties.

(d) Finished and semi-finished products

Raw materials and primary products still make up almost half of China's export. China will gradually and greatly increase its ability to process raw materials into finished products and raise the share of finished and semi-finished goods in total exports.

These finished and semi-finished products include the categories of textiles, garments and other light industrial goods and foodstuffs. Thus, China will, for example, manufacture for export cashmere thread into sweaters, fur and further into coats or other products, fellator silk into fabrics, wax into candles and cotton thread into cloth and ready-to-wear goods. With regard to foodstuffs, exports of fresh vegetables and fruits as well as canned foods will be greatly expanded in future.

(e) Machinery

China produces much machinery, and exports of these products account for over 10 per cent of the country's export total. It is likely that China will promote exports of technology-intensive products in the next decade. China is able to increase exports of machinery in the near future because its machine-making industry is advanced in some aspects such as the making of lathes, switches, water metres, watt-metres, abrasive tools, bearings and farm implements.

(f) Shipbuilding industry

China's shipbuilding industry is young, but developing quickly. China has 26 large and medium-sized shipyards, 66 ship equipment factories and 80 shipways and has an annual production capacity of 2,000 ships of various sizes, up to 100,000 dwt. Its extensive shipbuilding and repair facilities include more than 20,000 machine tools, which can turn out large quantities of such diverse items as main marine engines, auxiliary machinery, gauges, instruments, shaft systems, propellers, anchors, anchor chains, valves and a host of other articles.

The rapid growth of the shipbuilding industry enabled China to export ships totalling 900,000 tons during the past three years. Thirty-four of these ships are of the 10,000-tons class, with a total tonnage of 770,000 tons. The exported vessels include 36,000- and 27,000-ton bulk ships, 17,000-ton multi-purpose cargo ships, 12,300-tpm container ships and 700-hp tug-boats and pleasure vessels.

The prospects for China's shipbuilding industry are bright.

2. Market strategy

Hong Kong, Macau and Japan are the biggest markets for China's exports. In 1990, the Chinese exports to Hong Kong and Macau accounted for 36.38 per cent of the total exports; Japan, 17 per cent; the ASEAN countries, 6 per cent; EC, 9.7 per cent; the United States, 9.2 per cent; and the Middle East and oil-producing countries of north-west Africa, 3 per cent.

The Chinese Government believes that because of limited market capacity for Chinese products in Hong Kong and Macau and the problem of trade imbalance with the ASEAN countries, further expansion in sales to those markets will be difficult. But the markets in Japan, Western Europe, the United States, the Middle East and the oil-producing countries still have a capacity to absorb Chinese exports. Therefore, Chinese goods (especially traditional foodstuffs, handicrafts and some industrial exports) would seek to enter the markets in those areas, while China consolidates and expands its exports of traditional goods to Hong Kong, Macau and the ASEAN countries. China's strategy is to diversify its export markets.

F. ECONOMIC AND CONTRACT ENGINEERING CORPORATIONS

Since China adopted an open economic policy in 1979, it has actively involved its economic cooperation with foreign countries in the world market.

Since 1979, China has established international contracting engineering corporations undertaking overseas projects and labour services abroad including feasibility studies, survey, design, construction, installation, technical advice, personnel training, contracts for complete plant construction or subcontracts for individual projects, cooperative or joint venture contracts for engineering projects with overseas firms in oil and gas, coal mines, railway projects, highways, urban roads, bridges, airport runways, ship-repairing and equipment, harbour construction, factory buildings, office, residences, hotels, hospital buildings, etc. and agricultural as well as commercial projects.

During the 7th Five-Year Plan period, China's overseas contract engineering projects, labour services and overseas investment acquired new development. Contracts for engineering projects and labour services added up to 11,000, with a contractual value of $US 10.1 billion, and a turnover about $US 7 billion, which were 1 and 2 times of those of the 6th Five-Year Plan. In the course of the five years, China sent abroad 230,000 labour service personnel. Meanwhile, overseas non-trade enterprises with Chinese investment developed by a large margin. By the end of 1991, the already-approved and established overseas enterprises accumulated to over 800, which scattered in 94 countries and regions with Chinese investment of $US 1 billion. Among these, over 600 were approved during the 7th Five-Year Plan period with Chinese investment of $US 800 million. Most of operating enterprises were in good running.

By 1990, China has set up 166 economic and engineering corporations at both central and local level engaging in contracted projects and labour service and in 1990 they generated foreign currency totalling $US 2.6 billion. By the end of 1990, China completed 1,300 projects in the developing countries in such fields as agriculture, industry, construction, broadcasting, hydraulic power, water conservation, handicrafts, transport, communications, and medical science. By the end of 1992, Chinese enterprises had opened 2,463 business firms in more than 120 countries and regions with a total investment of about $US 2 billion. With national economies growing in both China and the developing countries, the economic and technical cooperation between China and the developing countries in wider fields is predicted to grow in future. For detailed statistics on foreign trade, please read annex 3 in part two of the Guidebook.

Table 1. List of 22 items of the commodities of which the export licenses are to be verified and issued by MOFTEC*

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
1		Maize		
	044	Maize	M.T.	Referred to as full grain maize.
	0441	Broken maize	M.T.	
	04704	Powdered maize	M.T.	Excluding maize starch.
2		Mushrooms	M.T.	Referred to as salted, salinized and sour (acetic) small white mushrooms, other mushrooms are not under licensing administration.
	054621	Mushrooms in brine		
	056593	Canned mushrooms	M.T.	Referred to as small white canned mushrooms.
3		Tea		Export license of black tea and Oolong tea are respectively to be issued by Provinces and the Special Commissioners' Offices.
	07412	Green tea	K.G.	
	07419	Other tea	K.G.	Excluding health tea with medicines.
4		Bean expeller/cake		
	08131	Bean expeller	M.T.	
	08132	Bean cake	M.T.	Including bean cake and broken bean cake.
5		Yellow soybeans		
	2222	Yellow soybeans	M.T.	
	22221	Broken soybeans	M.T.	
	222211	Powdered soybeans	M.T.	Including soybean protein.
6		Silk		
	2613	Raw Silk	K.G.	Including tussah silk, native silk, doupion silk and other raw silk.
	26131	Filature silk	K.G.	Referred to as protein filature silk.
	26141	Silkworm cocoon	K.G.	Including silkworm cocoon waste.
	26142	Silk waste	K.G.	Including silk wadding, silk floss padding, silk tops, silk noil and other silk waste.
	6511	Silk yarn/thread	K.C.	Including spun silk yarn, noil yarn; thrown silk, etc. and blended yarn made of 50% or more silk, of which export of cotton silk blended thread, which made of 25% or more silk needs export license.
7	2631	Cotton	M.T.	Referred to as cotton of various grades, including substandard cotton and combed cotton, excluding absorbent cotton.
8	26832	Rabbit hair	K.G.	Including combed rabbit hair. Excluding rabbit hair yarn.

Note: * Commodities subject to export license requirement (185 items by the end of 1990)

Table 1. *(continued)*

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
9	322	Coal	M.T.	Including raw coal, screened coal, washed coal, lump coal, low carbon coal (including medium carbon coal, and peat), mixed coal, coal powder, gangue and humid acid materials.
10	333	Crude oil	M.T.	
11		Petroleum products		
	334111	Gasoline	M.T.	
	334211	Kerosene	M.T.	
	334212	Aviation kerosene	M.T.	
	33431	Diesel oil	M.T.	
	3344	Fuel oil	M.T.	
	334511	Lubricating oil	M.T.	
	334512	Base oil	M.T.	
	334531	Naphtha	M.T.	
	3413	Hydraulic gas	M.T.	
	3346	Other petroleum products	M.T.	
12	6513	Cotton yarn	Bale	Including blended yarn containing 75% or more cotton, and grey overall sewing thread. Excluding dyed cotton yarn.
13	65166	Grey polyester cotton yarn	Bale	Including grey overall sewing thread.
14	65214	Grey cotton fabrics	Yard	Including blended fabrics containing 75% and more cotton, gun-cleaning cloth of cut pieces of grey cotton fabric or blended cotton fabric, canvas fabric, corduroy fabric, cut flannelet fabric, plain cloth fabric, drill fabric momie cloth, raised flannelet, jacquard fabric, excluding yarn-dyed and printed fabric, medical gauze, nankeen.
15	653411	Grey polyester cotton fabric	Yard	Excluding yarn-dyed and printed fabric.
16	6541	Grey silk fabrics	Yard	Including shuttle-woven, knitted and silk loom-state silk fabrics, boiled-off silk fabrics and bleached silk fabrics. Excluding semi-finished silk for kimono.
17	6584	Drawnwork embroidery	Batch	Referred to as hand embroidered articles: cotton, linen, organdy, polyester cotton table cloth, pillowcase, pillowship, bed-spread, handkerchief (Cotton lawn, sheer linen, chief value linen), quest towel, tray cloths, doily, apron, cushion cover, curtain and woollen needlepoint tapestray. Hand knitting articles: reticella lace, tuscany lace, flat venice lace, batten lace, Q.V. lace, clunny face, bruge lace, tatting lace, filet lace, argo lace, crochet blouse, hats and skirts.

Table 1. *(continued)*

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
				Other products: Arabian scarves. Machine-embroidered articles: table cloths, bed sheets, pillow cases. Products made of silk are not included with the exception of crochet blouses and shirts.
18	6671	Pearls	K.G.	Including all kinds of pearls, pearl stringing and pearl necklace.
19		Steel and iron		
	67	Steel products	M.T.	Including steel billet (ingot) and various steel products, galvanized steel tube.
	2820	Scrap steel and iron waste	M.T.	Including steel and iron of disassembled ships.
	6712	Pig iron	M.T.	Including iron for casting and iron for steel making, excluding foundry iron products.
20	67162	Ferrosilicon	K.G.	Including ferrosilicon slags.
21	6822	Copper products	K.G.	Referred to as raw materials, including waste copper materials, copper based alloy products, copper wire with diameter more than 3 millimeters. Excluding copper wire with the diameter under 3 millimeters, copper pipe with the diameter under 12 millimeters and electric wire with insulating materials.
22	6842	Aluminium products	K.G.	Referred to as all kinds of aluminium and aluminium based alloy products. Including waste aluminium products, aluminium wire and waste pop-pop can. Excluding steel wires winded by aluminium wires, electric wires with insulating materials and processed aluminium door and window materials set.

Table 2. List of 75 items of commodities of which the export licenses are to be verified and issued by Special Commissioners' Offices of MOFTEC stationed in the port cities

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
1	0011	Live cattle	Head	The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Officers stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
2	0013	Live pig	Head	The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
3	0014	Live poultry	Head	Referred to as chicken, duck and goose. The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
4	00191	Suckling Pigeon	Head	Including live, iced fresh and frozen suckling pigeon. The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
5	0111	Beef	M.T.	Including fresh, iced fresh and frozen beef. The License for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
6	0112	Mutton	M.T.	Including fresh, iced fresh and frozen mutton. The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
7	01133	Frozen pork meat	M.T.	Including pork meat cuts, port loin (bone in) and iced fresh pork. The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
8	01134	Suckling pig	K.G.	Including live, fresh, iced fresh and frozen suckling pig. The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
9	01145	Frozen poultry	K.G.	Referred to as complete and cut-apart frozen chicken, duck and goose. The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
10	02511	Fresh eggs	K.G.	Referred to as hen eggs, duck eggs and goose eggs. The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen. The license for export by sea transportation is to be issued in accordance with quotas by the Special Commissioner's Offices.
11	034111	Live eel fry	K.G.	Including baby eel fry and roe. The license is to be issued by the Special Commissioners' Offices stationed in Guangzhous and Shanghai.
12	036011	Prawn	K.G.	Referred to as frozen prawn or iced fresh prawn with or without head, caught from the sea, and cultivated ones. The commodity of prawn (alive) are forbidden for export.
13	042	Rice	M.T.	Referred to as glutinous rice, round shaped rice (all including cargo rice, broken rice and paddy rice). Excluding rice products (glutinous flour).
14	04592	Sorghum	K.G.	

Table 2. *(continued)*

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
15	045991	Buckwheat	K.G.	
16	05422	Small red beans	K.G.	Another name: red beans.
17	05423	Green beans	K.G.	
18	054512	Garlic	K.G.	Including toasted garlic, excluding garlic with green leaves and skinless garlic.
19	05616	Osmund dried	K.G.	
20	056596	Canned asparagus	K.G.	
21	056597	Salinized chueh tsai	K.G.	
22	057791	Chestnut	K.G.	Excluding skinless chestnut meat.
23	12111	Flue-cured tobacco leaf	K.G.	
24	0565961	Canned broad beans	K.G.	
25	2111	Raw cattlehide	Piece	Including wet blue hide.
26	21141	Raw goatskin	Piece	Excluding wet blue hide.
27	211992	Raw pigskin	Piece	Including wet blue skin.
28	21201	Raw milk skin	Piece	
29		Groundnuts		
	2221	Groundnuts	M.T.	Referred to as groundnuts in shell and kernels.
	098098	Groundnut products	K.G.	Referred to as fried groundnut kernels, baked groundnuts/kernels, salted and dry groundnuts/kernels. Excluding canned groundnuts and groundnut butter.
30	2225	Sesame seed	K.G.	Including hulled sesame seeds.
31		Timber		
	247	Logs	Cubic Metre	Excluding rubber wood, mulberry, paulownia logs.
	247211	Paulownia logs	Cubic Metre	The license for export is to be issued by the Special Commissioner's Offices stationed in Zhengzhou, Qingdao, Nanjing and Shanghai.
	248	Sawn products	Cubic Metre	Referred to as thick quarter timber products, semi-quarter timber products and plank, and semi-finished furniture products except paulownia logs, rubber wood and mulberry lumber. Excluding further processed sawn products.

Table 2. *(continued)*

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
	2484	Paulownia products	Cubic Metre	Referred to as thick quarter timber products, semi-quarter products of plank, and semi-finished furniture products. The license for export is to be issued by the Special Commissioner's Offices stationed in Zhengzhou, Qingdao, Nanjing and Shanghai.
32	2632	Cotton linters	K.G.	Referred to as linters. Excluding cotton waste.
33	265141	Ramie	K.G.	Including crack ramie.
34		Goat wool		The license for export is to be issued by the Special Commissioner's Office stationed in Tianjin.
	26831	Wool (uncombed)	K.G.	
	26872	Dehaired wool		
35	2876	Tin ore	M.T.	Including tin ore and concentrate tin ore.
36	28792	Tungsten ore	M.T.	Including tungsten ore, tungsten concentrate, low grade wolfram, pulverized tungsten and tungsten slim.
37	291164	Antlers	M.T.	Referred to as spotted deer antlers, wild deer antlers with blood, white lip deer antlers. The license for export by Heilongjiang, Liaoning and Jilin Provinces is to be issued by the Special Commission[illegible] Office stationed in Dalian. The license for export by other localities is to be issued by the Special Commissioner's Office stationed in Tianjin.
38	292412	Tang Kuei	K.G.	Including Tong-di Tang Kuei, Xiang Tang Kuei and head and end of Tang Kuei.
39	292413	Radix pseudoginseng	K.G.	Another name: penax pseudonginseng. Including its powder.
40	323212	Coke	M.T.	Including lump coke, crushed coke, coke powder and coke (semi-coke). Excluding petroleum coke.
41	335121	Paraffin wax	M.T.	Including liquid paraffin wax. Excluding chlorinated paraffin wax. The license for export is to be issued by the Special Commissioner's Offices stationed in Dalian, Tianjin, Shanghai and Guangzhou.
42	361	Heavy water	K.G.	The license for export is to be issued according to Import Export Document No. 808(86) of MOFERT.
43	515697	Furfural	K.G.	Including furfural alcohol.

Table 2. *(continued)*

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
44		Rare earth		
	522172	Other rare earths	K.G.	Referred to as other rare earths except for the rare earth containing 5%-90% of yttric oxide. Including rare-earth concentrates, rare-earth compounds, rare-earth metal and rare-earth alloy (including neodymium iron boron materials).
	5221721	Yttric oxide	K.G.	Referred to as the rare earth containing 5%-90% of yttric oxide.
	5221722	Monazite	K.G.	
45		Antimony		
	287991	Antimony ore	K.G.	Including antimony ore, refined antimony ore and high lead and arsenic content antimony.
	52248	Antimony oxide	K.G.	Including subantimony oxide and rough antimony oxide. It does not depend on content more or less.
	5231591	Antimony sulphide	K.G.	Including rough antimony sulphide, it does not depend on content more or less.
	689994	Antimony ingots	K.G.	Referred to as refined antimony. Including high lead and arsenic content antimony.
46		Tungsten products		
	689112	Tungstemetic carlide	K.G.	Including cast tungsten carlide.
	522595	Tungstemetic trioxide	K.G.	
	5225951	Tungsten acid	K.G.	
	5225952	Blue tungsten trioxide	K.G.	
	523314	Ammonium paratungstate	K.G.	
	689111	Tungsten powders	K.G.	
47	523181	Sodium sulphate	M.T.	
48	541781	Fresh royal jelly	K.G.	Including powder belonging to materials, and excluding patent medicines.
49		Menthol crystals/pepper-mint oil		The license is to be issued by the Special Commissioner's Office stationed in Shanghai.
	51221	Menthol crystals	K.G.	
	551312	Pepper-mint oil	K.G.	Including peppermint, dementholized and refined oil.
50	598141	Rosin	M.T.	Including resinous carbon.
51	6124	Leather working gloves	Dozen	
52	6342	Plywood	Cubic metre	

Table 2. *(continued)*

53		Paper		
	6411	Newsprint	M.T.	Referred to as white newsprint. Excluding paper of certain size and stencil duplicating machine paper of various specifications.
	64174	Corrugated medium paper	K.G.	
	64284	Toilet paper	K.G.	Referred to as that in rolls and in flatted shape both in big and small sizes and face tissues.
54	65136	Bleached overall sewing thread	Pound	Referred to as bleached cotton thread and cotton-polyester thread, including sewing thread in cones.
55	65196	Ramie yarn	K.G.	Including blended ramie yarn containing 50% or more ramie and other fibres.
56	652241	Bleached cotton cloth	Yard	Including medium bleached cotton cloth and brightened bleached cotton cloth, coloured cotton cloth containing 10% brightened cotton cloth are not to apply license for export. Excluding knitted bleached cotton cloth.
57	653412	Bleached polyester cotton cloth	Yard	Including medium bleached polyester cotton cloth and brightened bleached T/C cloth, but coloured T/C fabric containing 10% brightened T/C fabric are not to apply license for export. Excluding knitted bleached T/C cloth.
58	65442	Grey ramie fabrics	Yard	Including blended interwoven grey fabrics containing 50% or more ramie.
59	671693	Ferrotungsten	K.G.	
60	6851	Lead and lead based alloy	K.G.	
61	6582	Lead products	K.G.	
62	6861	Zinc and zinc based alloy	K.G.	
63	687	Tin	K.G.	Referred to as tin ingots, solder rods, solder wires and solder thread.
64	8997241	Bristle paint brushes	Dozen	Including heads of brushes. Excluding artistic brushes. The license for export to EC countries is to be issued in accordance with quotas.
65	291119	Bones grain	K.G.	Referred to as steamed bones grain.

Table 2. *(continued)*

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
66	29243	Ginseng	K.G.	Referred to as red ginseng, red ginseng dice, red ginseng fibrous root, shi-chu ginseng, white ginseng sweetened, wild ginseng sweetened, white ginseng dice, white ginseng fibrous root, soup ginseng and fresh ginseng and ginseng powder. The license for export is to be issued by the Special Commissioner's Office stationed in Dalian.
67	28711	Copper ore	M.T.	Including copper concentrate, powder.
68	2875	Zinc ore	M.T.	Including zinc concentrate, powder.
69	2874	Lead ore	M.T.	Including lead concentrate, powder.
70	2877	Manganese ore	M.T.	Including manganese concentrate, powder.
71	281	Iron ore	M.T.	Including iron concentrate, powder.
72	2871	Nickel ore	M.T.	Including nickel concentrate, powder.
73	057792	Walnuts in shell	M.T.	Excluding hickory nut.
	057793	Walnut meat	M.T.	
74	07415	Oolong tea	K.G.	The license for export is to be issued by the Special Commissioner's Offices stationed in Guongzhou and Fuzhou.
75	7522	Electronic computer	Set (Pieces)	Including complete set and complete set of parts.
	752201	Computer peripheral unit	Set	Including software and hardware of disk computer, magnetic tape recorder, printer and video terminal.

Table 3. List of 88 items of commodities of which the export licenses are to be issued by the Foreign Economic Relations and Trade Departments (Commissions, Bureaux) of provinces, autonomous regions, municipalities directly under the Central Government and cities with separate plans

No.	*Codings of Commodity*	*Name of Article*		*Remarks*
1	0012	Live sheep	Head	The license for export to Hong Kong and Macau by land transportation is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen.
2	01161	Pig by-products	K.G.	Referred to as fresh, iced fresh and frozen pig head, trotters and viscera, excluding brinded and processed hog casting. The license for export to Hong Kong and Macau by land transportation (including entrepot trade) is to be issued by the Special Commissioner's Offices stationed in Guangzhou and Shenzhen.
3	01211	Ham	K.G.	The license for export is to be issued by Zhejiang Foreign Economic Relations and Trade Department.
4	02512	Preserved eggs	Piece	Referred to as preserved eggs and salted eggs.
5	036021	River crabs	K.G.	The license for export is to be issued by Jiangsu, Hubei, Anhui, Jiangxi Provincial and Shanghai Municipal Foreign Economic Relations and Trade Departments (Commissions).
6	011892	Rabbit meat	K.G.	Including rabbit, cut rabbit, frozen rabbit and iced fresh rabbit.
7	291921	Bristles	K.G.	The license for export is to be issued by Foreign Economic Relations and Trade Departments (Commissions).
8	04833	Vermicelli	K.G.	Of which, the license of Longkou vermicelli is to be issued by Shandong Provincial Foreign Trade Bureau.
9	0546211	Matsutake	K.G.	The license for export is to be issued by Sichuan, Liaoning, Jilin, Heilongjiang and Yunnan Provincial Foreign Economic Relations and Trade Departments (Commissions). Including iced matsutake, salted matsutake, fresh matsutake and acid matsutake.
10	05614	Black moss	K.G.	The license for export is to be issued by Shaanxi, Gansu Provincial Foreign Economic Relations and Trade Department (Commission), and the Departments of Inner Mongolia, Ningxia Autonomous Regions and Qinghai Province.

The license for export is to be issued by Foreign Trade Bureaux of Tianjin Municipality and Shandong Province, and Hebei Provincial Foreign Economic Relations and Trade Commission.
87	871696	Silicon-manganese	M.T.	
88	07411	Black tea	K.G.	

IV. FOREIGN TRADE ORGANIZATIONS AND THEIR FUNCTIONS

A. MANAGEMENT DEVELOPMENT

Shortly after the establishment of the People's Republic of China, the new Government built up a comprehensive set of institutions and formed a strict state trading system to administer its foreign trade. The system was characterized by high centralization with the Ministry of Foreign Trade. The Ministry in charge of foreign trade was first named in 1950s as "the Ministry of Foreign Trade". It was renamed in 1982 as "the Ministry of Foreign Economic Relations and Trade or MOFERT in short" and as "the Ministry of Foreign Trade and Economic Cooperation or MOFTEC in short" in March 1993, respectively.

Foreign trade bureaux in provinces, municipalities and autonomous regions are under the leadership of the Ministry and the local governments, in charge of the foreign trade activities within their geographical jurisdiction. Under the system before 1978, foreign trade was monopolized by the Ministry of Foreign Trade, and the Ministry administered – the National Foreign Trade Corporations and their branch offices which were the only institutions conducting import and export business on behalf of domestic suppliers and users. The old management system separated the Chinese suppliers and users from the world market. The centrally controlled system of foreign trade did not change until the reforms of the foreign trade system began in 1978.

As part of the reforms of the whole economic system, a restructuring of the foreign trade system took place in 1978. Since then, foreign trade has been decentralized to localities, industrial enterprises and other ministries, which are permitted to organize trading corporations to deal with import and export business and engage in other economic activities after approval by the State Council.

B. CURRENT FOREIGN TRADE ORGANIZATIONS AND THEIR FUNCTIONS*

The structure of foreign trade organization has three levels: the Ministry of Foreign Trade and Economic Cooperation (MOFTEC) under direct administration of the State Council is in the central level; specialized National Foreign Trade Corporations (NFTCs) under the administration of MOFTEC are in the second level; and NFTC branches located in the provinces, municipalities and autonomous regions and some trading port cities are in the third level.

With the self-responsibility system for porfits and losses being introduced into foreign trade, the administrative leading power has been greatly reduced. Foreign trade enterprises at each level are independent to a large extent in finance and trading activities.

1. Ministry of Foreign Trade and Economic Cooperation (MOFTEC)

The Ministry, directly under the State Council, is a functional organization which is responsible for the administration of foreign trade and economic cooperation. Its functions are as follows:

---

* For detailed information, please read Annex 4.

(1) To study and draw up the strategy, principles, plan for the development of the State's foreign economic relations and trade and policies towards the specific countries and other relevant policies. To organize the implementation after the approval by the State Council;

(2) Under the guidance of the state's unified plans, to compile alone or with others the pertinent long-term, intermediate-term and annual plans, to exercise supervision and control and prepare statistics on the proceeding of foreign economic relations and trade; to organize the construction of export bases and to provide guidance to the enterprises of foreign economic relations and trade in management, finance and accounting;

(3) To organize the intergovernmental economic and trade talks and mixed committee meetings on the authorization of the State Council, representing the Chinese Government to sign multilateral, bilateral and intergovernmental economic and trade agreements, and to organize and supervise their implementation. To coordinate and guide the economic and trade cooperations between various localities and department with the Russian Federation and Eastern European countries;

(4) To draw up the pertinent laws and regulations for administration of foreign economic relations and trade and to organize and supervise their enforcement;

(5) With the relevant department, to study and draw up the plans as well as the supporting measures for restructuring the foreign economic relations and trade systems and to organize their implementation after the approval by the State Council;

(6) According to the State's plans, to organize, coordinate and supervise the talks and conclusion of agreements on foreign government loans, foreign investment, technology import and export and importation of complete plants. To examine and approve the major agreements and contracts on utilizing foreign funds and importing technology;

(7) To be in charge of the administration of State's foreign aid and to draw up the foreign-aid programmes for specific countries and to see to the realization of the foreign-aid programmes and technical cooperations;

(8) To be in charge of the administration of foreign contracting projects and labour service cooperation as well as the enterprises of economic cooperation abroad;

(9) To be in charge of the administration of economic and technical cooperation and exchanges with the organizations under United Nations and other international organizations. To be responsible for receiving and managing international economic and technical aid;

(10) To administer upon the import and export licenses and export quotas. To be in charge of examining the establishment of enterprises of foreign economic relations upon the commercial offices and economic counsellor's offices (representative's offices) and overseas enterprises directly under the Ministry. According to the limit of authorization, to examine foreign businessmen's representatives offices in China;

(11) To participate in studying and drawing up the tariff level, tariff structure, exchange rate and other foreign economic and trade adjusting measures;

(12) To be in charge of the administration of the international foreign agency services;

(13) To organize the investigation and research on the international economic and trade situation and market so as to keep abreast of international economic and trade information;

(14) According to the authorization for cadre administration, to administer upon personnel labour and wage affairs of cadres from the Ministry and from the subsidiary organizations. To be in

charge of the administration of the universities and colleges subsidiary to MOFTEC and the training of higher managerial personnel;

(15) According to the State's unified policies to guide the work of some independent organizations which are related to the Ministry; to guide and see to the coordination of foreign economic relations and trade work in various locations and departments;

(16) To undertake the matters assigned by the State Council.

MOFTEC has 20 functional departments including: General Office, Department of Policy Research and System Reform, Department of Personnel, Education and Labour, Department of General Planning, Financing and Accounting Department, Foreign Trade Administration, Import and Export Department, Department of Economic and Trade Relations with Taiwan, Department for European Affairs, Department for Asian and African Affairs, Department for American and Australian Affairs, Department of Aid to Foreign Countries, Department of Foreign Economic Cooperation, Department of Relations with International Organizations, Technology Import and Export Department, Foreign Investment Administration, Foreign Financing Administration, Department of Treaties and Laws, Protocol Department and Department for Administrative Affairs.

ORGANIZATIONAL CHART

Ministry of Foreign Trade and Economic Cooperation (MOFTEC)

Policy Research and System Reform Department
General Planning Department
Financing and Accounting Department
Foreign Trade Administration Department
Import and Export Department
Economic and Trade Relations with Taiwan Department
European Affairs Department
Asian and African Affairs Department
American and Australia Affairs Department
Aid to Foreign Countries Department
Foreign Economic Cooperation Department
Relations with International Organizations Department
Technology Import and Export Department
Foreign Investment Administration Department
Treaties and Laws Department
Foreign Financing Administration Department
Protocol Department
Administrative Affairs Department

In order to suit the need of the open-door policy and deepening of foreign trade structural reform, the special Commissioner's Offices are set up in main port cities by the Ministry. Their functions are as follows: to issue the import and export licenses of its region; to study the implementation of the State's foreign economic principles and policies and to supervise the foreign economic and trade enterprises of its region; to coordinate the economic and trade activities of its region; to investigate and study the strategic problems concerning the foreign economic activities and to put forward their suggestions.

2. Foreign trade bureaux or foreign economic relations and trade commissions in provinces, municipalities and autonomous regions

Under the leadership and the guidance of the local government and MOFTEC, the Foreign Economic Relations and Trade Departments (Commissions, Bureaux) of all provinces, autonomous regions, municipalities directly under the central government, as well as cities with separate plans have the authority to supervise and inspect the foreign economic and trade activities of its region. Their functions are as follows:

(1) To be in charge of the administration of all categories of foreign economic and trade enterprises from its region and to supervise and inspect their implementation of state laws, principles, policies, rules and regulations concerning foreign economic relations and trade. To draw up the concrete measures and implementing ways in accordance with its practical situation;

(2) To synthesize, compile and report to the higher level the foreign trade development, plans for all categories of foreign trade enterprises and integrated complexes of its region. To organize the implementation after the approval by the State;

(3) To coordinate, administer upon, supervise and inspect all the foreign trade enterprises of its region to operate according to their own scope of business;

(4) With relevant departments, to plan, promote and support the export commodity production;

(5) In accordance with MOFTEC's authorization, to endorse the import and export business qualifications of production enterprises and integrated complexes and to examine and approve the foreign businessmen's direct investment projects, technology importation projects and joint venture abroad below the limit, which do not need the State's overall balance.

(6) According to MOFTEC's authorization scope, to examine, approve and distribute the quotas and licenses of import and export commodities assigned to its region. To administer the commodities with quotas and limits;

(7) To supervise and inspect registration and the utilization of export commodity trade marks and to coordinate and solve the relevant problems;

(8) To be responsible for the approval and administration of the foreign businessmen's permanent representative's offices stationed in its region;

(9) To investigate and study the management of the enterprises with foreign investment and foreign economic trade enterprises, and with the concerned departments, to solve the relevant problems; and

(10) To undertake other matters assigned by the local government and MOFTEC.

3. National Foreign Trade Corporations (NFTCs)

National Foreign Trade Corporations (NFTCs) under MOFTEC are state-owned enterprises responsible for their own losses and profits. Each is specialized in a certain range of commodities and has a head office at Beijing.

NFTCs perform the following functions:

(a) In accordance with the instructions of MOFTEC and the nation's requirements and possibilities, they draft their respective plans within the spheres set down for their respective corporations, and after such draft plans are sanctioned by the Ministry, they implement these plans;

(b) In accordance with the approved plans as sanctioned by the Ministry, they sign contracts with foreign enterprises, for both purchases and sales. In accordance with the original plans, they receive the import goods advice from the domestic importing departments; and sign contracts or agreements and conduct financial settlements;

(c) They entrust foreign trade transport organizations with responsibility for ensuring accurate and timely shipments, distribution and insurance etc. of import and export goods;

(d) They investigate foreign markets and organize mini-fairs for export goods;

(e) They monitor foreign exchange settlements and cost accounting, fix quotas and strengthen the management of quotas;

(f) They associate closely with the related departments, guiding and developing the production of exportable products in a planned way and actively organize the sources of exportable products; and

(g) They lead in the work of their respective branches in their business activities and supervise and improve management, in order to accomplish the various planned tasks in time and in accordance with quality requirements.

Since 1984 the Chinese authorities have taken measures to deepen the restructuring of foreign trade management system by introducing an agency system. Under this system, agency business is the main activity for the national import and export corporations. Fifty per cent of import business is already carried out under the agency system, which will be applied gradually to all imports. Except for a certain number of specified influential and staple commodities, the bulk of commodities will gradually come to be handled by local foreign trade corporations. In addition, the NFTCs now participate in export partnerships. Export partnerships may be with foreign companies, or with domestic industrial enterprises.

At present, there are 19 NFTCs administered under MOFTEC (see Annex 4 for details) as follows:

(1) China National Foreign Trade Transportation Corporation;

(2) China National Chartering Corporation;

(3) China National Packaging Import and Export Corporation;

(4) China Trade Consultation and Technical Service Corporation;

(5) China National Cereals, Oils and Foodstuffs Import and Export Corporation;

(6) China National Native Produce and Animal by-Products Import and Export Corporation;

(7) China National Textiles Import and Export Corporation;

(8) China National Light Industrial Products Import and Export Corporation;

(9) China National Arts and Crafts Import and Export Corporation;

(10) China National Chemicals Import and Export Corporation;

(11) China National Metals and Minerals Import and Export Corporation;

(12) China National Machinery Import and Export Corporation;

(13) China National Instruments Import and Export Corporation;

(14) China National Technical Import Corporation;

(15) China National Silk Import and Export Corporation;

(16) China National Medicines and Health Products Import and Export Corporation;

(17) China National Export Bases Development Corporation;

(18) China National Overseas Trading Corporation;

(19) China Foreign Trade Development Companies Incorporation.

4. Foreign trade enterprises under industrial ministries

Trading corporations, organized by industrial enterprises whose products used to be exported through the National Foreign Trade Corporations, have been established and placed under the administration of respective ministries or commissions.

These new corporations now can sell their products directly to foreign companies and purchase goods abroad within the approved scope of business by the State Council.

These corporations are independent economic organizations or corporate bodies having the power to settle legal issues arising from their business activities and are administered by their respective ministries or commissions. Although these new trading corporations are not under the administration of the Ministry of Foreign Trade and Economic Cooperation (MOFTEC), they have to coordinate their trading activities and plans with MOFTEC and the National Foreign Trade Corporations concerned, as well as the State Planning Commission.

5. Main organizations relating to foreign trade

There are China Council for the Promotion of International Trade (CCPIT), the International Trade Research Institute (ITRI), the International Economic Cooperation Research Institute (IECRI), China Economic and Trade Consultants Corporation (CONSULTEC) and China International Trade Research and Training Centre for Asia and the Pacific Region (RTC). These organizations do not involve themselves in import and export trading, but engage in trade research, information, consultation and other foreign trade related activities. During the past 11 years, Chamber of Export Commodities, China Foreign Trade Association, China International Economic Cooperation Society, China Association of the Enterprises with Foreign Investment and China International Contractors Association have also been set up to take charge or to coordinate foreign trade activities among Chinese trade corporations and between Chinese and foreign companies and enterprises.

International Trade Research Institute (ITRI), International Economic Cooperation Research Institute and consultant service organization deal with information, consultation, research, and advertisement for promoting foreign trade business. There are various newspapers, journals and publishing houses under the ministry.

6. Government commercial organizations stationed abroad

Commercial counsellors' offices and commercial representatives' offices are component parts of Chinese embassies stationed abroad. The representatives are selected and sent by MOFTEC. They are subject to the dual leadership of MOFTEC and the respective embassies to which they are attached.

Their principal tasks are as follows:

(a) To promote and develop trade relations between China and the countries in which they are stationed, in accordance with government policy towards the respective countries and the principle of equality and mutual benefit;

(b) To make China's current economic development and trade policies known to the departments and enterprises concerned in foreign countries; to acquaint themselves with the economic and trade policy, laws and regulations, marketing conditions of imports and exports of the countries in which they are stationed, as well as information available on foreign exchange, ocean transport, insurance etc.;

(c) To participate in trade talks between China and the country to which they are accredited, and in the drafting of trade agreements;

(d) To coordinate and assist the foreign trade corporations in their negotiations with public and private enterprises of foreign countries on import and export business;

(e) To monitor import deliveries and export arrivals and the sale of goods, to supervise execution of agreements and contracts, and to study and propose adjustment and improvement measures;

(f) To endorse certificates of origin of imported products, to issue entrepot and transit certificates; to sign instruments relevant to the foreign trade of China by authorization of the Ministry of Foreign Trade and Economic Cooperation of the People's Republic of China; and

(g) To sign relevant trade documents as authorized by MOFTEC.

The commercial representative offices are staffed by personnel sent from various national foreign trade corporations. They are designated to represent their respective corporations, from which they receive directives in handling matters in relation to their business activities.

China has established 166 commercial offices abroad, including commercial representative offices.

To promote foreign trade, China has established a number of trade centres in commercially important cities abroad. They are China Trade Centre in the United States (New York), in Latin America (Panama) and in West Europe (Hamburg). These centres handle both import and export business and provide consultancy services.

7. Agency companies in Hong Kong and Macau

China has long established in Hong Kong and Macau companies acting as agents for various Chinese foreign trade corporations.

These agents deal in export and import business, and each of them takes charge of a certain group of commodities. They are empowered to negotiate and conclude transactions within their line of business. However, these agencies make purchases of specified commodities when necessary. In the past, some of China's imported timber, natural rubber, sugar and grains were bought through the agency companies in Hong Kong and Macau.

Since 1980, almost every province of the country has set up its office or company as window to conduct economic and trading activities.

Foreign businessmen who find it convenient to go to Hong Kong and Macau like to place orders with these agency companies there instead of buying directly from Chinese import and export corporations.

These agents are:

(a) China Resources (Holding) Co., Ltd. (in Hong Kong): the general agent for China's various national foreign trade corporations in charge of machinery, equipment, instruments, metals and minerals, chemicals and textiles;

(b) Nam Kwong Trading Co. (in Macau): edible oils and foodstuffs, native produce and animal by-products, textiles, light industrial goods, arts and crafts, chemical and metals and minerals;

(c) Chinese Arts Crafts (H.K.) Ltd. (in Hong Kong): arts and crafts only;

(d) Hua Yuan Co. (in Hong Kong): light industrial goods only;

(e) Ng Fung Hong (in Hong Kong): edible oils and foodstuffs;

(f) Tech Soon Hong Ltd. (in Hong Kong): native product and animal by-products.

In addition to the above agency companies, many other agency companies have been set up in recent years by local foreign trade bureaux, trade enterprises under various industries or local foreign trade corporations. These agency companies conduct trade in accordance with the instructions from their respective head offices.

C. CHINA COUNCIL FOR THE PROMOTION OF INTERNATIONAL TRADE (CCPIT)

1. Organization and function

The China Council for the Promotion of International Trade (CCPIT) is a non-governmental organization established in 1952 approved by the Chinese Government. CCPIT adopted China

Chamber of International Commerce (CCOIC) as its another name from 28 June 1988. It has close relations with domestic economic, technical and trade institutions and has established business contacts and friendly relations with nearly 100 chambers of commerce, economic and trade circles as well as firms and enterprises all over the world.

CCPIT undertakes various activities to promote economic and trade ties between China and other countries in the world.

Its business scope is as follows:

(1) To handle liaison work with foreign economic and trade circles, host foreign economic and trade delegations and professionals, and to organize and send Chinese economic, trade and technology delegations abroad for visits and investigations;

(2) To strengthen ties with foreign chambers of commerce, economic and trade associations and other international economic and trade organizations; to participate in relevant international economic and trade organizations or the activities sponsored by them; to handle liaison work with the Beijing offices of overseas industrial and commercial organizations and foreign chambers of commerce set up in Beijing; and to send permanent representatives, or establish commercial representative offices in foreign countries;

(3) To organize and participate in international economic and trade conferences, including those co-sponsored by CCPIT and similar foreign organizations;

(4) To stage exhibitions abroad or participate in international fairs; to help China's foreign economic and trade organizations and enterprises organize exhibitions abroad or participate in international fairs;

(5) To arrange and host foreign economic, trade and technical exhibitions in China, and sponsor multinational exhibitions and international fairs in China;

(6) To organize and hold technical exchanges between China and other countries; and to take charge of the collection, distribution, display and exhibition of literature and new product samples, as well as various overseas publications on science and technology;

(7) To handle international economic and trade arbitration and maritime arbitration affairs; to handle average adjustment on ship and cargo damages; and to issue and legalize documents, including certificates of origin, certificates of force majeure, documents on foreign trade, and shipping certificates;

(8) To act as agent for patent applications and trade-mark registrations at home and abroad; to provide consultancy services for industrial properties; and to help settle disputes and other issues regarding technological exchanges or trade;

(9) To compile and publish periodical on China's foreign economic and trade relations and technology, and some other publications; to sponsor forums with foreign visitors on China's economy and trade;

(10) To make investigations and collect economic information, and provide domestic and foreign enterprises and organizations with information and consultancy service in terms of economic and technical cooperation and trade; to conduct assessment and feasibility studies for Sino-foreign economic and technical projects; and offer credit information service;

(11) To guide the work of the local and industrial sub-councils; and

(12) To handle other matters on promoting economic and trade activities.

2. Procedures for holding exhibitions and technical seminars and symposia in China

(a) *Foreign exhibitions*

(i) Arrangements for exhibitions

CCPIT is in charge of the arrangements for foreign exhibitions. If approval is given for a foreign exhibition to be held in Beijing, all the necessary work will be undertaken by CCPIT or the Beijing Sub-Council of CCPIT. If it is to be held in another city, the local sub-council of CCPIT will deal with liaison and organizational work.

Countries wishing to hold an exhibition in China should forward plans to CCPIT giving details about date, place, size and exhibits.

(ii) Date of exhibition

Date of exhibition is decided by foreign exhibitors and the host department to their convenience through consultation.

(iii) Exhibition locations

Foreign exhibitions can be held not only in such large cities as Beijing, Shanghai, Tianjin, Guangzhou, but also in the capitals or commercially important cities in most of provinces in China. They include Wuhan (Hubei Province), Shenyang (Liaoning Province) and Dalian (Liaoning Province). With a view to meeting the needs of China's economic development and expanding economic and trade contacts between China and other countries, China opens more cities for exhibitions by foreign companies and institutions. These cities include Chengdu (Sichuan Province), Shijiazhuang (Hebei Province), Taiyuan (Shanxi Province), Xi'an (Shaanxi Province), Hangzhou (Zhejiang Province), Qingdao (Shandong Province), Nanjing (Jiangsu Province), Kunming (Yunnan Province), Changsha (Hunan Province) and Harbin (Heilongjiang Province), Shenzhen (Guangdong Province) etc.

(iv) Exhibits

Exhibitions are aimed at providing an opportunity for promoting technical exchange and boosting development of economy and trade. In order to make an exhibition a success, it is well to consider what is to be exhibited so as to meet the needs of China's economic readjustment. The list of exhibits proposed by the exhibitors will be passed on by CCPIT to the relevant Chinese administration for comments, before final decisions are made through discussions by both sides.

(v) Size of exhibition

Exhibition can be of any size. It is up to the requirement of foreign exhibitors.

Medium-sized and small specialized exhibitions are preferable to large ones. Past experience has shown that exhibitions displaying special equipment and sophisticated technology have yielded good results.

(vi) Preparatory work and the Beijing Exhibition Centre

When CCPIT receives the plans for the exhibition from the exhibiting company or country, it will consult the departments concerned about the date, place, size and exhibits. If the plans are approved, CCPIT will officially inform the exhibitors to go ahead with the preparatory work.

The exhibitors, after being so informed, may sent their personnel to Beijing or instruct their Embassy in China to discuss with CCPIT the preparatory wok for the exhibition and confirm decisions regarding name, date, size, number of people in the exhibition delegation, visitors, technical seminars and other matters.

During the preliminary visit, CCPIT may introduce the visiting personnel to the relevant departments to entrust the latter with preparatory work by signing contracts or agreements. For example, in Beijing, departments would include the Administrative Office of the Beijing Exhibition Centre, the Beijing Branch of the China National Foreign Trade Transportation Corporation, the Beijing Exhibitions Service Corporation and the Beijing Art Factory.

The Administrative Office of the Beijing Exhibition Centre is mainly in charge of site leasing.

The Beijing Branch of the China National Foreign Trade Transportation Corporation is responsible for transport within China of all exhibits and articles relating to the exhibition, excluding personal articles. Transport includes transit from ports, entry stations, airports and post offices to the exhibition site, and vice versa. The Corporation also takes care of international transport to return exhibits to the exhibitor's country. If requested by the exhibitors, it handles customs declarations and quarantine inspection reports of animals and plants in accordance with the Rules governing the supervision and control of the importation of goods for exhibitions by the Customs of the People's Republic of China. The Corporation organizes workers and leases equipment for moving exhibits in or out of the exhibition hall.

The Beijing Exhibition Service Centre was specially set up to serve foreign exhibitions in China. It offers interpreters, exhibit guides and other personnel and helps to purchase goods and materials, rent furniture, translate and print pamphlets and other publications, exhibition tickets and invitation cards. It arranges accommodations and tourist services for the members of the exhibitions.

The Beijing Art Factory undertakes the design and manufacture of stands, arranges exhibitions and provides carpenters, electricians, artists, sign painters, paper-hangers and other workers.

During the exhibition, all these departments have resident staff members at the exhibition office.

Outside Beijing, there are similar organizations to render such services for exhibitions held in other cities in China.

Mini-fairs may be held in larger hotels (see also section below on specialized mini-fairs)

(vii) Visitors to exhibitions and technical exchange activities

Technical personnel make up the majority of the visitors to foreign exhibitions. The number of visitors and visiting hours are settled by the exhibitors in consultation with the host department. The latter undertakes the printing of exhibition tickets, sends out invitations and does other organizational work.

Technical symposia may be conducted during exhibitions. The exhibitors may send specialists and experts to discuss technology and technical matters with their Chinese counterparts. The topics for discussion may be proposed by the exhibitors or selected by the Chinese side. The exhibitors are invited to provide the host organization with lecture notes or resumes, technical films and slides in advance so that the right audience may be invited to attend the symposia.

All sample books and other information materials must be transmitted through CCPIT and be inspected and approved. The host unit may be authorized to distribute most or part of the materials to technical personnel and trade personnel who ask for them.

(viii) Organizing business negotiations.

Business negotiations are arranged during the exhibitions. The negotiations may cover the sale of exhibits or the establishment of future trade relations.

CCPIT and its sub-branches as host units have no obligation to purchase exhibits, but may recommend them to end-users and trade corporations. For better results, the exhibit lists, sample books and other information materials should be submitted in advance to the Chinese side. If the Chinese end-users are interested in exhibits, they may entrust the Chinese trade corporations with negotiating and carrying out transactions with firms of the exhibiting countries. Past experience has shown that exhibits of advanced technology at competitive prices which meet China's needs have the best chance of being sold.

If exhibitors want to talk business with China's import and export corporations and industrial and technical departments about processing according to samples and designs, compensatory trade, co-production and joint ventures, they may request the host units beforehand to make the necessary arrangements.

(b) Technical seminars and symposia

Technical seminars and symposia may be conducted concurrently with or separately from exhibitions. They are generally small in scale and are usually held among technical personnel with a limited audience. Generally, there is no arrangement for business talks during the course of symposia and thus no immediate sale is possible. However, they help the Chinese to know advanced technology and equipment of foreign companies, which may lead to future business.

Normally, seminars and symposia held in China by foreign companies are organized by CCPIT. Now industrial and technical departments may also invite foreign technical personnel or experts to give lectures on a particular technical subject, if necessary. In this case, the inviting departments take care of all the organizational work involved.

D. INSTITUTIONS ASSOCIATED WITH FOREIGN TRADE

1. Ministry of Finance

The Ministry of Finance is an administrative organization under the State Council which controls state revenue and expenditure. Its main functions are:

(a) To enforce state economic, tax, and other policies;

(b) To work out the annual state budget and final fiscal report and formulate financial management and tax systems;

(c) To design financial and accounting system for enterprises and the system for investment allocation in capital construction projects;

(d) To manage state revenue and expenditure and supervise financing and financial activities in all localities and organizations of the country.

The Ministry has 11 departments which are:

General Tax Bureau: manages state tax revenues, formulates tax laws and tax control system, supervises the financial affairs of state-owned and collective-owned enterprises and negotiates and darfts international agreements on taxation.

Overall Planning Department: draws up long-term plans for state revenue and expenditure, administers internal and external debts and compiles financial statistics.

Budget Management Department: prepares the annual preliminary state budget and final fiscal report, examines budget fulfillment at the central and local levels, and formulates budgetary management system.

Department for the Financial Affairs of Industrial and Communications Enterprises: controls the financial affairs of state-owned industrial enterprises and institutions in such fields as coal, timber, petroleum, power, metallurgy, chemicals, light industry, textiles, machinery, railways, transport, post and telecommunications, civil aviation, nuclear industry, national defence, shipbuilding, aeronautics, materials supply and marketing, and urban and rural environmental protection; formulates related financial systems; participates in the examination and approval of projects using direct foreign investment in Chinese-foreign joint ventures, cooperative enterprises, compensation trade and leasing; and formulates related rules and regulations. It also oversees the financial dealings of Chinese enterprises in foreign countries, Hong Kong and Macau and formulates related rules for management.

Department for the Financial Affairs of Commercial, Trade and Financial Organizations: administers the financial affairs of enterprises and institutions in the fields of commerce, grain supply, distribution and marketing, foreign economic relations and trade, and financing and banking; monitors the profits surrendered; and formulates related financial systems.

Foreign Financial Affairs Department: administers expenditure involved in external activities and non-trade foreign exchange revenue and expenditure; manages loans by the World Bank and foreign governments; formulates related financial systems; determines the scale of expenses for people going abroad, and carries out other external activities.

Department for the Financial Affairs of Agricultural Enterprises: exercises control over the financial affairs of agricultural, husbandry, forestry, and hydro-electric power enterprises and institutions; manages agricultural aid funds and agricultural taxes; formulates related financial systems and methods for levying agricultural taxes, and supervises their implementation.

Department for the Financial Affairs of Cultural and Educational Administration: administers the financial affairs of enterprises and institutions in the fields of culture, education, science, health, family planning, sports, the press, radio and television broadcasting, seismology and oceanography, and the expenditure of administrative organs, public security and social welfare organizations; formulates related financial systems and standards of expenditure.

Department for Accounting and Management: exercises control over accounting at the national level and formulate decrees, rules, regulations and plans concerning accounting in respect of Chinese-foreign joint ventures and cooperative enterprises; handles the establishment of agencies of foreign accounting firms; directs and supervises the operations of public accountants and accounting consultants; approves registered public accountants, and issues certificates to practice.

Department of Treaties and Laws: formulates the principles of financial legislation; drafts major financial laws; and examines provisions included in the rules and regulations concerning financial matters published by other government organizations.

2. State Administration of Commodity Prices

The State Administration of Commodity Prices (SACP) is a government organization under the State Council responsible for commodity prices control at the national level. Its main tasks are:

(a) To oversee the unified administration and overall balancing of commodity prices in the country;

(b) To fix and adjust prices of industrial and agricultural products, work out standards of storage charges, transport and communication fees and trading fees for non-product transactions and foreign trading prices;

(c) To present proposals on policy, laws and regulations concerning prices, to draw plans for commodity prices for the reference of the State Council in making policy decisions;

(d) To formulate principles and work out measures to guide the fixing of prices for price administration offices at different levels. The SACP has 9 departments:

Agricultural Products Prices Department

Light Industrial Products Prices Department

Heavy Industrial Products Prices Department

Foreign Trading Prices Department

Commodity Prices Inspection Department

Prices Co-ordination Department

Policy Research Office

General Affairs Office

Price Research Institute.

Under SACP there are commodity prices bureaux or commissions at provincial, prefectural and county levels to administer matters of commodity prices. The main function of the local commodity prices units is to oversee the implementation of the state price policies, and to manage prices for commodities within the scope of their administration.

3. State Administration for Industry and Commerce

The State Administration for Industry and Commerce (SAIC) is a state organ dealing with economic affairs. Directly lead by the State Council, it supervises the business activities of industrial and commercial enterprises in China, including foreign investment enterprises and joint ventures. Specifically, the Administration takes charge of market control, registration for enterprises, advertisement and trade-mark affairs, and the drawing up and investigation of regulations governing economic contracts an collective and individual enterprises.

Local administrative bureaux for industry and commerce are set up in provinces, municipalities and autonomous regions.

In accordance with the "Administrative regulations governing registration of industrial and commercial enterprises" promulgated in 1982, all units and enterprises, whether state, collectively or individually-owned or operated, must register and apply for business licenses. Business operation is not allowed without licence.

Joint ventures are required to report to the Administration their changes in address, transfer of assets, increase or decrease or in transfer of equity capital, extension of contract term, and expiration or termination.

SAIC has the following departments:

(a) *Market Administration Department*: ensures market stability in urban and rural areas; supervises and controls prices and market activities; punishes illegal business transactions, speculation and profiteering; and controls the markets in urban and rural areas and those selling special goods;

(b) *Economic Contract Department*: supervises and examines the signing and fulfillment of economic contracts; settles by mediation and arbitration disputes arising from economic contracts; confirms the invalidity of economic contracts; and investigates and imposes penalties on illegal economic contracts;

(c) *Trademark Department*: handles the registration of trademarks, including foreign trademarks, at the national level, protects the exclusive use of registered trademarks; investigates and punishes breaches of the "Trademark law" (see chapter XII for details); and protects consumer's interests;

(d) *Advertisement Management Department*: manages advertising by domestic and foreign enterprises; supervises and controls advertising; and investigates and punishes illegal advertising;

(e) *Individual Economy Management Department*: manages and controls individual enterprise in urban and rural areas; implements government policy and decrees concerning individuals in the industrial and commercial communities; and guides the work of individual workers' associations;

(f) *Enterprise Registration Department*: handles matters relating to the registration of industrial and commercial enterprises, Chinese-foreign joint ventures, Hong Kong and Macau enterprises, solely foreign-owned enterprises, permanent establishments of foreign corporations, and individuals in handicrafts and commerce.

All equity joint ventures, contractual joint ventures, enterprises with investment from Hong Kong or Macau, solely foreign-owned enterprises or permanent establishments of foreign corporations must apply to the local administration for registration with the relevant documents within one month of their approval by the relevant government department. The issue date of the licence is the commencement date of the joint venture or enterprise.

V. FOREIGN TRADE OPERATIONS AND PROCEDURES

A. TYPES OF FOREIGN TRADE

Trade conducted by China with foreign countries may be divided into two types: agreement trade and non-agreement trade.

Trade agreements are classified into intergovernmental and non-governmental agreements.

The terms of the trade agreements may be adjusted with the mutual agreement of the parties.

1. Intergovernmental trade agreements

The majority of China's trade agreements take the form of bilateral governmental trade agreements, except for the agreement with the European Community (EC). By the end of 1992, China had signed governmental trade agreements or protocols with over 95 countries and EC.

This form of trade is normally negotiated once in every year, and agreements are signed by the responsible government organizations of the two parties. The Ministry of Foreign Trade and Economic Cooperation is the sole institution to sign governmental trade agreements on behalf of the People's Republic of China. After the agreement is signed, the actual business is carried out by the designated National Foreign Trade Corporations and other trading corporations concerned. The Ministry, however, has the responsibility of monitoring progress and giving instructions for adjustments, whenever necessary, so as to avoid largely unbalanced trade.

Intergovernmental trade agreements take three forms:

(a) Type A agreements

Type A agreements are accompanied by itemized commodity lists indicating commodities and exchange quota for each party together with the total volume of trade to be achieved, binding each party to achieve strict performance. Such agreements are made with a view to maintaining a balanced trade according to each party's requirements and commodities available for export.

(b) Type B agreements

Type B agreements are accompanied by itemized lists and binding exchange quotas covering only principal goods to be exchanged, and non-binding lists for secondary commodities. The agreement signed in 1953 between China and Sri Lanka is an example of this type.

Type A and Type B agreements are generally supplemented by payments agreements between governments. As a rule, such payments agreements specify the kind of currency to be used as unit of account and for settlement. Trade accounts are to be opened at each other's appointed banks for payment and settlement of trade and freight, insurance premiums, service charges and non-trade accounts advanced by exporters. As a matter of practice, only when a trade deficit over and above that of the allowable "swing" occurs at the stipulated time for settlement is it necessary for any payment either to be made in a convertible currency or for convenient sake to be deferred and carried over with interest to the next settlement. In order to keep such trade more or less in balance, the party having a temporary favourable balance of trade over and above that of the allowable "swing" should try to slow down its exports, and in the meanwhile the other party should try to do the opposite. As these types of trade do not involve any foreign exchange payments, they are often referred to as "open-account trade". For this reason, trade conducted under Type A agreements is in fact a kind of "package barter" between two governments while that under Type B agreements is also a kind of barter trade in nature, the difference between them being only that in the latter case only principal commodities to be exchanged are itemized in the attached commodity list, leaving the rest, which are to be adjusted from time to time according to each other's requirements and availability of commodities, at the discretion of the appointed trade agents.

The export lists of commodities for exchange that are attached to the trade agreements are decided upon through negotiation by the contracting governments.

This kind of so-called "open-account trade" is, in certain circumstances, conducive to promoting trade, for both parties might eliminate the necessity of using foreign exchange in payment of each transaction for each other's imports. However, this way of conducting trade tends to limit itself to the kinds of commodities that happen to meet each other's requirements. Failure to take account of this limitation may result in lopsided trade development to the detriment of bilateralism.

(c) Type C agreements

This type of agreement is accompanied only by a suggested list of goods to be exchanged with no binding force on either party and sometimes even without such a list at all. The trade agreement signed between China and Thailand falls into this type.

Type C agreements are much looser than types A and B agreements, having no binding force whatsoever on either party in so far as the matter of exchangeable commodities is concerned. As each transaction is to be concluded individually according to the requirements and availability at the actual time of business, the trade organizations of either party are given a much freer hand and much larger margin of action with regard to both the signing and the execution of the contracts. If no payments agreement has been signed and no specific currency has been named for payment, the terms of payment, including the currency to be used, will be dealt with individually at the time of concluding each transaction.

2. Non-governmental trade agreements

In addition to the intergovernmental trade agreements mentioned above, Chinese trade organizations also conclude what may be called non-governmental trade agreements with business and economic groups of other countries having no diplomatic relations with China. Such agreements are binding on the contracting parties and serve as standards of practice between them. Among this kind of agreement, the most notable was the Liao Cheng-chih-Takasaki Memorandum signed between China and Japan, with the former representing China's trade organizations and the latter representing a group of Japanese business enterprises. The Memorandum set forth the kinds of commodities to be exchanged and the total volume of trade to be attained, binding both parties to act through each trade organization in accordance with the suggestions included by negotiating trade contracts. The signing of the Memorandum and the business concluded later under the trade agreements played an active role in the development of friendly trade, thus facilitating friendship and finally the establishment of diplomatic relations between the two countries.

However, non-governmental trade agreements may also take place after the establishment of diplomatic relations and even after some kinds of governmental trade agreements have already been in existence. One example is the Sino-Japanese Long-term Trade Agreement, which, with the support of two Governments, was concluded on the basis of the substance of the Joint Declaration of China and Japan and the Trade Agreement between the two Governments.

3. Non-agreement trade

This form of trade, often referred to in China as "payment" trade, accounts for the greater part of China's total trade with other countries and regions. Characteristic of this trade is that business is carried out through negotiations on the basis of each other's needs by concluding separate contracts specifying terms and conditions of sales or purchase.

This kind of business is generally handled by China's various trading corporations, with which foreign companies or firms can conclude transactions for commodities agreed upon by both sides.

B. SELLING TO CHINA

China practices planned economy with market economics, and import is controlled by the State. However, China follows international trade norms. Foreign companies wishing to sell to China are advised as follows:

1. Knowing China's import trends

Commodities to be imported by China are based on the needs of its economic development at different times. In the past, China's imports mainly consisted of equipment and heavy machines, supplemented by food-grains. However, during the past 13 years, this pattern of imports has been gradually changed with emphasis on advanced technology, key equipments and essential materials for industrial and agricultural production.

With sufficient foreign reserves and speedy economic requirements, China has an ambitious purchase plan during the 1990s. China is ready to import goods during the 8th Five-Year Plan (1991-1995), worth $US350 billion, which is almost equal to the total import value in the previous 10 years. The import emphasis is on advanced equipments, key technology for agriculture, energy, transportation, textile, telecommunication, electronics and some essential raw materials for agricultural and industrial production as well as for people's daily life needs.

Foreign companies are advised to follow closely China's economic policies and developments.

2. Approaching the right corporation

Before China's economic reforms, the China National Import and Export Corporations each specializing in different line of business under MOFTEC and their local branches were the only ones permitted to do foreign trade. This situation has changed since foreign trade reform began in 1979. Now foreign trade companies at both ministerial and local level have been organized in large numbers. These newly set-up companies have decision-making powers to import goods they need with their own foreign currency retained from their exports. In the meantime, some industrial enterprises, government and research institutions and other organizations have also been approved to handle foreign trade and have power to decide what to buy with their own retained foreign currency. Those newly approved foreign trade companies normally conduct import and export without going through the China National Import and Export Corporations.

Therefore, the decentralization in foreign trade system has enabled more Chinese corporations to deal in foreign trade. And this new developments enable foreign companies to do trade with China on a wider choice of trading firms. Now foreign businessmen may directly contact either China National Import and Export Corporations or their local branches or the above-mentioned new foreign trade companies.

The information about all the Chinese foreign trade corporations can be obtained from China Council for the Promotion of International Trade (CCPIT), and one may also approach the Commercial Section of the Chinese Embassy stationed abroad.

3. Contacting consultant companies

Consultant companies are set up throughout China. Those companies provide good consultancy service, helping foreign companies to contact Chinese trading partner and giving consultations on trade, economic and technical cooperation between Chinese and foreign enterprises. These consultant corporations maintain close contacts with various industrial enterprises and users and are therefore aware of their requirements for import and economic and technical cooperation. The establishment of business relations with Chinese corporations through consultant companies may save time and trouble and bring about quicker results.

4. Business visits to China

The foreign company may also be invited by the Chinese trade corporation for business negotiations when necessary. The invitation by the Chinese trade corporation may be sent directly to the invited company or via the Commercial Section of the Chinese Embassy. If the invitation is initiated by the Chinese, the Chinese side always makes clear such points as the number of persons invited, time and duration of visit and responsibility for the trip's expenses. After receiving an invitation, the invited company should notify the Chinese side of the number of persons on the mission, departure date and flight number about one week before the journey so that the Chinese side will be able to arrange for accommodations and make other preparations relating to the trip in China.

Entry visas are granted against invitation either at the local Chinese Embassy or at the China International Travel Service in Hong Kong.

5. Contacting Chinese trade mission or trade corporation abroad

Every year a number of Chinese trade missions are dispatched to foreign countries to make purchases. In most cases, or where possible sale and purchase are combined. Foreign businessmen should seize the chance to get in touch with them because negotiations with these visiting missions may bring about transactions without involving a trip to China. Even if no transaction is concluded immediately, business ties will be established, which services to pave the way for future business.

Many of industrial foreign trade enterprises in provinces, municipalities and autonomous regions have set up their branches or representative offices abroad. It is very convenient for foreign companies to contact them.

6. Inviting Chinese trade mission

Foreign companies are advised to provide all necessary information about the products they intend to sell to China. The information is better in Chinese language, as some Chinese technicians and experts do not understand foreign language. It is especially important for them to make the catalogue in Chinese language, when foreign companies intend to sell products as equipment, machinery, plants and technology with complicated specifications.

Foreign companies are also advised to invite the Chinese buyer to visit their plant or factory and demonstrate operation, as this would enable the Chinese buyer to have confidence in and better idea of their products.

It is suggested that invitation to be sent to the relevant Chinese trade corporations should indicate time, duration of the visit and number of people to be invited.

7. Communication facilities

Now almost every foreign trade corporation throughout the country has facility of IDD line, fax and telex equipment. The communication with Chinese corporations is of no difficulty. Correspondence in both Chinese and English is available.

Except for negotiations for the sale of plants, equipment, big machinery or, food-grains and cotton, a large amount of China's import business is done by means of correspondence. Foreign companies that have traded with China and are familiar with its trading terms and conditions usually discuss as well as conclude transactions with the Chinese trade corporations through correspondences. Once the transaction is agreed upon, the contract is normally prepared by one party and sent to the other for signature and return.

8. Holding exhibitions, technical seminars and symposia in China

Generally speaking, exhibitions help to publicize participants' products and provide opportunities to contact end-users in China directly. They help to pave the way for future business.

About procedures of holding exhibitions in China, please refer to chapter IV.

Organizing business negotiations

Business negotiations are arranged during the exhibitions. The negotiations may cover the sale of exhibits or the establishment of future trade relations.

CCPIT and its sub-branches as host units have no obligation to purchase exhibits, but may recommend them to end-users and trade corporations. For better results, the exhibit lists, sample books and other information materials should be submitted in advance to the Chinese side. If the Chinese end-users are interested in exhibits, they may contact exhibitors or entrust the Chinese trade corporations with negotiating and carrying out transactions with firms of the exhibiting countries. Past experience has shown that exhibits of advanced technology at competitive prices which meet the needs of Chinese buyers have the best chance of being sold.

If exhibitors wish to discuss business with China's import and export corporations and industrial and technical departments about business like processing according to samples and designs, compensatory trade, co-production and joint ventures, they may request the exhibition organizers beforehand to make the necessary arrangements.

Technical seminars and symposia

Technical seminars and symposia may be conducted concurrently with or separately from exhibitions. They are generally small in scale and are usually held among technical personnel with a limited audience. Generally, there is no arrangement for business talks during the course of symposia and thus no immediate sale is possible. However, they help the Chinese to become acquainted with the advanced technology and equipment of foreign companies, which may lead to future business.

9. Chinese commodities fair at Guangzhou

General introduction to the Fair

Foreign exporters may find opportunities to conclude export deals at the Chinese Export Commodities Fair which is generally referred to as the Guangzhou (Canton) Fair. In the course of further restructuring the foreign trade system, China has shortened the Fair duration from 15 to 10 days in 1993.

The spring session lasts from 15 to 25 April and the autumn session from 15 to 25 October.

The Guangzhou Fair is held primarily to promote the export of Chinese products. However, Chinese trading corporations at the Fair also purchase goods such as machinery, steel, fertilizers, food-grains, textile materials and other commodities for industrial and agricultural production from foreign businessmen. Recently negotiations on ventures have also been conducted.

There are 19 trading delegations participating in the Fair. They are:

Cereals, Oils and Foodstuffs Trade Delegation

Textiles Trade Delegation

Light Industrial Products Trade Delegation

Native Produce and Animal By-Products Trade Delegation

Arts and Crafts Trade Delegation

Silk Trade Delegation

Metals and Minerals Trade Delegation

Chemicals Trade Delegation

Machinery Trade Delegation

United Trade Delegation of Instruments, Technology and Economic Corporation

Machinery and Equipment Trade Delegation

United Trade Delegation of the XINSHIDAI Trade Delegation

Medicines and Health Products Trade Delegation

Joint Ventures Using Chinese and Foreign Investment Trade Delegation

Electronics Trade Delegation

United Trade Delegation of Nonferrous Metals and Metallurgical

Comprehensive Trade Delegation

Comprehensive Trade Delegation of Service and Culture

Trade Delegation of Special Economic Zones.

Transactions are to be negotiated and contracts signed by these trading delegations at the Fair, there are various sales departments formed by the trading groups dealing in the commodities within their scope and their export commodities are put on show throughout the Fair. Traders can make selections for their purchases against samples, hold face-to-face negotiations with trading delegations and meet technicians and experts from industrial sectors. In this way, business and technical problems in transactions may be easily solved.

The Fair enables businessmen to have wider contacts with the various foreign trade corporations, manufacturers and end-users in China. It is one of the most important channels through which foreign businessmen find it convenient to trade with China.

In addition to trade norms, certain practices that are internationally accepted are also introduced. Also accepted are deferred payment, D/P, commission/discount, neutral packing, acceptance of buyer's trade mark and acceptance of buyer's samples or materials for processing. Business on a compensation basis, assembling business and joint venture business can also be discussed at the Fair.

How to obtain an invitation to the Fair

Foreign businessmen are required to obtain an invitation if they wish to attend the Guangzhou Fair. The invitation cards are normally issued by the Guangzhou Foreign Trade Centre, but invitation for old clients is generally initiated by the China National Foreign Trade Corporations.

New clients may apply to any of the Chinese foreign trade corporations concerned (corporation that the applicant may have business with) for an invitation, if they desire to attend the Fair. The application should be sent out at least one month before the opening date of the Fair, specifying the name of the applicant's firm, address, person in charge and line of business. The Chinese corporation concerned will refer the application immediately to the Chinese Export Commodities Fair (address: 17 Liu Hua Road, Guangzhou, China, Post code: 510014, Telex: 44465 FAIR CN), who is responsible for issuing invitation card. Clients may ask for an invitation from the Commercial Section of the Chinese Embassy in their country if time is too short for them to apply to the Chinese foreign trade corporations in China. Invitation cards may also be available from China Travel Service Company stationed in the country of applicants, who provides services such as travel and hotel arrangements. Visa to China can be readily obtained from the Chinese Embassy stationed in the country of applicants. If applicants prefer to obtain the invitation from the Fair directly, they are welcome to contact the Foreign Liaison Department of the Fair.

Upon their arrival in Guangzhou, Fair guests are requested to register at the Liaison Office and/ or Reception Group, located in the hotels. A silk ribbon will be given to each Fair attender, which services as a pass for free entry into the Fair Building.

Interpreters and staff members of the Fair are available at every hotel or guest house.

Shuttle bus service is provided between the Fair and the hotels at opening and closing hours.

Taxi are readily available from the Fair to the guest house or hotels.

10. Specialized mini-fairs

In recent years specialized mini-fairs have been held frequently in China by foreign trade corporations at central and local levels. The mini-fairs deal in individual specialized commodities. Commodities of the same kind converge in the same place, with a wide range of specifications available for traders. Buyers, especially those in specialized lines of business, find it convenient to make their selections.

Information about mini-fairs can be obtained from either the head offices of the national foreign trade corporations or the Commercial Section of the Chinese Embassy in residential country abroad.

This information is also given in the English language magazine, *"China's foreign trade."*

11. Advertising

China now accepts orders for advertisements in China from foreign companies and manufacturers. In recent years, a number of news media, and soliciting advertising have sprung up. They include magazines, newspapers, billboards, department store display windows, television, radio, closed-circuit video networks, hotel desk directories, commemorative booklets and light boxes. Advertising corporations have also been established in some provinces and municipalities.

China National Foreign Trade Advertising Association is composed of local foreign trade advertising corporations, Department of Exhibition and Publicity of the Guangzhou Foreign Trade Centre, Department of Public Relations of CCPIT, International Trade and Advertising Department of Economic and Trade News as well as China Advertising Co., Hong Kong, and Advertising Department of Nam Kwong Trading Co., Macau. It organizes, promotes and coordinates advertising related to the export commodities of its member corporations, and handles advertising from foreign companies.

Foreign exporters and manufacturers who intend to make their products known to the Chinese may contact:

China International Advertising Corporation

Address: 19, Shaojiu Hutong, Wangfujing Street,
Beijing, China
Post Code: 100006
Cable: 7736 Beijing, China
Telex: 222622 CIACO CN
Telephone: 86-01-5128602
Facsimile: 86-01-6015971

C. BUYING FROM CHINA

China's export procedures are identical to that practiced in other countries. Most of the Chinese corporations handle both import and export business. Foreign trade companies have no difficulty to carry out business with China.

1. Business by means of telecommunications

Communications by means of letters, cables and telex and fax are most popular in business. The Chinese trade corporations normally make inquiries or offers by those means. Foreign businessmen, under normal conditions, may approach Chinese foreign trade corporations by sending letters, cables, telex or fax. Foreign buyers are advised to specify in their inquiry the commodity (commodities) in which they are interested and give full particulars, including specifications, quantity, quality requirements and time of delivery. If the commodity is available, the Chinese trade corporation usually will make an offer soon after it has received the buyer's inquiry. The reply normally will be made by fax, telex or cable. The Chinese corporations have greatly improved efficiency and service.

2. Contacting the right corporation

Since the restructuring of the foreign trade system, new trading corporations have been established in a large number. Certain commodities handled by the national foreign trade corporations before the reforms have now been taken over by these new trading corporations, partially or entirely. Foreign buyers are advised to find out which trading corporation to approach before they make contact. For example, coal, which used to be exclusively handled by the China National Metals and Minerals Import and Export Corporation is now handled by both China National Metals and Minerals Import and Export Corporation and China National Coal Import and Export Corporation under the Ministry of Coal Industry, with latter playing main responsibility to sign trade agreements with foreign companies. It is very important for foreign companies to be aware of business line of Chinese foreign trade corporations so that they can approach right ones for business.

3. Business visits to China

Foreign buyers may ask to visit China if the commodities to be purchased are machinery or equipment or of big volume requiring detailed discussions. They may also be invited by Chinese trade corporations to hold negotiations in China, when necessary.

4. Buying from visiting trade missions abroad

In recent years, more and more Chinese trade missions have been sent abroad to promote the sale of Chinese products. These missions may be from national foreign trade corporations or from local trade corporations or import and export corporations of industrial enterprises. Foreign businessmen may hold trade negotiations with these missions or established business ties with them.

5. Exclusive distributors

In promoting sale of exports, the Chinese foreign trade corporations may arrange for exclusive distributorship with reliable foreign importers.

If a foreign importer or a merchant is appointed as an exclusive distributor by virture of an agreement, the importer or the merchant is given the exclusive right to sell a product or products for a certain period of time within a designated district or region. In accordance with the stipulations in the agreement, a designated exclusive distributor is obliged to guarantee a certain quantity of sales and provide the Chinese supplier periodically with market reports within the district or region.

6. Sales agencies

In order to promote sales of new products, the Chinese foreign trade corporations may arrange sales agency agreements with certain foreign business concerns. These agreements fall into sole and common agencies.

Sole agency agreements give the designated agency exclusive rights to the sale of China's products in a specific country or area. The agencies may either place orders on their own account or just procure goods and take responsibility to market them according to the conditions and terms of sales agreement or sales contracts between the two parties. In the former case, the agencies themselves are buyers, while in the latter they act only in the capacity of middlemen, but whichever the case, the designated agencies are entitled to agreed commissions.

Of such sole agency agreements signed between China's foreign trade corporations and foreign concerns, some stipulate that the principal forsakes the right to make any direct sales in the designated districts, while others retain the right. However, the amount of commissions would differ according to the terms in the agency agreement to be claimed by the agency. The Agencies are bound by the agreements to refrain from the principal regularly with all necessary market reports.

Common sales agency agreements differ from those for sole agencies that the designated agencies do not enjoy a sales monopoly of the products. In other words, under common sales agreement, the principal retains the right both to sign other such agreements with other concerns and to make direct sales in the same district within the validity of prior agreements.

7. Processing for re-export

Various Chinese foreign trade corporations are also actively engaged in re-export business with a view to bringing productive potentialities in full play and to bringing more foreign exchange receipts. There are two principal modes of doing this business: one is to import raw materials and semi-finished products, subsidiary and spare machine parts, packing materials etc. and to have them processed and assembled into final marketable products for re-export. The other is to accept customers' orders, with materials or parts partly or fully supplied from abroad or with the technical know-how and drawings furnished by the customers, for processing and assembly into final products in accordance with the specifications and requirements given. These two modes of re-export business have been in ever wider use in recent years.

8. Brand name orders

The Chinese foreign trade corporations now accept foreign trade names or foreign trade marks at the request of foreign firms or importers, so long as their brand names or trade-marks do no harm to China.

In addition, China also accepts neutral packing.

9. The Chinese export commodities fair at Guangzhou and mini-fairs

The Chinese Export Commodities Fair (CECF) mainly conducts export business. In addition, Chinese import and export corporations also organize specialized mini-fairs in Chinese major cities. Mini-fairs of this kind centre on certain specific commodities and mainly deal in export business. (For further details, see section B9 of this chapter). Foreign importers have opportunities to purchase at both CECF or mini-fairs.

D. SALES AND PURCHASE CONTRACTS

1. Forms of contracts

Two forms of contracts are in use in China's import and export business. One is the formal contract with all necessary details set out and the whole set of terms and clauses. This form is usually adopted for bulk commodities or important materials or equipment, or with new customers. The other is the sales confirmation, which is comparatively simple in clauses. It is used for transactions of small value and with old customers who are already familiar with China's trade terms and clauses. The sales and purchase contracts may vary in form and content with different commodities and customers and other conditions. But the basic principles are the same.

2. Price terms

China generally adopts C.I.F terms for its imports. Yet, China's imports of bulk goods or full-boat cargo are mostly done on F.O.B basis. For its exports, China prefers C.I.F terms. The primary consideration to do so is to make use of its own transport facilities and to promote its insurance business. It can also help reduce import or export cost.

3. Terms of payment

(a) Payment by letter of credit

Payment by letter of credit is widely used in China's foreign trade of both import and export. Most letters of credit required in its contracts are confirmed, irrevocable, payable at sight as practised internationally. In order to simplify the procedure and expedite payment settlement, the Chinese usually ask buyers to open letters of credit payable at sight which are transferable to allow shipment by installments.

However, China also accepts 30-day, 60-day, 90-day and up to 360-day letter of credit to promote its export under certain circumstances.

(b) Documentary collection

In practice, documentary collection through the bank is not widely used in China. However, in order to comply with the trading practice of certain regions, or to facilitate financing and help to bring down the buyers' expenses sometimes it may also consent to this method in export business. But as greater risks are involved in this mode of payment than in the usual practices such as payment by letter of credit, China confines itself to documents against payment at sight in order to ensure safety in payment.

(c) *Other means of payment*

China uses instalment and deferred payment in its imports, mainly in the case of heavy-duty machinery, equipment, vessels and other goods involving a large amount of foreign exchange.

These means of payment are also used by China in selling its machinery and equipment and other goods with a high value.

4. Currency for quotations and settling payment

The currency used for price quotations and payment making in trade under clearing accounts between China and other countries is designated in the payment agreement. Where trade payments are to be settled in convertible currency, the specific currency is chosen by negotiations between the buyer and seller.

Documents required for imports

Document	*Number of copies*	*Issuing body*
Import licence	1	Foreign Trade Administration, Ministry of Foreign Economic Relations and Trade
Customs entry	3	Customs
Commercial invoice	6	Exporter
Documentary credit	1	The Bank of China or authorized bank
Certificate of origin	6	Foreign Institution in charge
Health/sanitary certificate	6	Foreign Commodity Inspection Body
Quality control certificate	6	Foreign Commodity Inspection Body
Bill of lading/air waybill	6	Shipping company/airline company
Packing list	6	Exporter
Insurance certificate	6	Insurance company
Required measurement system:	metric	
Preferred terms of delivery:	FOB, C&F, CIF	

VI. FOREIGN EXCHANGE MANAGEMENT

A. BANKING SYSTEM IN CHINA

The China's banking system consists of the central specialized banks (commercial banks), non-banking institutions and credit cooperatives. There are six banks in China:

- The People's Bank of China (PBC);
- The Industrial and Commercial Bank of China (ICBC);
- The Agricultural Bank of China (ABC),
- The Bank of China (BOC);
- The People's Construction Bank of China (PCBC);
- The Bank of Communications (BC).

The above-mentioned banks are all state-owned and have their branches throughout China.

1. People's Bank of China

People's Bank of China was established in 1948. Since the Chinese Government took it over under control, PBC has all along exercised central bank functions and played the leading role in managing the financial activities and formulating financial policies, regulations of the country.

2. Industrial and Commercial Bank of China (ICBC)

ICBC was established in Beijing on 1 January 1984. As a bank specialized in urban banking business, ICBC mainly absorbs savings deposits from urban residents and corporate deposits by industrial and commercial enterprises, grants working capital and fixed assets loans to such enterprises in the light of the Government's economic and industrial policies and handles the settlement of cash payment and account transfers between various units. ICBC has 30,000 branches and sub-branches with 470,000 staff throughout the country. Its total assets were 562 billion RMB Yuan at the end of 1988.

3. Agricultural Bank of China (ABC)

The Agricultural Bank of China (ABC) is a bank specializing in China's rural finance. It is an economic entity with the status of a general bureau directly under the State Council. It has 51,000 branches and sub-branches and business offices throughout the country with total staff 450,000 and its clients cover 800 million rural population. Its total assets reached 356.7 billion Yuan by the end of 1989.

Business scope is as follows:

- Handling deposits from rural organs, communities, army, enterprises, institutions, rural cooperative organizations, collective and individual business sectors and savings from individual;
- Lending loans to state-owned agro-enterprises, rural township enterprises, collective economic organizations, supply-marketing cooperatives, farmers and individual business households;
- Conducting transfer and cash settlements, acceptance and discount of commercial notes;
- Providing trust loans, and entrustment, agent and leasing services;
- Handling international business;
- With approval, issuing financial bonds, providing agent services of issuing bonds, stocks and their transfers;
- Taking up financial deposits and gold, silver buying or selling business.

4. People's Construction Bank of China (PCBC)

The People's Construction Bank of China was founded on 1 October 1954 and has now developed from a supervisory bank solely managing government investment and allocating treasury funds for the country's capital construction into a comprehensive bank performing multi-functions with stress on medium and long-term project financing. PCBC has a vast network across the country with a total staff of 140,000. By the end of 1988, its total assets reached 339.4 billion RMB Yuan.

5. Bank of Communications

The Bank of Communications was founded in 1908. In April 1987 it was restructured and the head office was moved from Beijing to Shanghai. It is a nation-wide comprehensive bank operating in parallel with the other specialized banks in China. It handles not only various kinds of financial business in both local and foreign currencies, but also non-financial traditional business such as insurance, real estate, securities and stocks. It has 44 branches and sub-branches in the mainland in addition to its existing Hong Kong branch. By the end of 1988, its assets reached 38.5 billion RMB Yuan.

6. Bank of China (BOC)

(a) Background:

Bank of China, the sole bank engaging in international banking activities, is the State specialized foreign exchange bank of the People's Republic of China.

The bank has a history of 74 years. Its predecessor was Bank of Great Qing, a government bank of the Qing Dynasty which was overthrown in October 1911 by the bourgeois democratic revolution. In January of the ensuing year. Bank of Great Qing was reconstructed to become the Bank of China at the same premises in Shanghai under the section of Dr. Sun Yat-sen, Interim President of the Republic of China. It had performed the functions of a state bank until 1928 when turned into an international exchange and remittance bank of old China.

After the liberation of Shanghai in May 1949, Bank of China was taken over by the people's revolutionary regime. Following the founding of the People's Republic of China, the Head Office of Bank of China was moved to Beijing, capital of the country, in November 1949. The Chinese Government designated in 1953 Bank of China as a specialized foreign exchange bank with a special permission of the state and under the leadership of the People's Bank of China. To keep up with economic structural reforms and the opening of the country to the outside world, the State Council approved in March 1979 the Bank of China as an economic entity under its direct leadership.

(b) Business scope:

The Bank of China undertakes the following business:

- International settlements in connection with foreign trade and non–trade transaction;
- International inter–bank deposits and loans;
- Overseas Chinese remittances and other international remittances;
- Deposits and loans in foreign currencies, and with the approval of the People's Bank of China, deposits and loans in Renminbi which relate to foreign exchange business;
- Buying and selling of foreign exchange, including foreign currencies;
- Buying and selling of gold in the international markets;
- Organizing and participating in international syndicated loans;
- Investing singly by or jointly with others in banking business, finance companies and other enterprises in foreign countries and in Hong Kong and Macau regions;
- Issuing bonds and securities in foreign currencies with the authorization of the State;
- Providing trust and advisory services;
- Engaging in other kinds of banking business approved or entrusted by the State.

Branches and offices of the Bank of China set up in foreign countries and in the Hong Kong an Macau regions may engage in all kinds of banking business which are permitted by local laws an regulations.

(c) Financial capability:

The Bank now has a total capital of 18 billion yuan. By the end of 1991, the total assets amounted to 1,107.739 billion yuan, the balance of deposits to 719.304 billion yuan, and the balance of loans, securities and investments to 508.99 billion yuan. The year-end balance of overseas deposits of 1991 stood at 42.15 billion US dollars.

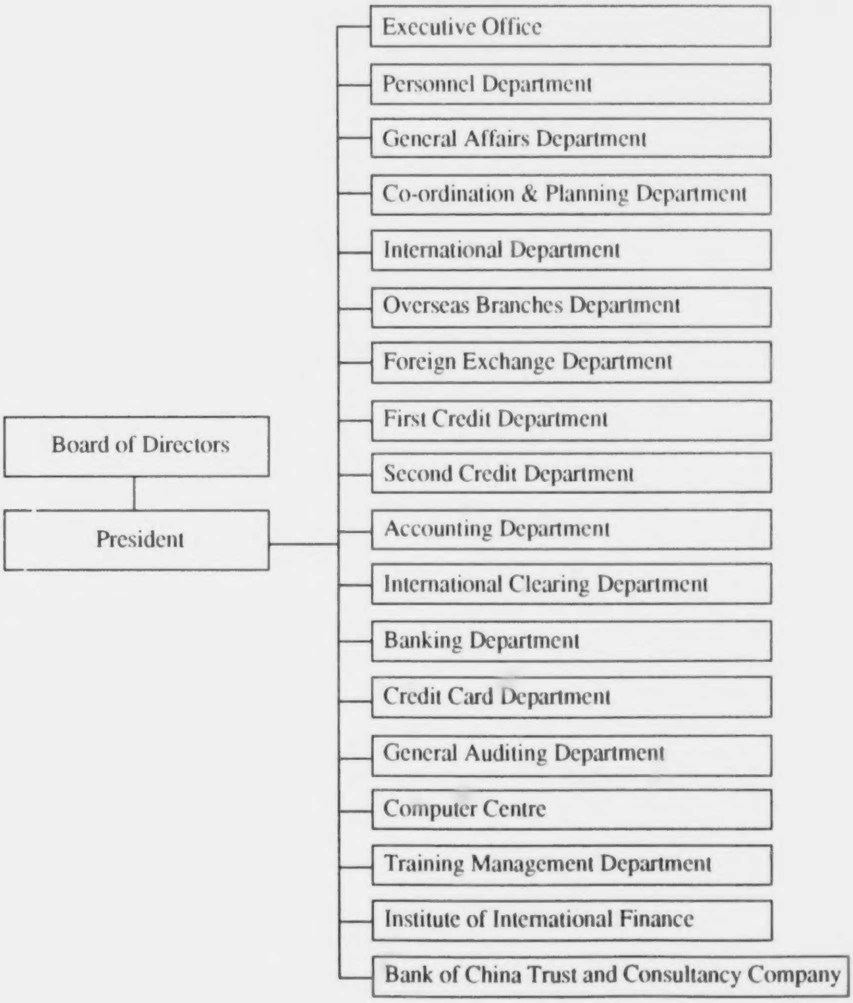
The Bank of China is a major window for fund-raising for the country. Over the past 11 years, the Bank has raised tens of billions of US dollars from international financial markets in diverse forms of government loans, export credits, mixed loans, syndicated loans, bilateral bank loans. The funds raised by the Bank abroad accounted for one-third of the total utilized by the country.

The Bank of China is a big lender and investor. The balance of its loans and investments increased from $US890 million at the end of 1978 to $US23.83 billion at the end of 1990. The loans mainly went to the State key projects involving energy, power, telecommunications, raw materials and ocean-going transport and civil aviation and export-oriented enterprises for technical transformation.

The Bank also performs a role of multi-functional bank. The Bank of China Trust and Consultancy Company, a wholly-owned subsidiary of the Bank has offered diverse forms of services in respect of investment, joint venture, international leasing, guarantee and witness, and trust deposits since 1980. The total assets of BCC Trust and Consultancy Company amounted to 16.7 billion yuan by the end of 1990.

The Bank began to go into capital markets in 1984 by issuing 20 billions yuan public bonds in Japan, and later in Frankfurt and Singapore.

(d) Organization of the Bank of China and its functions:



Board of Directors
President
Executive Office
Personnel Department
General Affairs Department
Co-ordination & Planning Department
International Department
Overseas Branches Department
Foreign Exchange Department
First Credit Department
Second Credit Department
Accounting Department
International Clearing Department
Banking Department
Credit Card Department
General Auditing Department
Computer Centre
Training Management Department
Institute of International Finance
Bank of China Trust and Consultancy Company

International Clearing Department

This Department studies and formulates rules and measures for international settlement, controls the international settlement of the whole bank, handles the Head Office's accounting business as well as the settlement of accounts with agency banks, directs and coordinates the accounting and clearing work between domestic and overseas branches, associate banks and agency banks.

International Department

This Department exercises an overall management of trade and non-trade international settlements, makes decisions on the establishment of correspondent relationships and sets forth related guidelines, proposes the opening of overseas offices and controls their business activities, and offers consultancy on matters pertaining to financing and legislation.

Foreign Exchange Department

This Department takes charge of the unified operation of foreign exchange fund of the state and that of the bank, deals in bullion, bonds and call monies in international markets and in interbank money markets, organizes and raises foreign funds, and conducts forward exchange transactions on behalf of customers.

First Credit Department

This Department is in charge of different types of loans in Renminbi and foreign currencies to import and export corporations, enterprises involved in foreign dealings, Chinese-foreign joint ventures and other relevant units, provides guarantee for projects to be financed with foreign loans, and supervises credit business of all domestic branches.

Second Credit Department

This Department deals in loans to large energy projects such as coal, oil, electric power and others including their examination, approval, issuance, supervision and management, handles buyer's credit for export and import and governmental mixed loans, and acts on behalf of the State as a package borrower to finance large scale projects.

BOC Trust and Consultancy Company

This Department makes investment for itself or on behalf of customers and handles trust deposits and loans, engages in international leasing, provides guarantees and stands surety for customers, floats bonds on international financial markets, issues stocks and corporate bonds on behalf of domestic enterprises, and provides various consultancy services.

Banking Department

This Department handles trade and non-trade international settlements as well as all international retail banking business, including local and foreign currency deposits, loans and remittances, bill negotiation and collection, sales of RMB traveller's cheques, sales and encashment of traveller's cheques of foreign banks, and handles the conversion of foreign currencies, purchase and sale of foreign bank-notes and other business entrusted by customers.

(e) Business relations with foreign banks

Bank of China, being a state specialized foreign exchange bank, serves as a significant window for China's financial and trade activities with the outside world, and functions as a main channel for financial exchanges with the rest of the world. Bank of China shoulders many important tasks entrusted by the State in implementing the open policy, and especially in organizing and utilizing foreign funds. In the past years, Bank of China maintained broad business cooperation and personal contacts with financial, trade and industrial circles of many countries. At present, the Bank has agency relationships with 4,000 branches and sub-branches of 1,235 foreign banks located in 155 countries and regions. At the same time, the Bank deals frequently with 220 big banks in the interbank money markets, both ways in the light of mutual requirements. Such broad business ties have greatly facilitated the trade and non-trade international settlements as well as the economic and cultural exchanges with these countries and regions, thereby boosting information flow and economic cooperation.

(f) Bank of China Group

The Bank of China Group in the Hong Kong-Macau region (hereinafter briefly referred to as BOC Group) is an important component part of Bank of China. BOC Group includes Bank of China, Bank of Communications, Nanyang Commercial Bank, Ltd., Kwangtung Provincial Bank, Sin Hua Trust, Savings & Commercial Bank, Ltd., China & South Sea Bank Ltd., Kincheng Banking Corporation, China State Bank Ltd., National Commercial Bank Ltd., Yien Yieh Commercial Bank, Posang Bank Ltd., Hua Chiao Commercial Bank Ltd. in Hong Kong and Nan Tung Bank Ltd. in Macau.

Bank of China Hong Kong-Macau Regional Office is an overseas representative institution of the Head Office of Bank of China and is also a leading body of the BOC Group in the Hong Kong-Macau region.

BOC Group has experienced a rather long history of banking operation in the region and holds an important position in the local financial community. With its branches and sub-branches amounting to 278 and its staff to nearly 10,000. BOC Group ranks the second largest, next to the Hong Kong and Shanghai Banking Corporation Group in Hong Kong.

While expanding basic business like deposits, loans and remittances in recent years, BOC Group has been vigorously diversifying business lines.

B. FOREIGN EXCHANGE CONTROL

1. Centralized management

China practices centralized control and unified management of foreign exchange by the State in accordance with the Interim Regulations on Foreign Exchange Control of the People's Republic of China issued by the State Council on 18 December 1980. Under the State control, no domestic organizations, enterprises and foreign trade corporations are permitted to possess foreign exchange, deposit foreign exchange abroad, offset foreign expenditure against foreign exchange income, borrow or open foreign exchange account with banks in and out of China unless approved by the State General Administration of Exchange Control (SGAEC), a government institution under the leadership of the People' Bank of China. In addition, all foreign exchange earnings from exports by foreign trade corporations have to repatriated and rendered to the Bank of China, unless a specific exception is granted by SGAEC. On the other hand, domestic organizations, enterprises and foreign trade corporations have to apply with the State for foreign currency for their imports, which can only be possible when the foreign currency is approved by the State. And an approved import plan is justified and possible on the State import principles.

Before 1979 foreign exchange was managed by the Bank of China.

2. Foreign exchange control authorities

Before 1979, People's Bank of China (which functions as China's central bank) was responsible for the formulation of exchange control policies and decrees, while the Bank of China, designated by the State as the specialized foreign exchange bank, took care of the routine work. In March 1979, the State Council approved the setting up of the State General Administration of Exchange Control and placed it under its direct leadership. Branch offices of the Administration have been set up in the provinces and municipalities.

The State General Administration of Exchange Control is now the organ responsible for the formulation of policies and decrees in relation to foreign exchange control for the unified management of foreign exchange, for supervising trade and non-trade payments in foreign currency, for ensuring an overall balance in the plans for exchange incomes and outlay and for quoting the exchange rates.

As the Bank of China is the specialized foreign exchange bank designated by the State and it provides foreign exchange for imports based on import licences and with the approval of SGAEC. Other banks and financial institutions, including branches of foreign banks, are allowed to handle foreign exchange transactions within a limited scope and with the approval of SGAEC.

3. Liberalizations of foreign exchange control

The Chinese Government has taken a number of measures to relax its control over foreign exchange in order to encourage to earn more foreign currency since the economic reform began in 1979. The liberalizations can be summarized as follows:

(a) Adoption of a policy for retaining currency earnings:

This policy allows local governments and manufacturers as well as foreign trade corporations keep certain percentage of foreign currency from export earnings. For general commodities, 20 per cent of the foreign exchange income calculated at the official rate goes to the State, 10 per cent to the local governments, 10 per cent to the manufacturers and 60 per cent to foreign trade corporations. The retention quota constitutes a right for those organizations to purchase foreign currency with Renminbi Chinese currency when they need to import goods from foreign countries. The retained foreign currency is kept as a foreign currency quota in the SGAEC or in provinces, municipalities and autonomous regions. The retention ratio may change and is to be decided by the State.

The State, first foreign exchange regulation market was set up in 1986 and more are set up over the past five years and foreign exchange transactions grow each year.

The Chinese Government has in recent years set up about 100 state foreign exchange swap centres in major cities. At these centres, domestic and foreign enterprises, trade companies and other institutions and individuals are allowed to buy and sell foreign currency with Renminbi at an official rate. This liberalization has helped a lot the foreign ventures in China which have difficulties in balancing their foreign currency investments. It also helps the Chinese organizations which have Chinese Yuan, but are short of foreign currency.

Now foreign exchange in China is both possessed by central and local governments, departments and enterprises. Centrally-held foreign exchange is used in light of plan, and accounts for 20 per cent of the total volume of foreign exchange in China. All the foreign exchange retained by the local governments, departments and enterprises can be used at the discretion of the holders. They may use the retained foreign exchange for imports or sell them in the foreign exchange swap markets. Those enterprises that have no foreign exchange may purchase foreign exchange at the swap markets.

The joint venture companies or 100 per cent foreign-owned enterprises are permitted to retain all of their foreign exchange earnings in a foreign exchange earnings in a foreign exchange account with the Bank of China or an authorized bank as an incentive for foreign direct investment.

As part of its effort to bring China's economic activities in line with GATT requirements, China has reduced the value of Chinese Yuan to narrow down the gap between official exchange rate and market exchange rate, and will realize the single exchange rate. The long-term objective of the foreign exchange policy is to establish a comprehensive monitoring system fully reflecting the variation in economic performance and relative value of currencies, and to apply a managed floating exchange rate.

(b) Permission to open account with banks in China by private foreign currency holders:

With growing economic activities guided by the open-door policy, more and more people have foreign currency income and need to be collected by the State for national economic development. Now private holders of foreign currency are free to open foreign exchange account with banks in China and to use their own money.

(c) Permission for Chinese and foreign residents in the country to sell their foreign money to designated banks at the exchange rates offered at foreign exchange centres:

In the meantime, Chinese residents who wish to travel, live or study abroad are allowed to buy US or Hong Kong dollars at the more flexible rates from the State foreign exchange centres, but are required to produce their passports and visas. Immigrants have to show official documents affirming their status.

(d) Permission for foreign companies and foreign-funded firms to do limited US dollar transactions among themselves or use Renminbi to buy US dollar to balance their foreign currency investments from the exchange centre.

4. China's foreign exchange reserve and its control

China has experienced undulations in foreign exchange reserve for several years. In September 1984, foreign exchange reserve reached $US 16.674 billion including $US 12.184 billion in cash. This was a high record since the founding of the People's Republic in 1949. But, the mismanagement of the reserve, coupled with an overheated economy during 1984-1986 led to a sharp decline, reducing the reserve to $US 2.072 billion in 1986. Then the country adjusted its policy and strengthened management, which thereby enabled the reserve level to remain at over $US 10 billion annually. China's foreign exchange reserve registered at $US 29.5 billion by the end of 1991.

China's foreign exchange reserve is mainly used to balance foreign trade and pay for foreign debts. Present foreign exchange control is based on the following cardinal principles:

(1) Foreign exchange reserve in various currencies in order to reduce losses caused by exchange rate flotations;

(2) Proportionating one certain currency in the reserve total according to whether it is needed and how much it is needed in import payment;

(3) Full consideration of the yielding rate, liquidity and security of a currency before it is chosen for exchange reserve;

(4) Adjusting the proportion of the currencies in foreign exchange reserve at any time in accordance with the change of exchange rates.

China's foreign exchange assets are now unilaterally controlled by the Bank of China, but the exchange funds are deposited with large foreign banks. The reserves are directly affected by the import and export payment. Under such circumstances, the reserves can only exist in the form of end-of-term differentials instead of "funds".

5. Foreign monetary institutions in China

Ten years ago, "foreign bank" sounded strange to the Chinese. But the reform and opening to the outside world starting in 1979 conveyed a persuasive message to foreign bankers as well as foreign businessmen, which was responded with vehement foreign banking operations in China.

In the past ten years, the Chinese Government has promulgated three sets of regulations to govern foreign banking businesses in China. The first was the 1985's Regulations for Foreign Banks and Sino-foreign Banks in Special Economic Zones, which initially permitted foreign banks to commerce their operations in special economic zones. The second was the 1987's Provisional Regulations for Operations of Foreign Banks and Sino-foreign Banks in Special Economic Zones, which set series of preferential measures to encourage foreign banking business in the special economic zones. The third was the Regulations for Foreign and Sino-foreign Financial Institutions in Shanghai in 1990, which allow foreign bankers to open offices in Shanghai to take part in the development of the Pudong Area.

The implementation of these laws and regulations has drawn lots of foreign banks to set up offices or branches in China. Japan Import and Export Bank, which opened a representative office in Beijing in December 1979, is the first bank to have a foothold in China. By the end of 1990, there had been 127 foreign financial institutions from 26 countries and regions that established 217 representative offices in 14 cities of China. These banks included Daichi Bank, Citibank NA, Banque Nationale De Paris, Standard Chartered Bank, Deutsche Bank, Union Bank of Switzerland, the Hong Kong and Shanghai Banking Corporation, Normura Securities Co. Ltd., US International Insurance Group etc.

A total of 217 resident representative offices of foreign financial institutions had been set up with the Chinese Government's approval in 14 cities across the country by the end of 1990. They belong to 96 banks and other financial institutions from 26 countries and regions. In addition, 32 joint venture financial establishments, 27 foreign-funded financial establishments and 27 foreign-funded financial establishments' branches came into operation in China by the end of 1991 with the approval of the People's Bank of China.

These foreign banks and financial institutions together with their representative offices in China have provided a large amount of funds for China in its construction and modernization. Besides, through their liaison and consultancy activities, they brought many Chinese and foreign businessmen together for investment or cooperation, studied and financed China's construction projects, provided information on the world business community for related China's institutions and trained personnel for their Chinese counterparts in international finance.

In the whole 1980s, the foreign banks in China had extended their financing to cover many industrial sectors such as energy, infrastructural construction, communications, chemicals, machinery, foodstuffs, automobiles and tourism, involving a series of key projects such as Bao Shan Iron and Steel Works, Tianjin Seamless Pipe Plant, Daya Bay Nuclear Power Plant, Pinshu Coal Mine and Beidagang Power Plant.

The operations of foreign banks in China have helped improve China's investment environment and enhanced foreign investors' confidence in China.

Foreign banks and monetary institutions are concentrated in coastal cities.

By the end of 1991, 40 foreign banks and monetary institutions had been established in Shenzhen, Zhuhai, Shantou, Ximen, and Hainan - China's special economic zones (SEZs). Of them, there are 25 branches of foreign banks, 12 representative offices, one Chinese-foreign jointly owned bank, one jointly owned financial affairs company and one jointly owned insurance company with capital from Hong Kong, Japan, France, the United States, Singapore and the Middle East.

The foreign banks and monetary institutions play an important role in reforming the financial system as well as introducing foreign investment in SEZs. Not only they have put large amounts of money into the key projects in the SEZs and supported the SEZ's foreign trade, but also they have promoted the international operations of Chinese-owned banks there, helping the Chinese banks with their modernization and internationalization.

VII. CUSTOMS ADMINISTRATION

A. CUSTOMS ORGANIZATION

1. General Customs Administration (GCA)

The General Customs Administration of the People's Republic of China (GCA) is a State administration organ in charge of overall management of the customs work throughout China. As a leading body, the GCA has set up a branch in every province, municipality and autonomous region and import ports of China. GCA is located in Beijing.

Address: No. 6, Jian Guo Men Nei Street
Beijing, China

Post Code: 100730

Telephone: 86-1-5195008

Facsimile: 86-1-5194004

2. Responsibilities and functions of GCA

GCA is responsible for supervising implementation of the State policies, decrees and regulations pertaining to the control of foreign trade and of the import and export of goods, protecting the country's economy and interests. GCA is the leading body in charge of overall management of the customs work throughout China.

The main functions of GCA are as follows:

(a) Organize and administer all Customs offices and their services;

(b) Study and draw up Customs regulations and rules, and issue decisions, instructions and orders to local offices;

(c) Work out plans to implement the Central Government's decrees and fulfil customs tasks;

(d) Supervise customs offices to implement the Government's policies, laws, decrees, directives and regulations, deal uniformity with any problems which need solving;

(e) Compile customs statistics on foreign trade and guide statistical work of all customs offices;

(f) Appoint directors of district customs offices or remove them from offices;

(g) Collect and study information about foreign Customs in order to improve the customs policies, participate in negotiating and drawing up international agreements and treaties governing Customs service, participate in drawing up customs tariffs and determining duty rates, examine any appeals about duty collection or exemption and smuggling or infringement cases.

3. Customs supervision and control

One of the main administrative tasks of the Chinese Customs is to supervise and control incoming and outgoing cargo and means of conveyance.

(a) All cargo and means of conveyance, on entering or leaving Chinese territory, must pass through places where there are Customs offices and shall be declared to the Customs, and placed under its inspection. Only after release by the customs, can the cargo be delivered or loaded and can the means of conveyance continue on its way to other Chinese open ports or sail abroad;

(b) The Customs is to examine and release all cargo entering or leaving Chinese territory upon verification of the import and export licenses issued by the foreign trade control institutions. Cargo subject to commodity inspection, animal-plant quarantine and medical test, as well as any other kind of inspection under state restriction, shall be examined and released upon presentation of the certificates issued by the authorities concerned;

(c) Imports and exports, except those specially exempted, shall be subject to the required Customs examination. The cargo owner or his agent shal be present during the examination and shall be held responsible for the unpacking of the goods upon the Customs demand. Customs officials are to see that the shipping marks, number of packages, weight, specifications of the cargo and trading country correspond with those on the license; and see whether the cargo accords with relevant foreign trade regulations; whether there is any damage or loss of cargo; and whether the quality and packing meet requirements;

(d) As a rule, cargo under Customs supervision and control is examined at wharves or in warehouses or open yards. However, in certain cases (approved by the Customs), cargo may be examined at other places upon the request of the trading corporations concerned. To facilitate traffic of goods, the customs may release upon examination such items as certain bulk cargo, dangerous goods and perishable goods so as to expedite transport;

(e) All transit cargo from aborad passing overland in China en route to a foreign country or transit cargo on board an international-going vessel or civil airplane from abroad and destined for other foreign countries via a Chinese port or airport is likewise placed under Customs supervision and control;

(f) With regard to imports and exports for exhibition and other temporary import and export cargo, Customs formalities should be performed in accordance with the relevant regulations. As to samples of commodities, gifts etc. given gratis to China's government departments or enterprises by foreign firms, the Customs may release them (licence-free and duty-free) to the recipient upon receipt of the latter's certificates;

(g) All inward and outward international-going vessels, trains, civil aeroplanes and motor cars are under Customs supervision and control. On entering or leaving Chinese territory, declarations must be submitted to the Customs and vehicles are subject to Customs inspection. After permission has been obtained, the loading and discharging of cargo and baggage shall be carried out under Customs supervision.

B. TARIFF

1. Tariff system

In accordance with provisional regulations governing the application of the customs import and export tariff of the People's Republic of China together with explanatory notes to the customs tariff, duties are to be levied on all imports and exports to be carried into or out of Chinese territory.

China employs two types of tariff rates on imports. One is general tariff rate and the other is minimum tariff rate. Minimum tariff rates are applied to imports from countries that have signed reciprocal commercial treaties or trade agreements with China. There ae now 85 countries that have concluded such treaties or agreements with China. General tariff rates are levied on imports from countries that have not concluded such treaties or trade agreements with China.

The minimum tariff rates range from 2 to 150 per cent, while the general tariff rates range from 8 to 180 per cent. General tariff rates are 5 to 30 per cent higher than the minimum tariff rates on the same goods. Lower tariff rates apply to advanced machinery, equipment and parts; raw materials essential for industrial production; cereals, seeds and chemical fertilizers ect. Duty exemptions cover live animals for improvement or breeds; bulbs and tubers for improvement of plant species; wheat, maize, rice; metallic ores and concentrates; educational goods etc. Higher tariff rates are levied on luxury items and non-essential products such as liquors, tobaccos, passenger cars and motorcycles.

2. Tariff policy

Tariffs are adjusted from time to time. The tariffs are based on the following principles:

(a) Industrial products and semi-products which China can manufacture at present or will be able to manufacture sufficient quantity in the near future (though temporarily in short supply) are subject to higher rates;

(b) All luxuries and non-essential products are subject to higher duty rates;

(c) Lower or duty free rates are granted to advanced equipment and instruments and parts. Raw materials essential for industrial production and cereals, seeds and chemical fertilizers needed by the country also enjoy low tariff rates;

(d) Duty exemptions or duty reductions are enjoyed by all scientific books, farm insecticides, and certain medicines which cannot be manufactured in China or replaced by domestic medicines;

(e) Very low duty rates or duty-exemption cover all exports and processed raw materials and imports which help to develop the country's exports products.

3. Tariff commission

Tariff rates may be adjusted by the Tariff Commission. The Commission is composed of representatives from the General Customs Administration, the Ministry of Foreign Trade and Economic Cooperation, the Ministry of Finance, the National Planning Commission and other relevant organizations.

C. IMPORT AND EXPORT DUTY

1. Principles determining import duty rates

China employs a protective duty policy. The commodities with reduced import duty rates fall into the following categories:

(a) Low duty rates for imports of natural raw materials and primary products such as rubber, timber, leather, pulp paper etc.;

(b) Low duty rates for imports of advanced equipment and machines and high-technological machines, components, spare parts;

(c) Low duty rates for imports of products, machines, equipment that are temporarily in short supply;

(d) Low duty rates for imports of products China are at present unable to produce at all or of high standard.

2. Import duty valuation

Import duties are calculated on the basis of the CIF value and this value consists of the price of the goods, packing charges, freight, insurance premiums and other service charges incurred before unloading at the port of entry in China. The price of the goods is based on the normal wholesale price of such goods prevailing at the place of purchase in an exporting country. When the normal wholesale price cannot be determined by the customs, the dutiable value is calculated on the basis of the domestic wholesale price of identical or similar goods imported into China, less import duties, taxes and charges related to importation and other expenses for transporation, storage, operating expenses and profits incurred after importation. Such aggregated expenses and profits may be calculated at 20 per cent of the dutiable value.

As of 1 May 1991, the Customs Administration of China promulgated new regulations on the implementation of Customs valuation for import goods.

Three important principles are highlighted in the new regulations:

(a) The declared prices for import goods cannot be accepted as the duty-paying value unless they are otherwise verified and approved by the Customs;

(b) The duty-paying value of the import goods shall be assessed according to the transaction value of the goods. When the transaction value of the import goods is not available, the duty-paying value of the goods should be assessed according to international practices. Five customs valuation methods have been set in the regulations and will be applied in consection so as to ensure justice and reasonableness of the prices assessed;

(c) The consignee of import, or his agent is obligated to submit the declaration for imports indicating complete and real prices, produce to the Customs relevant documents to the legal effect that they are true and correct. Those who fail to provide true duty-paying prices shall be penalized according to law.

The new regulations are an improvement and amendment to the "Methods of the People's Republic of China to Verify Duty-Paying Prices of Import Goods" promulgated on 1 October 1989. It will provide an essential basis for China's Customs to assess the duty-paying value of import goods.

3. Import duty rates

An import regulator tax with rates between 20 and 80 per cent is levied on the following items in order to restrict their import:

- Processed polyester yarns and certain kinds of synthetic fabrics and man-made fabrics,
- Electronic calculators,
- Computers and peripherals of a worked length less than 32 bits;
- Colour projection television sets,
- Passenger cars, four-wheel-drive vehicles, light vehicles, trucks less than 8 tonnes, motorcycles,
- Sunglasses,
- Copying machines, video tape recorders and some other items.

A consolidated industrial and commercial tax which serves as a kind of turnover tax is levied on imports. The tax covers 108 categories of goods and services. Tax rates rang from a low rate of 1.5 per cent for grey cotton cloth to the highest rate of 60 per cent for cigarettes.

Raw materials, components, spare parts, auxiliary materials and packing materials imported for producing export products are exempted from the consolidated industrial and commercial tax.

Imports into Tibet through border trade with neighbouring countries are subject to a separate system of customs duties established by the People's Government of the Tibet Autonomous Region. The tariff applies to goods imported directly for use in Tibet only.

Raw materials, parts, accessories, components and packing materials supplied by foreign enterprise for processing or assembling are exempted from import duties, provided that the products are exported within a specified period. Raw materials, components, spare parts, auxiliary materials and packing materials imported for use in the production of re-export goods by joint ventures, wholly foreign-owned enterprises or enterprises established in the special economic zones or designated coastal cities are exempted from import duties. Machinery and equipment, parts and other means of production imported as part of investment by the enterprises described above are also exempted from import duties.

On the request of GATT, China has committed itself to opening future market in line with the relevant obligations of GATT. Therefore, China, from March 1986 to the first half of 1991, cut import duties on 83 tariff lines, and from 1 January 1992 again cut, followed by a unilateral tariff reduction, on 225 lines products. Since 1 April 1992, China has gradually abolished all import regulatory duties.

Since 1986, in the light of the changes of industrial structure, China has reduced 81 tariff items of import tariffs unilaterally and informed Negotiating Group on Tariffs as a contribution to Uruguay Round and as a part of tariff concession for resumption of China's status in GATT. Attached behind is the amended tariff schedule in terms of downward adjustment since 1986 up to 1991.

With regard to internal taxation, China applies same internal tax both on imported and domestic goods. Due to the differences in the legislation, currently, China applies two different sets of indirect taxes for domestic enterprises and foreign investment enterprises respectively i.e. to levy product tax or value-added tax on domestic enterprise, whereas, industrial and commercial consolidated tax on foreign joint venture. The rates of these two sets of taxes are not entirely identical. However, the rates of imported and domestic goods are all the same, under the same regulation on indirect taxes. Foreign investment enterprises shall submit consolidated industrial and commercial taxes, regardless whether they manufacture domestically or import goods. The domestic enterprises shall hand in similar product tax or value-added tax irrespective of imported or manufactured at home.

Import duty on incoming passengers' baggage and personal articles sent by post is levied in accordance with the Rule Governing the Levying of Import Duty on the Articles in Passengers' Baggage and Personal Postal Parcels of the People's Republic of China.

Tonnage dues levied on international-going vessels are classified into two kinds: one for a three-month period, and the other for a 30-day period, at the duty-payers' option. Upon application for payment, tonnage dues on vessels of those countries which have concluded treaties or agreements with China providing for most-favoured-nation reciprocity for tonnage dues are levied at preferential rates.

4. Bonded warehouses

China began in early 1980s to practice a bonded system featuring bonded warehouses and bonded factories in an effort to meet the rapid growth of foreign trade.

In 1981, the head office of China Customs issued the provisions of the China customs for bonded goods and bonded warehouses, which have encouraged emergence of more bonded warehouses being established since then.

In 1988, China acceded to Kyoto Treaty and its Appended Treaty on Bonded Warehouses. The same year also witnessed the amendment and issuance of the Regulations of the People's Republic of China on Bonded Warehouses and materials imported for export-oriented processing, as well as goods with tariff deterred at the approval of the customs authorities may be stored in bonded warehouses. At present, there are about one thousand bonded warehouses in China, with 6 million tons of goods worth RMB 6 billion yuan in store in the year 1990. The bonded warehouses are set in Shenzhen, Guangdong, Zhuhai, Hainan, Shanghai, Tianjing, Beijing, Dalian, Shangdong, Beihai etc.

Types of bonded warehouses: China's bonded warehouses may be divided into two types: (1) specialized bonded warehouses operated by specific foreign trade corporations for storing goods of their own; (2) public bonded warehouses owned by warehouse companies which provide warehouses for both domestic and foreign businessmen.

The General Customs Administration of the People's Republic of China promulgated the bonded regulations of the General Customs Administration of the People's Republic of China on materials imported by foreign-invested enterprises. The regulations became effective on 1 April 1991. Under the regulations any economic entity with a legal person status may apply to the Chinese Customs for setting up bonded warehouses. But the applying companies should register with the Chinese Customs with documents approved by the department of the Chinese authorities in charge and with the business licence checked and issued by the administration of industry and commerce, and should send to the Customs for the records in the Annual Import Plan approved by the department in charge and the import permit for the companies and the list of the major commodities.

Raw materials, bulk parts, components, elements, accessories, auxiliary materials and fuel which are in short supply in China and which are imported by foreign-invested enterprises belong to the bonded goods and the Chinese Customs will exercise supervision over them. Domestic materials for foreign-invested enterprises are not allowed to deposit in the bonded warehouses. The foreign-invested enterprises can enjoy the tax reduction and exemption treatment for materials purchased by them from bonded warehouses.

Foreign-funded enterprises are required to submit the import licence to the customs houses for examination when purchasing materials subject to licence control from the state designated firms responsible for material purchase. However, the foreign-funded enterprises need not submit import licences when they buy bonded goods from the state-designated material purchasing firms.

A legal person status may apply to the Customs for setting up bonded warehouses. But a bonded warehouse should have (1) reliable facilities for storing imported goods, (2) operation and complete accounts system; and (3) certificated duty staff approved by the Customs.

The time limit for storing goods in bonded warehouses is one year and under certain circumstances is applicable to be extended with the Customs' permission. Goods stored in bonded warehouses exceeding the time limit may be sold or disposed of otherwise by the Customs. If any package change is needed, it has to be done under the supervision of the Customs.

Bonded warehouses play an important role in promoting China's import and export and strengthening Sino-foreign technological exchanges because (1) the bonded warehouse system is advantageous to the development of entrepot trade and meets the needs in international trade; (2) it simplifies customs formalities and thus benefits both enterprises concerned and the Customs; and (3) the establishment of commission bonded warehouses helps Sino-foreign technical cooperation and guarantees a healthy operation of import equipment in the course of production.

5. Third tariff cuts in 1992

The tariff cuts scheduled to take effect on 31 December 1992 signal China's latest attempt to come into line with lower tariffs mandated by the General Agreement on Tariffs and Trade (GATT).

The cuts, which will affect tariffs on 3,371 tax items (see accompanying table 4: list for some of the items) will be the third reduction in a year.

The cuts will involve 53.6 per cent of the country's total tax items and shear tariffs overall by 7.3 per cent.

The impending cut will bring China's general tariff level closer to the 15 per cent level for developing nations.

China's efforts to re-enter GATT have now crystallized into making substantial tariff concessions.

The move will help establish tariffs as one of the most important instruments to regulate China's foreign trade in place of central planning.

The huge tariff cuts are also conducive to the institution of a complete market economy in China.

The package will cull out the "unreasonably high" tariffs on certain items while protecting the country's infant industries.

Cuts will be made in the following major categories:

- Raw materials that are short in supply and essential to industrial development such as crude oil, timber, pig iron and gems etc.;
- Advanced technology and equipment that China cannot produce such as large aircraft and certain computer software;
- Certain products made in developing countries such as a wide range of medicines;
- Commodities that are competitive in the world market, such as garments and shoes.

Table 1. Import and export of articles prohibited by the customs

Import of the following articles is prohibited:

Item	
1.	Various types of weapons, ammunition and explosives;
2.	Radio transmitters, receivers and their main parts;
3.	Renminbi (except for those dealing in accordance with currency contracts or agreements);
4.	Manuscripts, printed matter, films, photographs, discs, movies, sound recording tapes, video recording tapes etc. which are pernicious to China's politics, economy, culture and morality;
5.	Deadly poison, anaesthetic drugs to which people can become addictive, opium, morphine, heroin etc.;
6.	Animals, plants and their by-products with hazardous gems or pests;
7.	Food which is obstructive to hygiene and infections coming from epidemic areas;
8.	Other articles prohibited from import as stipulated by the State.

Export of the following articles is prohibited:

Item	
1.	Various arms, ammunition and explosives;
2.	Radio transmitter-receivers and their principle parts;
3.	Renminbi and negotiable securities;
4.	Foreign currencies, notes and negotiable securities that have not been checked;
5.	Manuscripts, printed matter, roll films, photographs, gramophone records, films, loaded recording tapes and video-tapes concerning state secrets and that are not permitted to be exported by the State;
6.	Precious cultural relics and books about Chinese revolution, history, culture and art;
7.	Valuable animals, plants and their seeds;
8.	Valuable metals and their products, pearls and jewels (with the exception of those within the quantity allowed to be taken out by outgoing passengers);
9.	Other articles the export of which is prohibited by the State regulations.

Table 4. List of commodities scheduled for tariff cuts in 1993

1. Minerals – tariffs are cut by an average of 6.9 per cent
    a) Crude oil – tariffs down from 3 to 2 per cent
    b) Naphtha – down from 15 to 10 per cent
    c) Fibre asbestos – down from 20 to 15 per cent
    d) Gems – down from 9 to 7 per cent
2. Machinery and electronic products: Tariffs are cut by an average of 6.2 per cent
    a) Household sewing machine – down from 60 to 50 per cent
    b) Computer software – down to 9 per cent
    c) Electric hand tools – down from 80 to 74 per cent
    d) Condensers – down from 25 to 23 per cent
    e) Instant cameras – down from 50 to 5 per cent
    f) Ordinary cameras – down from 80 to 50 per cent
    g) Camera parts (such as lenses) – down from 80 to 25 per cent
3. Transportation equipment: Tariffs are cut by an average of 5.2 per cent
    a) Large aircraft – down from 6 to 5 per cent
    b) Automobile shock absorbers and radiators – down from 80 to 50 per cent
4. Chemicals: Tariffs are cut by an average of 4.2 per cent
    a) Ethylene, propylene, betylene – down from 15 to 12 per cent
    b) Polyethylene, polypropylene – down from 30 to 23 per cent
    c) Dyes – down from 25 to 23 per cent
5. Building materials: Tariffs are cut by an average of 9.2 per cent
    a) Ordinary slate and brick – down from 70 to 60 per cent
    b) Cement products – down from 50 to 40 per cent
    c) Quartz glass for optical fibre – down from 12 to 9 per cent
6. Metal and metal products: Tariffs are cut by an average of 7.3 per cent
    a) Pig iron – down from 3 to 2 per cent
    b) Silicon steel – down from 15 to 12 per cent
    c) Copper – down from 6 to 5.5 per cent
7. Farm produce: Tariffs are cut by an average of 8 per cent
    a) Cattle and sheep fat – down from 50 and 20 to 10 per cent
    b) Cowhide – down from 12 to 10 per cent
    c) Chocolate and non-coca sugar – down from 40 to 16 per cent
8. Textile raw material and product: Tariffs are cut by an average of 9.6 per cent
    a) Man-made cotton and acrylic fibre – down from 25 to 20 per cent
    b) Polyamide fibre – down from 60 to 45 per cent
    c) Chemical fibre product – down from 100 to 90 per cent
    d) Garment – down from 100 to 95 per cent
9. Timber and paper: Tariffs are cut by an average of 9.4 per cent.
    a) Ordinary logs – down from 3 to 2.5 per cent
    b) High-grade timber – down from 25 to 20 per cent
    c) Sheet wood for making plywood – down from 12 to 9 per cent

VIII. COMMODITY INSPECTION

A. COMMODITY INSPECTION ORGANIZATIONS

At present there are three state-designated institutions with power to conduct the inspection of imports and exports. Each of them is independent and has its own specialized responsibilities in commodity inspection. The three institutions are: (1) State Administration of Import and Export Commodity Inspection; (2) Specialized Inspection Agencies; and (3) China National Import and Export Commodities Inspection Corporation.

1. State administration of import and export commodities inspection

The State Administration of Import and Export Commodity Inspection (SACI) was established in 1949 and is responsible for the inspection of import and export commodities for the whole country at national level.

SACI has over 190 laboratories at the national level and 250 laboratories at the regional level. These commodity inspection laboratories are equipped with experienced experts, technicians and senior engineers or senior economists. Among the total laboratories, 109 are well equipped with sophisticated inspection/testing equipments, instruments and metres, and 53 are accredited internationally. The ports of Qinhuangdao, Beihai, Lianyungang and Nantong have installed large-auto assembling-equipments for coal, cereals and mineral ores.

China enforces regulatory system that all the import and export commodity inspection shall be subject to SACI's centralized and unique administration to ensure the unified policies, laws, rules and regulations.

SACI has the following main responsibilities:

(1) To exercise the law and control over the nationwide import and export commodity inspection work; work out commodity inspection principles, policies, rules, regulations and plans; and be responsible for working out inspection methods and standards of import and export commodities;

(2) To make, adjust, and arrange the list of import and export commodities subject to inspection enforced by the State;

(3) To examine and approve the application for the exemption of import and export commodities from inspection;

(4) To conclude mutual recognition agreements on conformity assessment of import and export commodities with relevant foreign bodies, and accredit domestic and foreign inspection organizations to undertake import and export commodity inspection assignments;

(5) To accept foreign agency's entrustment for carrying out quality certification of import and export commodities;

(6) To designate the inspection organizations that are eligible for conducting inspection of import and export commodities according to law;

(7) To arrange, supervise and control over the import and export commodity inspection undertaken by the receivers, users, departments of production, management, storage and transportation as well as by the designated/accredited inspection organizations; to be in charge of sanitation registration, inspection and certification of import and export commodities and the related production departments, and the issuance of quality licence as well;

(8) To draw up rules and regulations on, establish systems for and make arrangements of superintending and surveying services in relation to foreign trade;

(9) To accept the application for reinspection and issue the conclusions on such reinspection;

(10) To undertake the issuance of certificates of GSP Form A and certificates of origin;

(11) To collect and provide information concerning import and export commodity inspection; and

(12) To represent the State for attending international conferences and taking part in technological exchange activities, etc.

The China Import and Export Commodity Inspection Bureaux (CCIB) are under the administration of SACI and located in provinces, municipalities and autonomous regions of the country. There are over 200 CCIB and/or branch offices, conducting the inspection of import and export commodities under the local jurisdiction in accordance with the relevant laws and regulations of the State.

CCIB may use quality certification marks on the qualified import and export commodities in accordance with the agreements signed between SACI and the relevant foreign bodies. At present, overseas Safety and Quality Marks applied in China include UL Marks (Underwriters Laboratories Ltd.), IWS Marks (the International Wool Secretariat) and CSA Safety Marks (Canadian Standardization Association).

2. Specialized inspection agencies

The following four State-designated agencies are empowered to conduct commodity inspection of certain categories. The certificates issued by them are legal and effective equal to those by CCIB and their offices:

(a) Animal and Plant Quarantine Centre – responsible for the quarantine of imported and exported animals and plant products;

(b) Ship Inspection Bureau of the People's Republic of China – responsible for the inspection of imported ships' and ships' main equipment;

(c) Ministry of Health of the People's Republic of China – responsible for the inspection of imported foodstuffs and drugs;

(d) National Bureau of Weights and Measurements of the People's Republic of China – responsible for the inspection of imported weighing and measuring apparatus.

3. China National Import and Export Commodities Inspection Corporation (CNIECIC)

In July 1980, CNIECIC was set up with its head office in Beijing and branches in 29 provinces, municipalities and autonomous regions. CNIECIC is a government-approved and independent notary inspection enterprise at government level acting as a third party to inspect, test and survey import and export commodities as entrusted by overseas firms in trade, transport, insurance, manufacturing and inspection.

Its business scope is as follows:

(a) To ascertain the quality and sanitation conditions of import and export commodities (by organoleptic inspection, physics, chemistry and bioassay);

(c) To inspect the packing and marks of import and export commodities; to draw and seal representative samples; to check and issue certificates of origin of value;

(d) To inspect storage of cargoes on board vessels (including ship's hold survey and supervision of unloading); to ascertain measurement tonnage and the weight tonnage of import and export cargoes to be shipped;

(e) To survey damaged cargoes inbound vessels (including hatch survey and supervision of unloading); to survey cargoes in respect of general average declared; to survey inbound damaged cargo;

(f) To examine the cleanliness and/or tightness of outbound ship's tanks, holds, cold chambers or containers together with temperature inspection in the cold chambers;

(g) To provide consulting services on commodities inspection in connection with foreign trade; and

(h) To provide other inspection and superintendence services, namely, the acceleration of delivery of export commodities, the supervision of small complete sets of equipment from examination and approval of design to supervision in the manufacturing process and the inspection of export commodities from raw materials to end products etc.

All the branches of CNIECIC have laboratories with various conventional as well as advanced testing instruments and staffed with exports and specialized technicians. In addition, the Corporation maintains close coordination with various research units and other professional testing and inspection organs throughout China. CNIECIC accepts requests for commodity inspection and survey and appraisal made by domestic organizations and enterprises and acts as notary in disputes arising from quality discrepancy under contracts.

The inspection and appraisal certificates CNIECIC issues are legally effective documents by which officials in charge of foreign trade handle the handing over of goods and settlement of accounts, work out customs tariffs, calculate costs and settle disputes over damage claims.

4. Inspection service charges

Inspection service charges are mainly based on the service rendered and the technologies involved. The total value and quantity of the commodities involved are also taken into consideration. If the charge is calculated according to the total value of commodities, the rate, in general, is below 0.5 per cent of the total value. But, if the inspection involves complicated technology and work, the charge will be negotiated between the two parties concerned. If a foreign trustee requests various kinds of inspection for the same batch of commodities, a reduction of the charge may be made on a case-by-case basis. Appropriate preferential treatment will be considered if the quantity of commodities for inspection is large or the trustee's assignment is on a long-term basis.

B. COMMODITY INSPECTION LAWS AND REGULATIONS

1. Enforced inspection organization and commodities

China published the "Provisional Regulations on Commodity Inspection in 1951, the "Provisional Regulations Governing the Inspection and Testing of Import and Export Commodities" in 1954, "Regulations on the Inspection of Import and Export Commodities of the People's Republic of China" in 1984 and enacted the "Law of the People's Republic of China on Import and Export Commodity Inspection" in 1989 (hereinafter referred to as the Commodity Inspection Law).

According to China's commodity inspection law, SACI and CCIB are the state authorized organizations to carry out the inspection of imports and exports subject to inspection. In 1990 the SACI announced items in 17 categories under the import inspection list and 589 items in 17 categories under the export inspection list.

Under this Catalogue, items concerning safety standards of the samples submitted, and factory production and inspection conditions are to be inspected and investigated by CCIB, and are allowed for export to China if they are granted with Quality Licence certificates and Safety Marks.

For export commodities, Quality License System has been carried out since 1983 for important exports, including machinery, electrical products, garments, textiles, ceramics, coal and toys, etc. These products and production conditions of the manufacturers/processors are allowed to export if they are granted quality licenses by CCIB.

For export of food commodities, a Sanitation/Hygiene Registration System has also been enforced for factories/storehouses of food for export. Those without registration or approved code numbers are not permitted to produce or to be stored for export. From 1985-1990, 3,876 factories/storehouses involving 24 categories of food for export were examined and approved by SACI. Now 138 processing factories producing meat, canned food and casing have made sanitation registration in 14 countries, including the United Kingdom, the United States and France.

To further control the quality of imports, China, in 1990, began to adopt quality licences to nine kinds of imported commodities: automobiles, motorcycles, motorcycle engines, refrigerators, air-conditioners, compressors, television sets and cathode tubes. By the end of 1990, Japan, Singapore, Britain, Germany, the Russian Federation, the United States and Brazil applied for quality licence. Of all these applications, 2.6 per cent is for automobiles, 1 per cent for motorcycles, 5.5 per cent for refrigerators, 8 per cent for air conditioners, 28 per cent for compressors and air conditioners, 12.5 per cent for television sets, 45.4 per cent for cathode tubes. Commodity inspection departments have also issued about 200 quality licences and 7 million safety approval plates for over 600 kinds of import commodities.

In case of needs, Chinese specialists are sent to abroad to investigate local factories.

Inspection on import and export commodities shall cover quality specification, quantity, weight, packing and requirements for safety and sanitation/hygiene.

2. Major categories of commodities subject to inspection testing

The following eight categories of import and export are enforced to go through compulsory inspection before import and export:

(a) Food and animals for export;

(b) Containers for packing dangerous articles;

(c) Ships and containers for transporting perishable food;

(e) Other import and export commodities required by other laws and administrative decrees for testing and inspection;

(f) Commodities for which certificates of inspection of Chinese commodity-inspection organizations are required in entering importing countries according to agreements between China and importing countries;

(g) Commodities required by foreign-trade contracts or letters of credit to have certificates issued by commodity-inspection organizations; and

(h) Other commodities for which application for inspection is required by trade partners concerned.

However commodity-inspection organizations will refuse applications for testing commodities which should be inspected but are shipped out of the country without being inspected.

3. Documents required for inspection of import and export

(a) To produce foreign trade contracts, foreign invoices, bill of lading, packing lists and notices of goods' arrival;

(b) To produce quality certificates, directions and standards and technical data, if quality inspection is applied, and samples should be produced if the transaction is done based on samples;

(c) To provide list of damaged goods, commercial records of railway, air accident records or marine reports and other documents that certify the damages, if inspection for damages is required;

(d) To provide itemized lists of weight and lists of tally, if inspection for weight or quantity is required. If the imported goods are inspected by consignees or user of other units, the records, itemized lists of weights and inspection reports should be attached;

(e) To provide foreign trade contract, letter of credit and other related documents for export commodities inspection.

If applying for pre-inspection, the applicant should provide the necessary documents for inspection in the following cases:

For commodities pre-inspected by its own area and need other certificates for export in the area, the applicant should have the pre-inspection report signed by the inspection bureau of the area;

For commodities inspected by other commodity-inspection organizations, it is necessary to attach the master copy of "voucher for exchanged certificates for export-commodity inspection" signed by the commodity inspection organization of the port of shipping;

For commodities which certificates of quality and hygiene registration are required, it is necessary to attach the certificates of registration, factory inspection and export quality.

In applying for certificates of hygiene for frozen food, aquatic products, animal by-products and canned food, it is necessary to attach the health-registration certificates signed by commodity-inspection organizations and factory-inspection certificates.

In applying for testing containers for packing dangerous goods, the applicant should provide data about the standards and technological processes of the products and certificates on the property of the packages.

In applying for commissioned inspection, the applicant should provide samples for testing, specify requirements for inspection on behalf of foreign partners, and other necessary documents. Application for inspecting weight of bulky goods imported should be filed with the port of entry.

If a consignment arrives in batches, the consignees or agents should ask the commodity inspection organization at the port of entry for certificates and if the whole consignment cannot be inspected at the port of entry, application for change of inspection place should be filed.

After the import commodities for which inspection is required arrive, the consignees or agents should register the commodities at the port of entry or the station of arrival upon the notice of import goods arrival and other certificates.

For commodities that are in the list of commodities for inspection and imported commodities but not covered in the list and need certificates of inspection organization in claiming for damage, the consignees or their agents should file applications for inspection at the place of destination within one-third of the time of the valid period for claiming damage. If the claim period is near and inspection certificates cannot be produced in time, the applicant should go through the formalities for postponing the time of claim.

The application for inspecting export commodities should be filed at least ten days in advance of customs declaration or shipping. If the commodities require a long time for inspection, enough time should be given.

The goods inspected should be shipped out within two months counting from the date of the issuance of the certificates. For fresh and live export commodities, they should be shipped out within two weeks. If the time limits are exceeded, application for re-inspection should be filed and the original inspection certificates and bills of release should be returned.

C. EXPORT FOOD CONTROL IN CHINA

"The Law of the People's Republic of China on Food Hygiene" stipulates that all food for export is subject to sanitary inspection and supervision by the State Administration of Import and Export Commodity Inspection (SACI) and its Regional Commodity Inspection Bureaux (CCIB), and the customs shall check and release food for export against certificates issued by CCIB.

In 1984, SACI and the Ministry of Public Health promulgated the "Provision of the People's Republic of China on Food for Export" with a view to strengthening inspection and administration on food for export and avoiding contamination of food for export and harmful factors to human body. It is clearly stipulated that all food for export (including various kinds of processed foodstuffs and raw materials for human consumption and food added with medicines according to traditional custom) is subject to inspection. No food is permitted for export without undergoing inspection or if judged substandard.

The food for export, which has been inspected by CCIB and judged up to standard and obtained certificates, must be shipped for export within the time of validity of the certificates. For those food exceeding the time of validity of the certificates, reinspection must be conducted.

The main functions of CCIB in enforcing sanitary supervision and inspection of food for export are:

(1) to enforce sanitary supervision and inspection on processing factories, slaughter houses, cold storage and storehouses of food for export (hereinafter refered to as the factories/storehouses of food for export);

(2) to formulate and promulgate standards and relevant provisions for inspection on quality of food for export and supervise implementation;

(3) to administrate in a unified way the registration of the factories/storehouses of food for export.

In accordance with the provisions, all factories/storehouses engaged in production, processing, slaughter and storage of food for export within the territory of China must first obtain sanitation licences from the local public health/sanitation and approval of local authorities in charge of production, then apply to CCIB for registration. After examination by CCIB those factories/storehouses which are proved up to sanitary requirements for environment, facilities, raw materials, subsidiary materials, processing and personnel engaged in food processing, packing, storage, transportation and sanitary inspection control stipulated in the "Minimum Sanitary Requirement for Factories/Storehouses of Food for Export" or "Detailed Rules for the Registration of Factories/Storehouses of Food for Export", can be granted registration certificates or registration code numbers separately. Factories/storehouses which intend to apply for registration and accreditation abroad must meet the veterinary and sanitary requirements set forth by the relevant health authorities of importing countries. The registration with foreign governments shall be made by SACI. No food factories/storehouses are permitted to produce, process and store food for export without registration certificates and registration code number. Those applying for but failing to obtain registration code numbers or accreditation from foreign country are not permitted to produce or store food for export to the related foreign countries.

From 1985 to 1990, 3,876 factories/storehouses involving 24 categories of food for export were examined and approved by SACI. Of these, 138 processing factories dealing with meat, canned food and casing, etc. have made sanitation registration in 14 countries respectively, including Germany, United Kingdom, the United States and France.

In addition, SACI pays close attention to strengthening follow-up inspection over the registered factories/storehouses of food for export. CCIB shall exercise random inspection on these factories/storehouses at any time within three years of validity of registration certificates. If any registered factories/storehouses are found failing to meet the sanitary requirements, they will be given warning or ordering to correct problems within a limited period of time or revoking the registration certificates respectively depending on the seriousness of the case; and it any factories/storehouses which have been registered and accredited in importing countries are found not in conformity with the sanitary requirements, they shall be ordered to stop exporting food to such importing countries. They can only resume export when they are proved to meet the sanitary provisions and requirements through improvement.

If necessary, CCIB may send quality supervisors to processing enterprises to supervise production and processing in accordance with relevant provisions, standards, and the contractual stipulations and to conduct random inspection on food for export so as to prevent delivery of any substandard food from the factories.

For detailed information on list of import and export commodities subject to inspection and relevant organizations etc., please see Annex 5 in Part II of this Guidebook.

IX. INSURANCE

A. DEVELOPMENT OF CHINA'S INSURANCE BUSINESS

1. Insurance business before 1980

Before the People's Republic of China was founded in 1949, insurance business was basically controlled by foreign companies.

After 1949, the Government of new China set up the People's Insurance Company of China (PICC) and took over the control of insurance business from foreign companies and instituted a compulsory domestic insurance system, under which domestic insurance business grew up steadily with about 3,000 agent offices employing 34,000 staff throughout China in 1952.

During 1953-1979, China's domestic insurance business was basically suspended and only foreign insurance was in operation. This situation was attributed to the understanding that insurance in China was not necessary any more since all losses of enterprise properties were covered by the Government and private properties were of not much value for insurance.

The economic system reform since 1979 has encouraged enterprises to take responsibility for profit and losses, and more and more people have come to realize the importance of insurance.

2. Domestic insurance business

With a view to meeting the requirements of economic construction, PICC resumed in 1980 domestic business which had been suspended for more than 20 years. It has now embarked on the road to overall development. Guided by the business policy of serving production and the masses, PICC provides various types of insurance including insurance on property of enterprises, household effects, and life insurance. Besides, it has commenced the writing of many types of rural insurance such as insurance on crops, production materials, production machines and tools, rural household effects, and farm cattle, milk cow and pig raising to support the development of the rural economy. For the purpose of relieving the workers and staff of collectively-owned enterprises from fear of troubles in their daily life, besides industrial and life insurance, PICC is writing pension and medical insurance on a trial basis.

Domestic insurance has rapidly expanded over the past 12 years. By the end of 1990, the total premium income was 17.74 billion yuan, 15.53 billion yuan of which was from the domestic business.

Currently, there are more than 530,000 enterprises, nearly 83.40 million families, over 4.91 million motor vehicles, and approximately 200 million mu (1 mu = 0.0666 hectare) of crops having taken property life insurance. About 219 million person times have purchased life insurance. Among this tide, Chinese farmers and rural enterprises have demonstrated their market potentialities. According to PICC, the premium income from rural insurance exceeded 2 billion yuan ($US370 million) at the end of 1990. By now over 300 million farmers have had their private properties insured, mostly against fire, flood and other disasters.

Insurance coverage has expanded from enterprises and household property mainly in 1980s to include more than 200 types covering motor vehicles, transported cargo, crop-growing, stock-breeding, aquatic-raising, product liability, construction and installation engineering, life, pension, personal accidents etc.

3. Classes of insurance

Insurance business is increasing rapidly due to the growth of joint ventures with foreign capital, co-production with foreign concerns, compensation trade and the State's offshore oil exploration, and labour export. PICC has continued to provide marine cargo transport insurance, insurance on China exports and imports, aircraft and ocean-going ship insurance etc. while introducing new coverage so as to afford fuller insurance protection to foreign investors and concerned domestic units. At present, more than 30 classes of new business are being underwritten by PICC. These include:

- Ocean marine cargo insurance for China's imports and exports;
- Insurance relating to exploration for offshore oil e.g. drilling unit property insurance, including platforms, drilling rigs, drilling ships and rigs;
- Workshops, supply ships and aircraft insurance, cost of control expenses, seepage, pollution, contamination and clean-up expenses;
- Redrilling expenses;
- Loss, damage and expenses caused to third parties;
- Protection and indemnity risks;
- Offshore personal accident insurance;
- War risks and political hazards;
- Ship, aircraft, motorcar insurance;
- Investment insurance;
- Liability insurance (including employers' liability and products liabilities);
- Insurance for Contractors All Risks and Erection All Risks (CAR & EAR);
- Enterprise and private property insurance;
- International reinsurance;
- Insurance relating to processing of foreign materials and compensation trade, fishing boat run jointly with foreign corporation on cooperative basis, ship-building, drilling platform construction;
- Property insurance relating to joint ventures, covering machinery breakdown, business interruption, personal accident;
- Surety and performance bonding;

- Exhibition liability insurance;
- Personal accident insurance;
- Political risk insurance; and
- Tourism life insurance.

4. Major insurance coverage

Cargo transport insurance

Marine insurance

FPA (free of particular average) *covers* (a) total loss of whole consignment caused by natural calamities or accidents to the carrying conveyance; (b) loss consequent on falling into sea of entire package or packages during loading, transhipment or discharge; and (c) loss of or damage caused by the carrying conveyance being grounded, stranded, sunk or in collision with floating ice or other objects by fire or explosion. Sacrifice in and contribution to general average and salvage charges.

WA (with average) *covers* all liabilities under FPA as well as partial loss caused by natural calamities or accidents, which is not recoverable under FPA.

All risks *cover* all liabilities under FPA and WA as well as all loss or damage arising from external causes.

Overland transport insurance *covers* loss of or damage caused by natural calamities or accidents, such as collision, overturning etc. of the carrying train or trucks in course of transit.

Parcel post insurance *covers* loss of or damage to parcel or parcels by natural calamities or accidents in the course of sending by post.

Air transport insurance *covers* loss of or damage caused by natural calamities or accidents such as lightening or explosion, collision, crashing etc. of the carrying aircraft in course of transit.

Motor insurance *covers* hull and third party liability insurance.

B. ORGANIZATIONS

Insurance business in China is all run by the State. At present, there are companies designated by the State to conduct insurance business:

- The People's Insurance Company of China (PICC);
- The China Insurance Company (CIC);
- The Tai Ping Insurance Company (TPIC);
- The Agricultural Insurance Company of Xinjiang Production and Construction Corporation;

- The Ping'an Insurance Company; and
- The Communication Bank

CIC and TPIC operate under the guidance of PICC and have branches in Hong Kong, Macau and Singapore specializing in overseas business.

1. Internal network of People's Insurance Company of China (PICC)

PICC has about 2,800 branches and sub-branches in 30 provinces, municipalities and autonomous regions (with the exception of Taiwan Province of China) with a total number of about 80,000 staff across the country.

PICC has 41 year-old insurance operation and underwritten 95 per cent of China's total insurance business. Its insurance premium income in 1990 came up to $US420 million. The total assets in 1990 reached RMB 2,204,585,777.

In 1991, the income from overseas insurance business reached $US425 million. The figure was largely attributed to the increased import and export value which stood around $US100 billion in 1991. The increased foreign investment totalling $US46.5 billion in 1991 in China helped to expand premium income.

In addition to the coverage practised in the past, China has recently introduced political, anti-government riots, contractors' and export credit insurance as well as tourist life insurance to expand insurance business. The types of insurance have come up to more than 100.

2. PICC's external business relations

PICC has over 300 agencies in 120 countries and regions and entrusted by 111 foreign insurance companies with offering compensation and examination services for their foreign counterparts in China. By now Lloyds of London has entrusted the PICC branches in Beijing, Shanghai, Dalian, Guangzhou and Tianjin to act as its examination agents in China.

PICC has also actively participated in the international reinsurance business. Up to the end of 1991 PICC has established reinsurance relations with 1,012 insurance companies in more than 100 countries involving huge amounts of funds with foreign firms which are basically under written by foreign insurance companies. Such project includes the Daya Bay Nuclear Power Station. The launching of the Asia Sat. 1 telecommunication satellite, 200 big and medium-sized passenger planes for CAAC and over 1,000 ocean-going vessels for China's ocean-shipping departments.

In addition, PICC has joined several international and regional insurance organizations:

(a) Reinsurance Group of the Federation of Afro-Asian Insurers and Reinsurer;

(b) Asian Reinsurance Corporation which is assisted and supported by the United Nations Conference on Trade and Development and the United Nations Economic and Social Commission for Asia and the Pacific;

(c) South Place Syndicate, as a member of New York Insurance Exchange (with investments from 14 foreign insurance companies organized by the American Continental Insurance Company Ltd.);

(d) China-America Insurance Company Ltd., Bermuda, a joint venture founded in 1980 in conjunction with the American International Group, specializing in business related to China's trade and economy in North America and reinsurance throughout the world with a branch in New York;

(e) China Reinsurance Company Ltd., a joint venture in Hong Kong between PICC and branches of CIC and TPIC (both of China) and the Ming An Insurance Company Ltd. of Hong Kong.

In addition, PICC opened a liaison office in London in 1981.

3. Liaison and representative office of PICC abroad

London Liaison Office:

Established in January 1981, the London Liaison Office is PICC's overseas institution in the United Kingdom located in the city of London.

The main tasks for the office are as follows:

- Researching and studying the changes and developments taking place in the London insurance market and its trends;
- Assisting PICC's Head Office in contacting with broking firms (brokers), insurance and reinsurance companies and other relevant units in the United Kingdom;
- Assisting the Head Office and its branches to handle marine cargo and marine hull claim cases and other reinsurance business; exchanging information and working in coordination with the Head Office to promote business;
- Assisting the Head Office to train staff by arranging them to study at work in the United Kingdom; and
- Arranging and receiving visiting delegations to the United Kingdom from the Head Office, branches and other units.

Following its establishment, through publicizing the company's business policies, widening contacts with British underwriters and strengthening connections and cooperations with them, PICC Liaison Office in London has maintained good relationship with the British insurance industry. The influence of the company has also been extended and the business ties with the London insurance market become even closer.

Address: 100 Fenchurch Street, London; tel.: 01-4889696; telex: 8814239; fax: 01-4813401.

New York Liaison Office:

Established on 1 August 1988, the office is PICC's overseas institution in the United States.

The main tasks for the office are:

- Furthering mutual understanding between the insurance communities of China and the United States;

- Promoting their business cooperation; and
- Assisting PICC's marine claim agents in the United States to proceed their work.

In addition, it also provides insurance consultancy to the Chinese commercial institutions in the United States, supervises and coordinates law units that involve PICC's interests and deals with matters entrusted by PICC's Head Office and its branches.

Address: One World Trade Center, Suite 3333, New York, N.Y. 10048, U.S.A; tel.: (212) 775-0048; telex: 420623; fax: (212) 775-7273.

Hamburg Representative Office:

The office is one of PICC's overseas institutions established on 27 October 1988. It is located near the Hamburg Municipal Hall where many German insurance and reinsurance companies and broking firms are centered so communications and contacts with them are very convenient.

The main tasks for the office are as follows:

- Further strengthening ties with the German underwriters so as to promote the friendly cooperations with them;
- Building up connections with German commercial circle and upgrading services; and
- Conducting research work so as to be better acquainted with the German insurance market.

Address: Rodingsmarkt 16, Stock VI 2000, Hamburg II, Germany; tel.: 040-363641; telex: 2166216; fax: 040-367800.

Tokyo Representative Office:

Established on 29 March 1989, the office is PICC's overseas institution in Japan, situated in a downtown financial district on the east of the Japanese Palace.

As a bridge connecting insurance industries of China and Japan, the office is mainly responsible for:

- Promoting exchange business, and increasing personnel contacts between the two countries;
- Enhancing connections through different channels for direct reinsurance exchange with the Japanese underwriters;
- Strengthening cooperation and contacts on matters of cargo surveying, claim settling and reimbursement;
- Providing better service and insurance consultation for both Chinese and Japanese customers; and
- Strengthening the researches and studies on Japanese insurance market.

Address: 23-3 Ichibancho Chiyoda-ku, Tokyo 102, Japan; tel.: (03) 288-0221; fax: (03) 288-0229.

X. CHINA'S FOREIGN TRADE TRANSPORTATION

A. MODES OF TRANSPORT FOR CHINA'S FOREIGN TRADE

1. Waterway transport

China has more than 50,000 rivers, most of them are ice-free year round. It offers favourable conditions for inland water transport.

The Yangtze River has a navigation channel of 6,300 kilometres long and its waterway depth is currently expanded from 2.1 metres to 2.9 metres at the river's Chongqing-Yichang section, and from 2.5 to 4.0 metres at Wuhan-Anqing section, and from 1.7 to 3.2 metres at Yichang-Wuhan section, and the section from Nanjing downwards the Yangtze River Mouth is 10.5 metres. The Chongqing-Yibin section of the river is now being dredged to allow ships of up to 1,000 deadweight tons to navigate.

The project to enlarge the Yawosha Channel at the Yangtze estuary, the only way for ships to enter the river or the sea, began in November 1989 and was completed and put into operation in March 1990. The new channel, 4,250 metres long, 250 metres wide and 7.3 metres deep, makes the navigable conditions much better than before.

Waterway transport has been China's important transport system. In 1990, China's total dead weight tons reached 37.5 million (dwt), doubling the 1978 figure, and the waterway freight transported totalled 830 million tons. The volume of goods transported through waterway accounted for one-fifth of the nation's total.

According to statistics, steamers and barges in the country carried a total of 222 million passengers/trip in 1990, an 8.5 per cent drop from the previous year, and 582 million tons of cargo, down 1.9 per cent. In other words, they shipped 17.546 billion persons per kilometre, down 7.7 per cent, and 1,090.445 billion tons of cargo per kilometre, up 10.8 per cent.

In 1990, main coastal ports handled about 480 million tons of cargo, a 5.5 per cent increased over the previous year. Shanghai Port alone handled 145.6 million tons, one-fifth of the nation's total, setting a record high for six consecutive years. Inland harbours handled more than 700 million tons of cargo, of which, main harbours along the Yangtze and Heilongjiang rivers handled 150 million tons, up 2.5 per cent over the previous year.

2. Ocean transport

China has a coastline of 18,000 kilometres along some 20 large and medium-sized developed coastal cities covering across 10 provinces and autonomous regions. Over the last 10 years, China invested a substantial amount in improving and expanding port facilities to meet the growing needs of foreign trade expansion. In 1989, China built and put into operation 27 deep-water berths and 68 medium-sized and small berths, adding a total annual handling capacity of 48 million tons of cargo. By the end of 1990, there was a total of 251 deep-water berths in China.

China has also heavily invested in expanding and modernizing its ocean-going fleets. Now ocean transportation system has played a major role in moving foreign trade cargoes. In 1990, 90 per cent of the country's foreign trade amounting to 160 million tons of import and export cargo was moved through the sea ports.

The transport network for fuels, passengers, and import and export alike is constantly working at full capacity. With the opening of the coastal cities and Hainan province, and the expanding development of the special economic zones, trade and economic exchanges with other countries are bound to increase. Pressure on the ports is rising steadily.

The following ports are open for direct handling of foreign trade: Shanghai, Dalian, Tianjin (Xingang), Qingdao, Huangpu, Qinghuangdao, Beihai, Fuzhou, Lianyungang, Guangzhou, Longkou, Wenzhou, Yingkou, Yantai, Ningbo, Shantou, Basuo, Fangcheng, Zhangjiang, Haikou, Xiamen, Zhangjiagang, Nantong, Shijiu, Weihai (see a diagram on page 177).

(a) Shanghai Port

The port has about 181 berths, 55 are able to receive 10,000-ton freighters. Each year, more than 2,000 foreign freighters from more than 160 countries and regions pass through Shanghai, in addition to over 10,000 Chinese freighters. The port has modern facilities to handle bulk liquid and powder form of chemicals.

With cargo handling capacity of over 146 million tons in 1989, the port is the largest in China, accounting for over 30 per cent of the country's international trade. But the port can only receive freighters of up to 30,000 dwt.

Satellite ports are being built nearby so that cargoes can be broken down and carried on to Shanghai by smaller vessels. Foreign freighters will also be able to sail directly into China's largest river – the Yangtze River.

Electronic remote control and television monitoring have been introduced at the harbour.

The port of Shanghai is situated in the lower stream of the Huangpu River, at 31°14'N, 121°30'E.

(b) Qinhuangdao Port

The Port of Qinhuangdao situated at 39°54'N, 119°37'E, was built in the Gulf of the Bohai Sea in 1903. It is the third largest port in China. It offers a larger capacity for taking in and discharging cargo than the railway.

Qinhuangdao is an ice-free port with deep and broad water. It handles more coal exports than any other port in China (80 per cent of China's coal for export). Each year it deals with over 30 million tons of outgoing coal, 80.3 per cent of which is for export, mainly to Japan.

Now the Port has been changed into a comprehensive one with 10,000 dockers and 29 berths and 22 are deep-water berths for sending out energy resources. Its oil wharf alone is a mile long.

(c) Tianjin (Xingang) Port

Xingang situated at 39°00'N, 117°43'E, is the main port on the western shore of Bohai Sea in north-east China. It serves as the main port of the industrial city of Tianjin and also serves as the major port of entry to the capital city of Beijing, which is about 175 kilometres away from Xingang Port.

The port has 39 berths, 29 of which are capable of accommodating ships of 10,000 tons or above with a total annual cargo throughput of about 20 million tons. The first specialized container berth is almost 400 metres long and can accommodate vessels carrying 1,300 containers each. Container services have been started with the United States, Japan, Australia and Hong Kong. Yard stacking provides storage for up to 6,828 containers.

Another modern container berth capable of handling 100,000 standard containers annually and two general cargo berths capable of handling 670,000 tons are in operation at Tianjin Harbour. After its completion in 1985, the Port can now handle between 300,000 and 400,000 containers a year, and some are being refrigerated. Now the Port is equipped with cranes, floating cranes, conveyers and mobile cargo-handling machinery. The maximum lifting weight is 150 tons.

A computer system is now employed. Wharves, particularly container wharves, are rail-served. There is a shipyard in the locality, and temporary repair services can be rendered to foreign vessels.

(d) Dalian Port

The port is in Dalian Bay at 38°56'N, 121°39'E. The port has 35 berths, 28 of which are for ships of 10,000 tons and more cargo work is done with ships berthed alongside. Its largest oil terminal can handle oil tankers of up to 100,000 tons. The port currently handles 45 million tons a year.

The port is equipped with cranes and various types of mobile machines, belt conveyers, floating cranes and large-sized installations for loading and unloading. The maximum lifting weight is 600 tons.

Tug-boats, lighters, oil boats and water boats are available. Wharves are rail-served, so that cargo can be handled directly between ship and train and through transport between land and sea which is expected. There is a shipyard in the locality and general repairs can be carried out on foreign vessels.

(e) Qingdao Port

The port of Qingdao is situated in Jiaozhou Bay at 36°04'N, 120°20'E on the southern coast of the Shandong Peninsula. Dagang wharves have a frontage of 3,000 metres. There are altogether 32 berths, 16 berths of which are for 10,000-ton ships. Cargo work is done with ships berthed alongside. There is also an oil terminal at Huangdao which can berth one 50,000-ton oil tanker.

The port is equipped with lifting machinery, a mechanized conveying system for loading coal, and various kinds of mobile machines. The maximum lifting weight is 250 tons. Tug boats, lighters and harbour work craft are available. Wharves are rail-served. There is a shipyard in the locality, and temporary repairs can be carried out on foreign ships. The cargo throughput in 1985 was 26.1 million tons.

(f) Huangpu Port

The Port of Huangpu is situated in the mouth of the Pearl River at 23°06'N, 113°26'E, 31.5 kilometres southeast of the city of Guangzhou. The total length of frontage of the wharves is 2,200 metres. There are altogether 28 berths, 22 of which are deep-water berths for 10,000-ton ships. Cargo work is carried out alongside or by lighters.

The port is equipped with cranes, belt conveyers, grain suckers and various kinds of mobile machines. The maximum lifting weight is 250 tons. Tugs, lighters and launches are available. Wharves are rail-served. General temporary repairs can be affected to foreign ships.

(g) Zhenjiang Port

The Port of Zhenjiang is situated at 32°10'N, 119°39'E, where the Yangtze River and the Grand Canal meet.

In the period of the Sixth Five-Year Plan, 4 deep-water berths for sea-going ships of 25,000 dwt and 8 medium and small-sized berths were completed in Dagang Area. The total cargo throughput was 5.85 million tons in 1985.

The Port of Zhenjiang is composed of an old port area and a new port area and become one of the most important sea-river-canal transhipment terminals.

(h) Zhangjiagang Port

The Port of Zhangjiagang is situated at 31°58'N, 120°24'E. It is a new port located on the south bank of the down stream of the Yangtze River. The construction of the Port began in 1968. In 1970, two floating pontoon wharves (one for ships of 10,000 dwt and above, and another for ships of 5,000 dwt) were completed.

In the period of the Sixth Five-Year Plan, two general cargo berths for ships of 10,000 dwt and above were completed, thus providing an additional throughput capacity of 0.7 million tons. Now, the Port has a total throughput capacity of 2.8 million tons and has become one of the important terminals for sea-river-canal transhipment purpose.

(i) Nantong Port

The Port of Nantong is situated at 32°01'N, 120°49'E. It is a river port at the down stream of the Yangtze River. The port was opened up in 1904. At present, it is composed of three stevedore districts: Tiansheng, Nantong and Langshan.

In the period of the Sixth Five-Year Plan, one newly-built general cargo berth for vessels of 25,000 dwt and one transhipment platform for ships of 35,000 dwt were built.

There are now 14 berths, three of which are deep-water berths for ships of 10,000 dwt and above. The cargo throughput in 1985 was 10.29 million tons. It is now one of the important sea-river-transhipment terminals.

(j) Nanjing Port

The total annual cargo handling capacity of Nanjing Port comes to 42 million tons, after No. 35 wharf handling two million tons put into operation in 1989. In 1990, two 10,000-ton class deep-water berths, three 1,000-ton class berths and six 15,000-ton class berths and seven medium-sized berths were completed at Nanjing Port, increasing the wharf's annual handling capacity to 6.44 million tons, making it the largest wharf on the Yangtze River.

Featured with deep-water and wide water surface, the Yangtze River mouth can allow 10,000 dwt ocean-going ship to sail straight to Nanjing, a 5,000 dwt ship to Wuhan, and a 1,000-dwt ship passing through the Three Gorges to Chongqing. Along the Yangtze River ports, four international routes have been opened to link the Yangtze River.

(k) *Yingkou Port*

The port is situated at 40°18'N, 122°06'E and has two 10,000-ton class sundry berths with an annual cargo handling capacity of about six million tons of goods. The port is in Liaoning province. The coal berth for self-unloading ships of 30,000 dwt and four deep-water berths were built in 1986.

(l) *Longkou Port*

The port, located in Shangdong province, has one 10,000-ton class coal berth, one 10,000-ton class sundry berth, one 10,000-ton class passenger/sundry berth, and one 5,000-ton class passenger, to handle 2.2 million tons of cargo including 1.5 million tons of coal annually.

(m) *Shijiu Port*

The port of Shijiu is situated on the coast of the Yellow Sea at the intersection between the Shandong Peninsula and the Subei shoals, being 35°33'N, 119°25'E. It is a newly-developed open sea deep-water port in the period of the Sixth Five-Year Plan. In the first phase, two deep-water berths were newly built (one for bulk coal carriers of 100,000 dwt, and the other for carriers of 25,000 dwt (in fact, two carriers of 100,000 dwt could also be berthed), with a total berth length of 452 metres and a water depth of 17 metres. The designed annual exporting capacity is 15 million tons of coal.

(n) *Fengcheng Port*

The Port of Fengcheng in the north coast of Beibu Bay, is situated at 21°37'N, 108°21'E. It is one of the newly-developed deep-water ports in the south-west of China in the period of the Sixth Five-Year Plan. Two deep-water berths for vessels of over 10,000 dwt were completed and put into use in October 1983. And then, in 1985, another deep-water berth for ships of 15,000 dwt was completed.

Four berths for ships of 15,000-25,000 dwt and above were completed in 1986. Now there are eight berths, seven of which are deep-water berths with an annual throughput capacity of 4.7 million tons.

(o) *Lianyungang Port*

The Port of Lianyungang is situated at the south end of Haizhou Bay of the Yellow Sea and the east end of Longhai Railway Line, at 34°45'N, 119°27'E. The port was opened in 1933. The cargo throughput in 1985 was 9.29 million tons.

In the period of the Sixth Five-Year Plan, the newly-built pier No. 3 with 4 general cargo berths for ships of 10,000 dwt and above was built. A new area, Miaoling, was developed and would be completed in the period of the Seventh Five-Year Plan.

(p) *Ningbo Port*

The Port of Ningbo is situated at 29°53'N, 121°33'E, where Yongjiang, Yaojiang and Fenghuajiang meet. It is located at the south coast of Hangzhou Bay of the East China Sea. At present it is composed of three port areas, i.e. the old Port Area, Beilun Area and Zhenhai Area.

The Port of Ningbo was opened in 1844, and has to date a history of more than 140 years. In the period of the Sixth Five-Year Plan, three deep-water berths (one for unloading iron ore of 100,000 dwt ship and the other two for ships of 25,000 dwt) were completed in Beilun Area. And in Zhenhai Area, two berths, one of which being for vessels of 10,000 dwt and above, were completed.

At the end of 1985, there were altogether 21 berths, four of which are deep-water berths for vessels of 10,000 dwt and above. The annual throughput capacity was 26.7 million tons.

In addition, a radar navigation system (first used in China) was also completed and put into use. They include three radar stations, i.e. Xiaqi, Qitou and Daxie, covering the whole entrance channel of 30 nautical miles long and the whole water area of the Port.

(q) Xiamen Port

The Port of Xiamen in the south of Fujian province is situated at Jinmen Bay, at 24°27'., 118°04'E. It was opened up in 1683 and developed into a trading port in 1843.

In the period of the Sixth Five-Year Plan, Dongdu, located between Shuangshishan Hill and Niutoushan Hill, was chosen as the site for a new port area. The project of the first phase which was completed in 1984, was to build four deep-water berths for vessels of 10,000 dwt and above with an annual throughput capacity of 2.09 million tons.

3. Rail transport

Railways have been the mainstay of China's transport network and now carry 60 per cent of national passenger traffic and 70 per cent of all freight. Railway development is an important factor in the growth of the national economy and raising people's living standards.

China has the total railway lines of 53,340 kilometres, 6,900 kilometres of which are electrified and 9,000 kilometres are suitable for diesel locomotives. All provinces, municipalities and autonomous regions except Tibet, Taiwan and Hainan, are incorporated in the national rail network.

The volume of rail movements has been expanding rapidly in recent years. In 1990, 957 million passengers and 1.46 billion tons of cargo were recorded with the turnover freight reaching 1,322 billion tons-kilometres. Since the adoption of the open policy in 1979, the railway network has grown rapidly. The present growth rate means an extra 70 million passenger and 50 million tons of freight per year. Practically, all the major coastal cities have rail connections with the interior. More than 200 million tons of goods pass in and out of each of these ports by rail each year; this figure is increasing at an annual rate of 10 million tons.

In 1990, China invested RMB 6.717 yuan in railway construction and built 285.5 kilometres railways, 248.7 km of railways were double-tracked and 551 kilometres were electrified. Construction of 19 major railway-related projects under the State are also conducted.

Container transportation moved by railway has been introduced, but in a small capacity. By 1990, China has a total of 264,000 containers handled by 318 stations and 43 international container mail lines.

China has also entered into cooperation with several foreign countries and international organizations for railway construction projects, the majority of which are for upgrading existing lines and construction new lines with foreign loans. So far some agreements have already been signed. Some are about to be signed with the World Bank, Asian Development Bank and Japanese Bank.

However, railway transport is mainly for China's domestic trade and only a small capacity is used internationally.

It comes under two categories:

(i) International railway transport from China to East European countries and the Democratic People's Republic of Korea (known as SMGS);

(ii) International railway container transport via Siberia to European countries and the Islamic Republic of Iran (known as TSR).

The conversion turnover was 1,340.7 ton/km. in 1990. An average of 72,919 wagons were loaded daily. The coal turnover made up over 40 per cent of the overall railway turnover. An average of 28,479 coal wagons were loaded daily. The coal turnover was 105 per cent of the overall annual plan, reaching 608.91 million tons in 1989, an increase of 7.8 per cent or 44.11 million tons over the previous year. Its growth rate was higher than that of freight turnover. Of the total coal turnover, 168.9 million tons were shipped out of Shanxi Province, accounting for 100.7 per cent of the annual planned target, an increase of 10.87 per cent of 16.48 million tons over the previous year. Meanwhile, transport of key materials such as oil, cement, chemical fertilizer, salt and phosphate had all fulfilled or overfulfilled the country's targets.

In 1990 China's railway also moved 5.38 million containers of 9.47 million tons of goods, up 6 per cent and 11 per cent. China built 200,000 one-ton and 6,500 ten-ton containers in 1989 and moved 46,223 international containers in the same year.

4. Air transport

By the end of 1990, China has opened 378 air routes, linking China's 94 large, medium and small cities as well as remote regions and areas, totalling 472,000 km. in length. There are direct routes between Beijing and each province and municipality on the mainland.

China has signed civil aviation agreements with more than 30 countries and developed airlines business with more than 100 countries and regions. It has also established 44 international routes to 37 cities in 28 countries and regions.

China has air service connections with the Democratic People's Republic of Korea, Pakistan, France, Germany, the United States of America, the United Kingdom, Ethiopia, Switzerland, Romania, Yugoslavia, Albania, Japan, the Islamic Republic of Iran, Myanmar, the Philippines, Thailand and Australia, etc. Although the volume of cargo moved by air is small and the air freight rate is high as compared with ocean and rail transport, air transport is particularly attractive for high-value goods, perishable and fresh goods, small packages and goods that are urgently needed.

Air China National Foreign Trade Transportation Corporation cargo service is a safe and speedy mode rendered by the China National Foreign Trade Transportation Corporation (SINOTRANS) dealing with cargo to Europe, North America, Japan and South-East Asia. SINOTRANS also deals with air courier service having branches throughout China and a world-wide network of agents handling express parcels to and from more than 80 countries and 350 cities.

China has now joint ventures with foreign countries to provide express parcels service from China to other parts of the world to meet the needs of international trade.

Table 1. Number of berths at principal seaports in 1990

5. International multimodal transport and containerization

To promote foreign trade and economic interchanges between China and foreign countries, international multimodal transport and cargo consolidation, especially Hanger Container, have been introduced in China in recent years. Multimodal transport has been applied to cargo movement to Japan, the United States, Canada, West Europe, North Europe, Mediterranean, East Africa, Middle East, Far East, Australia and others.

Containerization is a very important technical innovation in transport. Having the merits of high efficiency in cargo handling, quick turn-round, reducing cargo shortages and damage, economical packing, low labour intensity and simplified formalities etc., it is now being extensively applied to sea, land and air transport throughout the world. China first introduced containerization to sea-borne export goods in 1973. In recent years, China has, together with the departments of communication, put in great efforts in developing movement of containers by sea. A number of container yards and container freight stations have been set up by China. By now, major ports are connected with 14 regular container routes, and the number of containers moved inward and outward have been increasing by folds yearly.

China has also been rapidly developing movement of containers by other modes of transport. In 1980, it started to move containers over the Trans-Siberian Railway Landbridge (TSR) to the Islamic Republic of Iran and to 17 European countries. Over the past 11 years, the number of containers has been increasing fairly and quickly and the result proved satisfactory. The variety of commodities has also increased. There are now more than 20 loading stations in 14 provinces and cities handling TSR containers.

In the past few years, Hong Kong and Fujian-Hong Kong direct highway container services were put into operation. Services are provided to issue bills of lading, arrange customs clearance and negotiate payment locally for customers. As formalities are simplified, services upgraded and freight charges lowered, these services are appreciated by customers at home and aborad.

Multimodal transport is a combination of at least two of the modes of transport by sea, land and air. Because of its simplified formalities, a single bill of lading being used for the whole passage, safety, promptness, and "door-to-door" service, its advantages are becoming more and more apparent in international trade. In 1976, China started using this mode of transport, mainly a land-sea combination via Hong Kong. It was only after 1980 that China began to move containers by multimodal transport. This movement is being expanded.

With further diversification of international trade, conventional single–mode transport can no longer meet the needs of trade development. The extensive adoption of advanced means of transport and techniques in organization, comprehensive utilization of various modes of transport, selection of best routing and planning and rendering better services for foreign trade have become new challenges for China.

Containers which have been employed on 12 international shipping routes include:

- Huangpu–Japan route
- Shanghai–Japan route
- Singang–Japan route
- Dalian–Japan route
- Shanghai–Australia route

- Xiangang–Australia route
- China–Persian Gulf route
- China–the United States route
- China–Europe route
- China–Mediterranean route
- China–Hong Kong route
- China–South East Asian route, including Singapore, Thailand, Malaysia, Indonesia, etc.

B. ORGANIZATIONS IN CHARGE OF FOREIGN TRADE TRANSPORT

According to the Chinese Ministry of Communications, there are some 133 shipping companies in China undertaking international ocean shipping business. They have a total of 3,250 ships with a total of 19 million dwt, sailing to more than 100 ports in 30-plus countries and regions in the world. The major ones handling foreign trade transport are:

1. China National Foreign Trade Transportation Corporation

The China National Foreign Trade Transportation Corporation (SINOTRANS) was established in 1955. It is an organization under the Ministry of Foreign Trade and Economic Cooperation specializing in foreign trade transport and acting as a general forwarding agent of the import and export corporations under the same Ministry, actively moving all categories of imports, exports and non-commercial goods by sea, land, air and parcel post.

SINOTRANS has 56 branches or sub-branches locating at the main ports and in all provinces, municipalities and autonomous regions, nine representative offices abroad, 20 joint ventures with foreign countries stationed abroad and 45 joint ventures with both China's inner locations and foreign countries stationed in China. It also has agents at more than 300 ports in over 140 countries and areas. In addition, it has agents for air freight in Germany, the United Kingdom, Japan, France, the United States, Denmark etc. A subsidiary company named China Interocean Transport Inc. has recently been established in New York. It is engaged in ocean, air, land, "door-to-door" and multimodal transport between the United States and China.

The branches in all provinces, municipalities and autonomous regions (except Tibet) have fleets serving foreign trade, and a certain number of transit warehouses and barges are made available at all times and all main ports along the coast and the Changjiang.

SINOTRANS is ready to accept business of imports and exports, materials for processing and compensatory trade by sea, land and air at customers' request at home and abroad.

The main scopes of its activities are:

(a) Arranging space booking on vessels, cargo coordination, receiving and delivering cargoes at ports, customs clearance and inspection of sea-borne imports and exports; forwarding cargoes imported at the customer's request from the ports to various consignees in China; moving cargoes for export and non-commercial goods of the provinces, municipalities and autonomous regions from the hinterland to the ports, taking delivery of cargoes, arranging warehousing, assembling for short distance transport and handling and stuffing containers for shipment.

Fumigation teams are stationed at the border stations and main ports along the coast with necessary fumigation equipment and specialized personnel who, at the customer's request, can undertake to fumigate by-products of animals and plants;

(b) Arranging dispatching, transiting, through-transport, receiving and delivering cargoes at border stations, distributing to end users, and customs clearance and inspection of imports and exports as well as handling, forwarding, stuffing and unstuffing containers moved by railway;

(c) Arranging combined land-sea and land-air transport for commodities exported from the provinces, municipalities and autonomous regions via Hong Kong;

(d) Arranging Trans-Siberian land-bridge container service traffic;

(e) Arranging space booking on international airlines, cargo consolidation and plane chartering for all kinds of imports and exports and also undertaking to deliver and receive cargoes at airports as well as customs clearance and forwarding at the customer's request;

(f) Arranging handling and truck haulage of all imports and exports;

(g) Moving personal effects for foreign embassies, consulates, representations, foreign exports and tourists in China by sea, land and air;

(h) Transporting non-commercial goods and exhibits for exhibition in China and forwarding cargoes in transit;

(i) Warehousing and distributing cargoes that can be arranged at some main ports abroad;

(j) Warehousing and distributing cargoes for Hong Kong customers at the transit warehouse in Shenzhen;

(k) Providing consultancy services for foreign trade transport.

Table 3. List of China National Foreign Trade Transportation Corporations

Sinotrans Airfreight Forwarding Corporation (SINOAIR)
Address: Import Building, Erligou, Xijiao, Beijing, China
Post Code: 100044
Telex: 22865 TRANS CN
Telephone: 2013651

China Business Marine Corporation Limited (SINOMARINE)
Address: Import Building, Erligou, Xijiao, Beijing, China
Post Code: 100044
Telex: 22866 TRANS CN
Telephone: 2016367

China Marine Shipping Agency (SINOAGENT)
Address: Import Building, Erligou, Xijiao, Beijing, China
Post Code: 100044
Telex: 22982 TRANS CN
Telephone: 2024422-273

Xiamen Business Marine Corporation Limited
Address: 74, Dongdu Road, Xiamen, Fujian Province, China
Post Code: 361012
Telex: 93167 XMBMC CN
Telephone: (0592) 42128

Sinotrans Shenzhen Development Company
Address: 40, Bao'an South Road, Shenzhen, Guangdong Province, China
Post Code: 518001
Cable: 7420 SHENZHEN
Telex: 420285 SZFTC CN
Telephone: 201094

China National Foreign Trade Transportation Corporation Hebei Branch
Address: 8, Jichang Road, Shijiazhuang, Hebei Province, China
Post Code: 050072
Cable: SINOTRANS SHIJIAZHUANG
Telex: 26211 HBFTC CN
Telephone: 22330

China National Foreign Trade Transportation Corporation Erlian Branch

Address: Youyi Road, Erlianhaote, Inner Mongolia, China
Post Code: 012600
Cable: SINOTRANS ERLIANHAOTE
Telephone: 643

China National Foreign Trade Transportation Corporation Manzhouli Branch

Address: 40, Erdao Street, Manzhouli, Inner Mongolia, China
Post Code: 021400
Cable: SINOTRANS MANZHOULI
Telex: 85043 NFTMB CN
Telephone: 3844

China National Foreign Trade Transportation Corporation Dandong Branch

Address: 2, Wujing Street, Dandong, Liaoning Province, China
Post Code: 118000
Cable: SINOTRANS DANDONG
Telex: 812018
Telephone: 23124

China National Foreign Trade Transportation Corporation Xi'an Branch

Address: 44, North Yanta Road, Xi'an, Shaanxi Province, China
Post Code: 710054
Cable: 1609 XI'AN
Telex: 70037 CMECX CN
Telephone: 21609

China National Foreign Trade Transportation Corporation Guangxi Branch

Address: 137, Qixing Road, Nanning, Guangxi, China
Post Code: 530022
Cable: SINOTRANS NANNING
Telex: 48129 GXTRS CN
Telephone: 26559

China National Foreign Trade Transportation Corporation Shanxi Branch

Address: 1, Jinci Road, Taiyuan, Shanxi Province, China
Post Code: 030024
Cable: SINOTRANS TAIYUAN
Telex: 28047 SFTTC CN
Telephone: 665327

China National Foreign Trade Transportation Corporation Heilongjiang Branch

Address: 73, Zhongshan Road, Harbin, Heilongjiang Province, China
Post Code: 150036
Telex: 87020 HWYC CN
Telephone: 220856

China National Foreign Trade Transportation Corporation Lianyungang Branch

Address: Xugou, Lianyungang, Jiangsu Province, China
Post Code: 222042
Cable: SINOTRANS LIANYUNGANG
Telex: 36904 LWYCO CN
Telephone: 23653

China National Foreign Trade Transportation Corporation Shandong Branch

Address: 24, Pujizhi Road, Qingdao, Shandong Province, China
Post Code: 266012
Cable: SINOTRANS QINGDAO
Telex: 32132 TRSQD CN
Telephone: 332642

China National Foreign Trade Transportation Corporation Fujian Branch

Address: 1, Shangbin Road, Fuzhou, Fujian Province, China
Post Code: 350001
Cable: SINOTRANS FUZHOU
Telex: 92129 CFTTF CN
Telephone: 557641

China National Foreign Trade Transportation Corporation Guizhou Branch

Address: 46, Jiefang Road, Guiyang, Guizhou Province, China
Post Code: 550002
Cable: SINOTRANS GUIYANG
Telex: 66043 FTTCG CN
Telephone: 24001

China National Foreign Trade Transportation Corporation Hainan Branch

Address: Binhai Road, Xiuying District, Haikou, Hainan Province, China
Post Code: 570011
Cable: SINOTRANS HAIKOU
Telex: 490218 TRANN CN
Telephone: 62081

China National Foreign Trade Transportation Corporation Tumen Branch

Address: 58, Tumen Da Road, Tumen, Jilin Province, China
Post Code: 133100
Cable: SINOTRANS TUMEN
Telex: 84231 TMWY CN
Telephone: 2713

China National Foreign Trade Transportation Corporation Shaanxi Branch

Address: 14, Dongyixiang, Jianguo Road, Xi'an, Shaanxi Province, China
Post Code: 710001
Cable: SINOTRANS XI'AN
Telex: 700206 CFTRS CN

2. China National Chartering Corporation

The China National Chartering Corporation (SINOCHART) is a specialized organization for centralized chartering of vessels under the Ministry of Foreign Trade and Economic Cooperation. It arranges chartering and booking space at the request of the China National Foreign Trade Transportation Corporation, the various import and export corporations and parties concerned at home and abroad. This Corporation was established in 1951 under the name, "China Overseas Transportation Corporation" and was renamed as "China National Chartering Corporation" in 1955.

SINOCHART has over 150 brokers in 22 countries and areas, such as the United Kingdom, Japan, Germany, the United States, Greece, Norway, Denmark, Italy, Singapore and Hong Kong, and has sub-branches in the main ports along the coastline (Shanghai, Tianjin, Guangzhou, Qingdao, Dalian etc.).

3. China Ocean Shipping Company

The China Ocean Shipping Company (COSCO), established in 1961, is a state-owned shipping enterprise engaging in international maritime transport. It is under the Ministry of Communications with its head office at Beijing and has subordinates and branches at China's major trading ports and 26 provinces and municipalities.

At present, COSCO owns and operates more than 610 vessels of different types, aggregating 14 million dwt, calling at 600 ports in 150 countries and regions, making COSCO the biggest maritime transport company in China and one of world's largest shipping companies. The vessels of COSCO include 73 full container vessels, 7 semi-cellular container vessels, 185 bulk carriers, 242 general cargo vessels, 69 multi-purpose vessels, 16 ro/ro, 14 tankers, 14 timber cargo vessels, 2 lashes and 2 passenger ships.

COSCO now operates on 46 international routes, including 36 international container routes to Australia, Northwest Europe, east and west coasts of the United States, east coast of Canada, the Mediterranean, the Gulf, Oceania, Japan, Southeast Asian countries and Hong Kong.

COSCO with 47 liner routes provides 140 sailing and service of "fixed shipping routes", "fix schedules", "fixed calling ports" and "pre-selection of vessel". COSCO has also diversified its services to combine freight with forwarding and to coordinate transports of land-water and river-sea-land as well as door-to-door intermodal transport services. The forwarding services of COSCO include receipt and delivery of cargoes, storage, transportation, stuffing and unstuffing of containers, customs procedures, arrangement of intermodal and inland door-to-door transportation by railway, road and inland waterway.

COSCO has set up overseas offices and representative offices in Japan, Singapore, Pakistan, Hong Kong, Bangladesh, Syria, Kuwait, Egypt, Romania, Italy, France, United Kingdom, United States, Canada, Panama, Australia, New Zealand, Thailand, and has established business relations with a number of international companies. It also has appointed agencies throughout the world to carry on the shipping business.

4. China Ocean Shipping Agency

The China Ocean Shipping Agency (COSA) is a state-owned company established in 1953. It undertakes agency business for ships calling at Chinese ports. It is under the Ministry of Communications.

Over the last 11 years, COSA provided services to more than 222,000 foreign-flag carriers calling at Chinese ports, tallying more than 600 million tons of goods. By 1990 there were 46 tally offices set up at seaports with 4,800 employees and the tally number of 30,536 foreign ships, 83.15 million tons of goods, and 832,000 TEUs of containers.

COSA has actively developed friendly cooperation with their counterparts abroad. It has signed bilateral tally agreements with Romania, Japan, Democratic People's Republic of Korea, Poland and established business relations with Singapore, Hong Kong and Germany.

XI. PROMOTION OF FOREIGN DIRECT INVESTMENT

A. SURVEY OF FOREIGN DIRECT INVESTMENT IN CHINA

The utilization of foreign capital is a new concept that appeared in China during the past twelve years. Its marks a turning point in the Chinese economy. In recent years, the economic system reform in opening to the outside world has become a driving force for China's successes in its modernization. And the promotion of foreign direct investment is an important part of this open-door policy.

In 1979, China first introduced special and flexible economic policies in the provinces of Guangdong and Fujian. In 1980, its established four special economic zones (SEZs) in Shenzhen, Zhuhai, Shantou and Xiamen. In 1982, favourable policies for the SEZs were extended to Hainan Island. In 1984, it opened 14 economic and technological development areas within them. In 1985, the Yangtze River delta, the Pearl River delta and the Minnan delta were opened to the outside world. By then, the open areas have included the whole of China's eastern coastal region. A foreign investment belt stretching from the south to the north has taken shape.

Since 1978, China has been adopting new measures to attract foreign investment to promote its foreign trade and economy. From 1979 to 1991 China absorbed foreign direct investment worth $US 52.338 billion, $US 23.275 billion of which were put to use. During the period, 42,027 joint ventures with Chinese-foreign capital, exclusive foreign investment and in cooperative form were set up.

Investors are from nearly 70 countries and regions. The countries and regions having direct investments in China include Hong Kong, Japan, Taiwan (Province of China), Macau, the United States, the United Kingdom, Philippines, France, Germany, Switzerland, Sweden, Denmark, Australia, Thailand, Norway, Austria, Singapore etc.

The venture projects involve light textiles and garment industries, pharmaceutical, electronics, machine-building, chemicals, metallurgical, electronics, building-materials, energy, motor-vehicle, transport and communication industries, fish farming, plantations, real estate, financing and leasing business, tourism, and other trade services.

Geographically, these enterprises are distributed across the country in provinces, autonomous regions, municipalities, and cities with separate listings in the State Plan. Their development embodies China's policy of opening which was first applied to SEZs and then step by step to coastal cities, coastal-open areas and inland areas.

Types of joint ventures by foreign investors include equity joint ventures, cooperative joint ventures, joint exploration, wholly-foreign owned ventures and compensation trade and other forms of using foreign investment.

In 1992 China signed agreements for $US5.3 billion in foreign government loans, an all-time high since 1979, when the country resumed borrowing from abroad. Between 1979 and the end of 1992, more than 20 governments promised to give soft loan to China totalling $US29.4 billion.

B. FORMS OF PROMOTING FOREIGN DIRECT INVESTMENT

1. Equity joint ventures

An equity joint venture takes the form of a limited liability corporation with the status of a legal entity. The parties to the venture decide through consultation with proportion of equity shares of each party. Equity investment may be in the form of equipment, cash, rights to the use of a site, factory buildings as well as industrial property rights, etc. Profits are distributed among all parties in proportion to their equity share. According to the Law of the People's Republic of China on Chinese-foreign Equity Joint ventures (amended on 4 April 1990) and other laws or regulations, the share of foreign participants shall in general not be less than 25 per cent. Under this form of venture, Chinese and foreign investors operate the ventures jointly and share risks, profits and losses.

The major differences between the law adopted in 1979 and the revised one in 1990 are as follows:

(1) An equity joint venture has a board of directors with a size and composition stipulated in the contracts and articles of association negotiated between the participants, and each party to the venture shall appoint and replace its own director(s). The chairman and the vice-chairman of the board shall be determined through consultation between the parties to the venture or elected by the board. Where a director appointed by the Chinese party or the foreign party serves as chairman, a director appointed by the other party shall serve as vice-chairman. The board of directors shall decide import issues concerning the equity joint venture based on the principle of equality and mutual benefit.

The function and powers of the board of directors shall be to discuss and decide on, pursuant to the provisions of the articles of association of the equity joint venture, all important issues concerning the venture.

The positions of general manager and deputy general manager(s) or the factory manager and deputy factory manager(s) shall be assumed by nominees of the respective parties to the venture.

(2) The State will not nationalize or expropriate equity joint ventures. Under special circumstances, based on the requirements of social and public interests, equity joint ventures may be expropriated in accordance with legal procedures, and corresponding compensation shall be provided.

(3) The term of operation of equity joint ventures may be agreed upon differently according to different lines of business and different circumstances. The term of operation of equity joint ventures engaged in some lines of business shall be fixed while the term of operation of equity joint ventures engaged in other lines of business may or may not be fixed. If parties concerned agree to extend the term of operation, they shall submit an application to the examination and approval authority not later than six months prior to the expiration of the operation term. The examination and approval authority shall decide, within one month of receipt of the application, to approve or disapprove the application.

2. Cooperative joint ventures

Under the arrangement of cooperative joint ventures, the Chinese participants provide the joint venture with land, natural resources, labour force, services, utilizable buildings, equipment or facilities etc. The foreign participants provide either capital or technology, key equipment, materials etc. The liabilities, rights and obligations on both parties are stipulated in the agreements and contracts signed by them. The proportions of distribution of products, revenues and profits are decided by all parties according to the terms of cooperation.

A cooperative joint venture may take the form as specified in the Law of the People's Republic of China on Chinese-foreign Cooperative Joint ventures or any other form through consultation between the parties. It differs from an equity joint venture primarily in that the capital contributions by the parties may not necessarily be expressed in terms of money and, therefore, profits will not be distributed in proportion to their equity shares, but in accordance with the agreed investment forms and proportions stipulated in the contract.

The major differences between Chinese-foreign cooperative joint ventures and Chinese-foreign equity joint ventures are:

(1) While the equity joint venture must be an entity with legal person status and must be set up inside China, the cooperative joint venture with legal person status may not be necessarily set up inside China. The Chinese party and foreign party may work as separate legal persons.

(2) All parties in the equity joint venture must agree with a common registered capital, and a part of the capital must be contributed in the form of cash by each party. In the case of cooperative joint venture neither entity of venture nor common registered capital are needed.

(3) The equity ratio must be calculated in money terms. The risk and profits are shared according to equity ratio, while cooperative joint venture may be made in different forms and the equity ratio is not necessarily calculated in money terms. The responsibilities and rights are specifically stipulated in contracts.

(4) The investment from all parties in the equity joint venture can be recovered only from profits. The assets of joint venture will be distributed through at the termination of the enterprise. For the cooperative joint venture, foreign investors are allowed to recover their investments before the termination of the enterprise. Where the Chinese and foreign parties stipulate in the cooperative joint venture contract that all fixed assets of the cooperative joint venture shall belong to the Chinese party upon expiration of the term of cooperation, they may stipulate in the cooperative joint venture contract method(s) whereby the foreign party first recovers its investment during the term of cooperation. Where the cooperative joint venture contract stipulates that the foreign party shall recover its investment before the payment of income tax, an application must be submitted to the finance and taxation authorities, which shall examine and approve the same in accordance with the State provisions relating to taxation. Under general circumstances, it is not permitted that foreign investors recover their investment, by contributing depreciation charges of equipment to the costs if the joint venture is legal person registered in China.

(5) The fee for using land of the equity joint venture must be paid in the price stipulated by the Government. The Chinese side may put the land use fee as its share of investment for the venture, and must hand over to the State the profit the Chinese party earns from the venture. In the case of cooperative joint venture, the Chinese party may contribute the land use right as its share in the venture and will not hand over the profit to the State.

3. Wholly foreign-owned enterprises

A wholly foreign-owned enterprise means an enterprise which is established within the territory of China in accordance with relevant Chinese laws with all the capital being invested by foreign investors, and does not include a branch institution established by a foreign enterprise and other economic organization within the territory of China. It shall take the form of a limited liability company and may also take other forms of organization with approval. It is subject to the jurisdiction and protection of Chinese laws.

A wholly foreign-owned enterprise to be established must be beneficial to the development of the Chinese national economy and must be able to gain remarkable economic results. It should meet at least one of the following two requirements:

(1) Adopting advanced technology and equipment which can help develop new products, save energy and raw materials, upgrade existing products and substitute importation; or

(2) Reaching 50 per cent or more of the annual output value of the export product in the total output value of all products of that year with a balance or surplus in the foreign exchange receipt and expenditure.

The establishment of wholly foreign-owned enterprise is prohibited in the following lines of business:

(1) News, publication, broadcast, television, film;

(2) Domestic commerce, foreign trade, insurance;

(3) Post and telecommunications; and

(4) Any other prohibited by the provisions of the Chinese Government.

The investment contributed by a foreign investor may be provided in freely convertible foreign currency or by machinery, equipment, industrial property right and know-how which are evaluated.

In selling products in the Chinese market, a wholly foreign-owned enterprise shall follow its approved sale ratio.

4. Joint development

This form of business is employed mainly in joint exploration for offshore petroleum. It generally takes two stages: geographical exploration, and exploitation and development. In the first stage, foreign partners undertake all risks, including all financial investment involved in the geographical exploration, while in the second stage, both Chinese and foreign parties make contribution to the joint business. When commercial production starts, returns from the development, less operation expenses, are to be distributed to the Chinese party in fixed portion, to both Chinese and foreign parties an amount to compensate for their invested capital together with accrued interest and to foreign parties a certain amount as a reward.

5. Compensation trade (counter trade)

Another common type of foreign direct investment in China is compensation trade. Under this type of trade, China normally is responsible for providing factory buildings and labour force, while foreign investors supply production equipment, technology and possibly technical and supervisory personnel. Part of the raw materials may also be supplied by foreign investors when necessary. Foreign investors are paid directly by means of the goods produced in the project in instalments for the cost of the technology, equipment and other materials supplied by them. If repayment in this form is difficult, the foreign firms are paid indirectly by means of other products or by a combination of other products and cash as agreed upon by both parties.

China has adopted two ways to raise funds for compensation trade. One wav is that the foreign investor obtains foreign bank loans to pay for the capital and equipment imported by the Chinese side and the Chinese repay the equipment cost and the bank interest with the goods produced. The other way is that the Chinese side uses foreign export loans from the foreign bank to buy production equipment and pays the bank the principal and interest in foreign exchange earned from sales of the finished goods.

6. Processing and assembling of supplies parts and components

Under this type of arrangement, foreign firms supply materials, while the Chinese enterprises process or assemble them into finished products according to the foreign contractor's designs, specifications and quality requirements. The material inputs supplied by foreign firms can be all or part of raw materials or semi-finished products and subsidiary materials, parts or components, and even packing and packaging materials, if necessary. All the products are passed on to the foreign contractors or their agents, who are required to sell them outside China. The Chinese enterprises receive a processing or assembling fee.

In principle, all machinery and equipment used are Chinese-make unless specific machinery and equipment needed are not available in China, in which case it can be imported, and the cost will be deducted from the final value of the export products or the processing fee. Such imported machinery and equipment and other facilities are exempted from duties and taxes.

For the settlement of processing fees, foreign contractors can either open letter of credit at sight on the Bank of China or make a cash payment when goods are delivered. The second method to settle accounts is that the foreign contractors fix a price for the materials or parts supplied and the Chinese side fixes a price for the finished products. The Bank of China opens for the Chinese side a usance letter of credit when the materials supplied arrive in China. And the foreign contractor's bank issues letter of credit at sight to the Chinese side after the finished products are shipped.

At present the processing and assembling contracts are concentrated on labour-intensive industries such as garment, textile, yarn and cloth-making enterprises, because labour cost in China is cheaper than in most other countries. China has also accepted orders for the processing or assembling of refrigerators, calculators, imitation leather, apparel, radio-tape recorders, digital watches etc.

Current practices for processing materials and assembling parts vary. Some are described below:

(1) Overseas firms provide all needed raw materials, auxiliary materials, packing and packaging materials or parts, components, elements and devices, and Chinese factories process or assemble them into finished products according to specifications, models, required quality and style. All finished products are delivered to the customer who transports them to a market outside China. The Chinese side receives a processing fee;

(2) Part of the auxiliary materials are provided by the Chinese factories, and the Chinese side receives the processing fee plus the cost of the goods supplied;

(3) Raw materials are furnished by the customer and a price is set for the finished product. The Chinese side earns the price difference between the raw materials and the finished product;

(4) Chinese factories which have surplus processing capacity and qualified technology may direct enter into contracts for processing and assembling business with overseas

merchants. They are regulated by the Chinese Government through local departments. Orders can also be accepted by local foreign trade corporations. The corporations sign contracts for processing and assembling business with foreign firms and organize factories for production;

(5) Some parts of machines, tools, inspecting meters and instruments may be brought in by overseas firms. Their cost will be paid in instalments from the processing fee earned by the Chinese factories. In some cases, equipment is offered free of charge by overseas firm and may be disposed of in any way foreign firms wish, including being transported back to the country of origin;

(6) Finished products in general use the trade-marks of overseas firms. If agreed by both sides, a Chinese trade-mark may also be used;

(7) Commodities which face quotas cannot take advantage of the Chinese export quotas, generally. In exceptional cases, this may be negotiated;

(8) The Chinese Government offers preferential treatment to encourage development of the processing and assembling business. Materials, parts and production equipment transhipped into China and the finished products transported out of China by foreign merchants are free of import and export duties, so long as the contract has been approved by the Chinese Government. Profits earned by the foreign firms are not taxed in China. In order to avoid losses to Chinese factories doing processing and assembling business, the Chinese Government gives them preference in foreign exchange control, finance and taxation within certain limits. As to funds, materials, power and transport as well as insurance, settlement of accounts and consultant services within China, the departments covering these fields offer as much support as possible.

7. Leasing

Foreign firms or manufacturers provide Chinese lessees with equipment, machines or other facilities directly or through leasing service corporations or leasing agents. Technical and managing services are usually provided. The Chinese lessees make payments by instalment according to the leasing charges agreed upon by the two sides. The foreign firm, or leasing service corporation or leasing agent, is responsible for customs formalities on imported equipment or machines. The length of the lease varies from three to five years or even longer, depending on the customer's needs.

8. Limited company

China will permit foreign investors to establish limited company (corporation) within the territory of the People's Republic of China with Chinese companies, enterprises or other economic organizations. The Chinese-foreign limited company will be established by sponsoring firm, and the sponsors will not be less than five persons. Enterprise with foreign investment may turn into Chinese-foreign limited company. And now, the relative offices are formulating the regulations concerning the Chinese-foreign limited companies.

C. POLICY ON THE ABSORPTION OF FOREIGN DIRECT INVESTMENT

1. Principles for absorbing foreign direct investment

China's principles of absorbing foreign direct investment can be summarized as follows:

(1) Investment must suit the needs of China's economic readjustment, development of the four modernization and improvement of the people's livelihood;

(2) Joint ventures within China's territory shall be able to promote the development of China's economy and the raising of scientific and technological levels for the benefit of socialist modernization;

(3) The principle of equality and mutual benefit and guarantee the legitimate rights, interests and profits of both parties must be respected;

(4) Efforts must be made to create a good investment environment and provide every possible convenience for foreign investors.

2. Priority areas

China's priority areas for foreign direct investment are adjusted according to its economic requirements, four modernization needs and the improvement of the living standards of the people.

According to the economic plan and modernization programme, energy, textile and other light industries, transport, communications and agriculture are the priority sectors for joint ventures as follows:

(1) Energy development, the building material and metallurgical industries;

(2) Machine manufacturing, instrument and meter industries and offshore oil exploitation equipment manufacturing;

(3) Electronics and computer industries, and communication equipment manufacturing;

(4) Light, textile, foodstuffs, medicine, medical apparatus and packing industries;

(5) Agriculture, animal husbandry and agriculture;

(6) Tourism and service trades; and

(7) Commercial, trade and finance.

3. Requirements for foreign direct investment

Joint ventures under application for establishment shall lay stress on economic results and shall comply with one or several of the following requirements:

(1) They shall adopt advanced technical equipment and scientific management which help increase the variety, improve the quality and raise the output of products and save energy and materials;

(2) They shall provide benefits in terms of technical renovation of enterprises resulting in less investment, quicker returns and bigger profits;

(3) They shall help expand exports and thereby increase income in foreign currency;

(4) They shall help the training of technical and managerial personnel.

4. Special autonomous rights

In general, the activities of joint ventures and cooperative enterprises are conducted under the guidance of China's State plan, rules and regulations. They can, however, enjoy special autonomous rights with regard to personnel, finance, production, material supply and sales, which are not granted to China's State-owned and collective enterprises. Their special rights may include rights to:

(1) make decision on production programme, management and wage;

(2) buy needed new raw materials, fuel and equipment including components, spare parts and accessories directly from the domestic and international markets, and sell the products in these markets;

(3) sign economic contracts with domestic and foreign enterprises;

(4) raise Renminbi yuan and foreign currency funds from internal and international financial institutions for production and management, and open accounts in Renminbi yuan and in foreign currencies with the Bank of China or other banks endorsed by it, with the freedom of deposition and withdrawing funds by themselves;

(5) establish their own financial management and other management system and determine their own system of profit distribution, financial budget and revenues and expenditures;

(6) reform and renovate production, diversity products and increase product quantity;

(7) decide on transfer, sale or mortgage of their entire or a part of their registered capital;

(8) revise their enterprises' regulations;

(9) decide on their termination, dissolution or merger with another economic entity;

(10) appoint or dismiss their general manager, deputy-general manager, chief engineer, chief accountant, auditor and other high-ranking staff members.

D. PREFERENTIAL TAX TREATMENT FOR FOREIGN DIRECT INVESTMENT

Under China's existing legislation, foreign investors must pay industrial and commercial consolidated tax, income tax and customs duties. The first two are basic taxes levied on foreign investors. However, foreign investors can enjoy freedom from tax or reduced taxes and customs duty in the following cases:

1. Consolidated commercial and industrial tax

Starting from 1 June 1985 a 5-per cent industrial and commercial consolidated tax was imposed on all foreign, Hong Kong and Macau corporations operating in China and other profit-making economic organizations.

If a foreign enterprise has offices in several parts of the country, each of these offices should pay its own taxes to local tax departments.

Those offices acting solely for their head offices and not receiving payment from clients for their services, and those appointed by enterprises in China to engage in business mainly outside China will be exempted from payment of the taxes.

The products produced by the ventures for export is exempted from the consolidated commercial and industrial tax.

The machinery for production, raw materials, transporting vehicle, office equipment, traffic vehicle imported by the investors is exempted from the consolidated commercial and industrial tax.

2. Income tax (profits tax)

The income tax on enterprises with foreign investments and the profits tax which shall be paid by foreign enterprises on the profits of their organizations or establishments set up in China to engage in production or business operations shall be computed on the taxable profits at the rate of three per cent. The profits tax on enterprises with foreign investment established in SEZs, foreign enterprises which have organizations or establishment in SEZs engaged in production or business operations, and enterprise with foreign investment of a production nature in economic and technological development zones, shall be levied at the reduced rate of 15 per cent.

The profits tax on enterprises with foreign investment of a production nature established in coastal economic open zones or in the urban districts of cities where the SEZs or the Economic and Technological Development Zones are located, shall be levied at the reduced rate of 24 per cent.

Any enterprise with foreign investment of a production nature schedules to operate for a period of not less than 10 years shall, from the year in which it begins to make profit, be exempted from profits tax in the first and second years and allowed a 50-per cent reduction in the third of fifth year. However, the profits tax on enterprises with foreign investment engaged in the exploitation of resources such as petroleum, natural gas, rare metals and precious metals shall be regulated separately by the State Council. Enterprises with foreign investment which have actually operated for a period less than 10 years, shall repay the amount of profits tax that has already been exempted or reduced.

Any enterprise with foreign investment which is engaged in agriculture, forestry or animal husbandry and any other enterprise with foreign investment which is located in remote underdeveloped areas may, upon approval by the competent department for tax affairs under the State Council of an application filed by the enterprise, be allowed a 30-50 per cent reduction of the amount of profits tax payable for a further period of 10 years following the expiration of the period for tax exemption or reduction as provided for in the preceding two paragraphs.

Any foreign investor of an enterprise with foreign investment which reinvests its share of profit obtained from the enterprise directly into that enterprise by increasing its registered capital, or by making the profit as capital investment to establish other enterprises with foreign investment to operate for a period of not less than five years shall, upon approval by the tax authorities of an application filed by the investor, be refunded 40 per cent of the profits tax already paid on the reinvested amount. Where other preferential provisions are provided by the State Council, such provisions shall apply. If the investor withdraws its reinvestment before the expiration of five years, it shall repay the refunded tax.

3. Remittance tax

A ten-per cent tax is levied on the portion of profit that is remitted abroad by foreign investors. The part of profit not sent abroad is not taxed. If a foreign investor remits abroad all his profit, he only pays 18.9 per cent combined income tax and remittance tax.

4. Customs duty

Imported machines and equipment as part of investment or supplementary investment in a joint venture are exempted from customs duty. Raw materials, spare parts and components imported by the joint ventures to be used in production may be exempted from import duties.

Key instruments and equipment of proprietary technology imported by small and medium-sized enterprises for upgrading production are exempted from customs duty.

Advanced and suitable machinery and equipment that China cannot produce or supply is allowed 50 per cent deduction of customs duty.

A ten-per cent reduction of income tax is granted for fees obtained by foreign businessmen for providing proprietary technology in agriculture, animal husbandry, scientific research, energy, communications and transport. Foreign investors are also exempted from income tax if they supply advanced technology with favourable conditions.

Export products produced by the joint venture (except those products, the export of which are forbidden by the State) are exempted from export duties.

E. OTHER MATTERS OF INTEREST TO FOREIGN INVESTORS

1. Form of Chinese investment

China's essential aim in absorbing foreign investment is to make use of foreign funds and to introduce advanced technology and equipment to develop its economy. So the Chinese side prefers to contribute its investment in the form of buildings, labour force and land-use rights. Now, most of the established Sino-foreign joint ventures have taken the form that foreign parties invest financial resources or advanced technology and equipment or provide foreign market, while the Chinese parties invest in the form of land, buildings, labour, machines or part of capital fund.

2. Export and domestic sales of products

The Chinese side requires that the bulk of the products of a joint venture be exported. The apportioned export products of a joint venture may be marketed by the joint venture itself or by the marketing agency of the foreign participant or by a Chinese foreign trade corporation on a consignment or agency basis. The products allocated for domestic sales, as provided in the mutually agreed documents, should be sold on contract to end-users through the managing department of materials, and the prices for them should be determined in accordance with China's State price policy.

Sales quotas for products from Sino-foreign joint ventures on the domestic market are fixed according to the technology level provided by the foreign investor and the product itself. If the technology is extremely advanced and can give great impetus to domestic production, or the products are on the priority imports list and are competitive on the international market, the venture's product can be marketed totally in China.

The duration of a joint venture can be extended to more than 30 years if the venture requires large investment, long construction period and low interest rates.

3. Foreign exchange control

China practices a centralized system of control over foreign exchange. All receipts of a joint venture in foreign currencies must be deposited with the Bank of China or other banks approved by the latter. All payments in foreign currencies by the joint venture have to be made through its account with the Bank of China or approved banks. Settlements of accounts between a joint venture and an enterprise or individual in China should, as a rule, be made in yuan renminbi, except in cases where settlement in another currency has been agreed to by both parties and approved by the General Administration for Exchange Control.

A foreign participant in a joint venture is permitted to draw his after-tax profits and other lawful incomes from the joint venture's foreign currency bank account and repatriate them upon application to the bank at which the account is kept. When a joint venture expires or terminates, the capital and lawful incomes of the foreign participant can be transferred out of China in accordance with the joint-venture contract upon prior application to the Bank of China in accordance with the Provisional Regulations for Exchange Control.

4. Land, buildings and fees for using a site

China has not worked out fixed and unified fee rates for the use of sites in different parts of the country. The fees for using a site are determined by the local government variously with respect to its geographical position, environment and infrastructure. A joint venture has the right only to use a site, but has no right to own, transfer, sell, mortgage or use it for other purposes.

Buildings, machinery and equipment are evaluated jointly by the participants in the venture with reference to world prices and through negotiation or by a third party. The buildings and capital goods of an existing enterprise contributed by the Chinese side should be assessed on the basis of their practical value as realized by the joint venture, with the addition of the average profit of the previous three years of the existing enterprise.

5. Duration of a joint venture

The term of operation of equity joint ventures may be agreed upon differently according to different lines of business and different circumstances. The term of operation of equity joint ventures engaged in certain lines of business shall be fixed while the term of operation of equity joint ventures engaged in other lines of business may or may not be fixed.

6. Establishment of branches and subsidiaries

A joint venture may set up affiliated agencies outside China on the condition that (a) it is approved by its board of directors; (b) it is approved after proper examination by the competent

Chinese authorities; and (c) its original investment is not transferred out of China. The capital transfer must go through registration procedures of the Chinese Industrial and Commercial Administration Department when additional investment is needed for the setting up of the branches or subsidiaries inside China.

7. Ownership of a joint venture upon its termination

When a joint venture terminates, its assets can be transferred to either partner who wishes to continue operation. The evaluation of assets proceeds according to the provisions laid down in the contract and articles of association. The parties to the venture may choose to distribute the net assets according to the proportions of the original investment. Upon termination of a joint venture, the foreign party can remit its allotted portion of net assets abroad. The remaining property exceeding the registered capital is regarded as profit on which income taxes are levied.

F. OPEN COASTAL CITIES

The Chinese authorities declared their decision in May 1984 to open 14 coastal cities to foreign trade and development.

The 14 port cities are Dalian, Tianjin, Qinhuangdao, Yantai, Qingdao, Lianyungang, Nantong, Shanghai, Ningbo, Wenzhou, Fuzhou, Guangzhou, Zhanjiang and Beihai.

1. Autonomy rights to the open cities

In order to better operate joint ventures, the central authorities have granted much autonomy to the local governments of the 14 open cities. They have the power to:

(a) Examine and approve non-productive projects mainly using foreign investment;

(b) Allocate an area as a new economic and technical development zone;

(c) Approve projects using a certain amount of foreign funds. The 14 open cities are empowered to approve projects each with a total investment at or under $US30 million;

(d) Approve any amount of investment if the project funds are raised by enterprises concerned; and

(e) Assess or waive land use fees as each locality sees fit.

2. Preferential treatment to the 14 cities

A variety of preferential measures have been adopted to assist overseas business investing in the 14 coastal cities. Many of these measures have already been practised in the special economic zones.

It was estimated that by the end of 1992 the number of economic development zones all over the country would increase from 117 approved zones by the end of 1991 to more than 2,000 zones.

Taxes

(a) Enjoying reduced income taxes to 15 per cent as against 33 per cent. The income taxes are exempted in the first two years when the foreign enterprises begin to generate profits, if the cooperation period is over 10 years;

(b) The income taxes are reduced to 10 per cent from the sixth year, in addition to the above-mentioned tax treatment, if the export products of foreign enterprises are worth 70 per cent of their production value.

Customs duties

(a) Import customs duties and industrial and commercial consolidated tax are exempted for imports of office equipment, private vehicles and personal articles for use by foreign personnel;

(b) Customs duties and industrial and commercial consolidated tax are exempted for imported construction and production materials, equipment, machines, components, parts, metres, instruments, fuel, electrical appliances, devices and other materials for their own use or export production;

(c) Export products are free from customs duties and industrial and commercial consolidated tax (with the exception of state-restricted export items.

Remittance tax

(a) Enterprises located in the economic and technical development zones are exempted from profit delivery quotas;

(b) Remittance taxes are not required for normal amounts of profits being sent out of China.

Management

Ventures with foreign investment are able to establish their own finance management system and organize their own budgets and distribution of profits and resources. The management of the venture has the right to hire and fire employees and to determine wage levels.

3. The 14 open-coastal cities

(1) Guangzhou (located in the north margin of Zhujiang Delta)

Area(sq.km)	16,657 *9.6		
Population	3,543,900 (urban)		
Economic situation	Industrial production in 1989		
	Light industry:	17,343.48	(mil. yuan)
	Heavy industry:	8,465.70	(mil. yuan)
	Value of export:	$US 1,054.19	mil.
	Harbour's handling volume:	4,649	(10 thousand tons)
	Investment in capital assets:	6,228.10	(mil. yuan)
	Total value of industrial production:	25,809.18	(mil. yuan)
Utilization of foreign capital	Utilization of foreign capital in 1988		
	Contract number:	2,120	
	Foreign contractual value:	$US 526.5	mil.
	Effected foreign investment:	$US 255.19	mil.
	Number of foreign direct investment:	289	
	Total foreign direct investment:	$US 129.21	mil.
	Utilization of foreign capital in 1989		
	Contract number:	2,121	
	Foreign contractual value:	$US 577.78	mil.
	Effected foreign investment:	$US 298.42	mil.
	Number of foreign direct investment:	292	
	Total foreign direct investment:	$US 134.31	mil.
	Up to the end of 1989		
	Joint ventures:	384	
	Contractual joint ventures:	182	
	Foreign wholly-owned enterprises:	37	
	Total:	603	
	Japanese enterprises:	4	(up to the end of 1988)
Infrastructure	Port:	30 berths, including 16 above 10,000-ton berths, one container berth	
	Power:	yearly supply capacity 4,200 mil. KWH	
	Water:	Daily production capability: 21,100 mil.ton	
	Telecommunication:	well developed telecommunication network, direct domestic and international call	
Labour service charge (Unit: yuan/month)	250-300 (average)		
Other fee	Water:	0.20	yuan/ton
	Electricity:	0.295	yuan/kwh

Priorities	Light industry, foodstuffs, machinery, electronics, textile, rubber, medicine, chemistry, paper, ship-building, metallurgy, building materials
Local preference	The income tax rate on joint venture in economic & technical development zone is 15%. A newly established joint venture can be exempted from income tax in the first two profit-making years, and allowed a 50% reduction of income tax in the third, fourth and fifth years.

	Total:	709	
	Japanese enterprises:	95	

Infrastructure	Port: 113 berths, including 55 above 10,000-ton berths, 4 container berths, harbour length 16 km. long Power: sufficient electric power Water: rich water resources Telecommunication: one of the major centres of China's international and domestic postal and telecommunication services.
Land use fee (Unit: yuan/year.sq.m)	*A* *B* *C* *D* *E* *F* Industry: 60-100 50-90 30-70 15-30 5-20 4-12 Commerce: 60-100 50-90 40-80 30-60 20-30 12-20 Residential commercial building: 50-90 45-80 35-70 20-50 12-30 8-14 Export & technologically-advanced enterprise can be exempted from the land use fee in the first three years, and allowed a 50% reduction in the follow years.
Labour service charge (Unit: yuan/month)	450 (average) 150% of the real wages of state-owned enterprise of the same trade in the locality
Other fee	Water: 0.12 yuan/ton Electricity: 0.058 yuan/kwh
Priorities	Machinery, electronics, textile, light industry chemistry, instruments and meters, building materials, ship-building, automobile, phamaceutical metallurgy, optical fibre communication, biology
Local preference	The income tax rate on joint venture in economic & technical development zone is 15%. A newly established joint venture can be exempted from income tax in the first two profit-making years, and allowed a 50% reduction of income tax in the third, fourth and fifth years. Export & technologically-advanced enterprises can be exempted from local income tax during the period for the exemption for income tax. After the exemption period expires, those enterprises shall be exempted from local income tax for three years, and subject to a reduced rate of 50% for another three years.
Official department in charge	Shanghai Municipal Committee of Foreign Economic Relations and Trade Address: 33, Zhong Shan Road, E.1 Shanghai Telephone: (021) 3232200

Pudong (a part of Shanghai, located at east of Huangpu River).

Opened date for Special Economic Zone (SEZ)	18 April 1990
Area(sq.km)	350
Population	700,000 (new area)
Economic situation	Industry by the end of 1990: 2,500 Industrial enterprises, mainly include petrochemistry, ship-building, iron and steel, construction materials, machinery, textiles and light industries. Industrial output value: 10% of the total of Shanghai. Agricultural output value: 10% of the total of Shanghai.
Infrastructure	Water supply: present capacity is 800,000 tons daily, 4 new water works providing 400,000 tons daily will be constructed to make supply ability to 1.2 million tons daily. Power: sufficient gas and electric power to meet present demand, a new power station with 3.6 million kilowatts circular network will be constructed. Telephone: 20,000 lines of switching capacity. Ports: 4 new berths and dig-in harbour pool will be built in addition to the existing berths, to handle 20-26 million tons annually.
Bonded territories	Foreign business agencies are allowed to carry out trans-shipment trade and import and export for the enterprises in the new area.
Official department in charge	Pudong Development Office under the Shanghai Municipality Governmet.

(3) Wenzhou (located at the south part of Zhejiang Province)

Area(sq.km)	11,784.
Population	557,800 (urban)
Economic situation	Industrial production in 1989 Light industry: 3,095.38 (mil. yuan) Heavy industry: 2,273.53 (mil. yuan) Value of export: $US 2.67 mil. Harbour's handling volume: 430 (10 thousand tons) Investment in capital assets: 428.41 (mil. yuan) Total value of industrial production: 5,368.91 (mil. yuan)
Utilization of foreign capital	Utilization of foreign capital in 1988 Contract number: 14 Foreign contractual value: $US 4.61 mil. Effected foreign investment: $US 1.04 mil. Number of foreign direct investment: 14 Total foreign direct investment: $US 1.04 mil.

G. SPECIAL ECONOMIC ZONES

1. Basic information on the five special economic zones

In 1980, the Chinese Government declared Shenzhen, Zhuhai and Shantou in Guangdong Province and Xiamen in Fujian Province as special economic zones (SEZs), in which special management and preferential treatment for overseas investment are granted. The SEZs are administered by the Provincial Administration of Special Economic Zones (PASEZ) on behalf of the Provincial People's Government. Foreign companies wishing to invest in these zones can apply directly to PASEZ. Foreign enterprises, businessmen in Hong Kong and Macau can apply to set up individual ventures or undertake joint ventures in the field of industry, agriculture, commerce, tourism, housing, etc.

In April 1988, Hainan Island became the 23rd Province and the largest economic zone in China.

2. Preferential treatment

(a) Taxation

Upon authorization by the people's governments of the special zones, enterprises in the five zones can enjoy preferential treatment in tax and customs duties:

(a) At 15 per cent rate of income tax, as against that of 33 per cent levied on ventures outside the zones;

(b) Freedom from certain import and export customs duties: exemptions are applied to machinery, equipment, spare parts, raw materials, fuel, electric appliances, telecommunications, lorries and forklift trucks needed for construction and production. Normal amounts of foodstuffs and other accessories for the tourist industry and catering trades are also included in the exempted list;

(c) Remittance tax free for normal amounts of profits by foreign investors; and

(d) Such goods as cigarettes, liquor and daily consumer goods have a reduced import duty of

50 per cent. There has also been 50 per cent reduction in the normal rate of consolidated industrial and commerce tax.

3. Five special economic zones

(1) Shantou (an important trade port of south China)

Area(sq.km)	52.6		
Population	526,800

H. INVESTMENT PROTECTION

By the end of 1992 agreements on mutual promotion and protection of investment were concluded with 47 countries and regions including the United States, Switzerland, Australia, Thailand, the United Kingdom, Japan etc.

I. PROCEDURES FOR SETTING UP JOINT VENTURES

1. Negotiation steps

Foreign investors who wish to start joint ventures in China may get in touch directly with the relevant Chinese corporations, enterprises or other economic organizations and consultancy corporations. They may also approach the local government authorities or the Ministry of Foreign Trade and Economic Cooperation with their plans for joint venture projects which should cover the following points:

(a) Line of business;

(b) Types of products;

(c) Characteristics of the technology;

(d) Scale of production;

(e) Total amount of investment and source of funds as well as proportion of each party's investment;

(f) Forms of investment and cooperation; and

(g) Ratio of profit distribution and marketing of products.

If the two parties have reached an agreement on the major issues in the proposed joint venture, the Chinese side has to submit a project proposal and feasibility study report to the competent authorities. The proposal and feasibility study report, once examined and approved by the department in charge, is then submitted to the higher authority for final approval.

Upon approval of the proposal and preliminary feasibility study report by the competent authority, the two parties to the venture should re-examine their preliminary feasibility study and conduct further negotiations until a final agreement is reached. On this basis, legal advisers to both parties should proceed to draft the joint venture agreement, contract and articles of association.

2. Documents required

The Chinese side is required to submit to the competent examination and approval authority the following documents:

(a) Application for the establishment of a joint venture;

(b) Feasibility study report jointly prepared by the two sides to the joint venture;

(c) Joint venture agreement, contract and articles of association signed by representatives authorized by the parties to the venture;

(d) Names of candidates for the positions of chairman, vice-chairman and directors nominated by the parties to the venture;

(e) Written statements by the department in charge of the joint venture and the people's government of the province, autonomous region or municipality where the venture is to be located with regard to the establishment of the joint venture.

J. ORGANIZATIONS IN CHARGE OF FOREIGN INVESTMENT AFFAIRS

1. Ministry of Foreign Trade and Economic Cooperation (MOFTEC)

The Ministry of Foreign Trade and Economic Cooperation in addition to other economic and trade fairs, also takes charge of foreign investments in China. It has the authority to draw up investment policy, guidelines, regulations and rules and to direct and coordinate the foreign investment projects of the country.

It participates in the examination and approval of applications for setting up large overseas investment projects. The Ministry is also responsible for the introduction of advanced technology and equipment.

2. China International Trust and Investment Corporation (CITIC)

CITIC was established on 8 July 1979. The Corporation is a state-owned enterprise operating directly under the leadership of the State Council. The Corporation is authorized to utilize foreign capital, handle investments in trust, and bring in advanced technology and up-to-date equipment to speed up the modernization of the country's national construction.

3. State Administration for Industry and Commerce (SAIC)

In addition to the responsibility for the business activities of the domestic industrial and commercial enterprise, SAIC takes charge of the registration of foreign ventures of all forms and the registration of foreign trademarks. Ventures of all forms are required to apply to SAIC or its local Administration for registration with relevant documents with required time.

4. Organizations under local governments

Local governments of provinces, municipalities and autonomous regions have set up their own departments to administer foreign investment projects and joint ventures under their jurisdiction. These departments are administratively under the leadership of local governments and are all directed by the Ministry of Foreign Trade and Economic Cooperation.

Local governments may, in view of local conditions, examine and approve foreign countries and compensation trade of small- and medium-sized (one below a certain limit specified by the State) but the overall arrangement of these projects should not affect the national plan. Some small-sized joint ventures with Chinese and foreign investment may also be approved by the local governments with the authorization of the Ministry of Foreign Trade and Economic Cooperation.

Table 1. Utilization of foreign direct investment from 13 major countries and regions during 1979-1991

XII. TRADEMARK REGISTRATION, ARBITRATION, AVERAGE ADJUSTMENT AND THE PATENT SYSTEM

A. TRADEMARKS

1. Law on trademarks and recent developments

In 1963, the State Council of the People's Republic of China formally promulgated its first trademark law "Regulations Governing Trademarks". This law, in its 20-year application, has approved inadequate legal protection for registered trademarks. The Chinese Government joined the World Intellectual Property Law in 1980 and enacted Trademark Law in 1983.

The new law brings China's trademark system into closer conformity with the common international trademark practices. Since then China's efforts to protect trademarks have developed and the number of foreign and domestic trademark applications have grown each year. In 1990, the country's industrial enterprises applied for 57,272 trademark registrations, including 6,419 foreigh trademark applications. Between 1950 and 1979, China had only 32,000 approved registered trademarks but, by the end of 1990, the figure had reached 279,387. Before the 1980s, only 18 countries and regions registered 5,130 trademarks in China. By the end of 1990, however, foreign businessmen from 62 countries and regions registered 42,097 trademarks in China. The United States which only registered 122 trademarks in China before the 1980s registered 12,528 trademarks in the country by 1990, a rise of more than 100 times.

By the end of 1991, China had concluded agreements on reciprocal registration of trademarks with over 35 countries.

The Chinese authorities have been making efforts to bring their legal economic activities in conformity with international laws. In 1986, China joined the Agreement concerning the International Registration Trademark. Years of efforts have been made to amend China's "Trademark Law" and the "Patent Law", which are expected to go into force at the beginning of 1993. The Chinese authorities are confident that the revised trademark law can protect the right of trademark holders and encourage more applications.

2. Institutions in charge of trademark affairs

The State Administration for Industry and Commerce (SAIC) under the State Council is the competent authority for the registration and administrative control of trademarks for the whole country. Domestically, trademark application, since 1990, is handled by 6-appointed trademark agents located in Hubei, Shanghai, Shenyang, Nanjing, Chengdu and Changzhou. These 6 agencies are strictly selected and equipped with qualified experts. SAIC has also set up trademark business offices in Jiangsu, Fujian, Guangdong, Sichuan, Guangzhou, Chongqing, Changchun and Zhuhai to take charge of *domestic* trademark affairs.

Since 1990, other additional four trademark agencies have been appointed to handled trademark applications for foreign companies and enterprises, in addition to the China Council for the Promotion of International Trade. They are:

1. China Trademark Business Office

Address: No. 3, Er Qi Theatre Road, Western District,
Beijing, China, Postal Code: 100045
Telephone: 86-1-8329996 ext. 3302
Facsimile 86-1-8010306
Cable: 81409

2. Trademark Agency Department of China Council for the Promotion of International Trade

Address: No. 1, Fuxingmenwai Street, Western District,
Beijing, China, Post Code: 100860
Telephone: 86-1-8013344 Ext. 1821
Facsimile: 86-1-8010208
Cable: 222853 CTMA CN

3. China Patent Agency (Hong Kong) Co., Ltd.

Address: No. 22, Yingjun Central Building,
No. 23 Gangwam Road, Wanchai, Hong Kong
Telephone: 852-8284688
Facsimile: 852-8271018, 8271172, 8271638
Cable: 76507 CPALD HX

4. Yongxin Patent Trademark Co., Ltd.

Address: No. 103, Yongan Square, Jianshazui Dongbu,
Kowloon, Hong Kong
Telephone: 853-7391818
Facsimile: 853-7213692
Cable: 30431 NTEDL HX

5. Shanghai Patent Office

Address: No. 34-35 Building, No. 2650, Zhongshan Road
North, Shanghai, China, Post Code: 200063
Telephone: 86-21-2571512, 2571965
Facsimile: 86-21-2572047, 2572048
Cable: 33486 SPA CN

3. Applying for trademark protection

In compliance with the principles of Paris Convention, China treats Chinese and foreign trademark applications equally without discrimination. Exclusive rights are granted to those applicants who are the first to register trademark by going through the legal procedures. Any party which raises a challenge to the decision of the Trademark Office may apply for a review of the decision to the Trademark Review and Adjudication Board under the State Administration of Industry and Commerce.

(a) *Choosing trademark*

A trademark should be of distinctive nature and should not be descriptive of the commodity it represents. China does not accept the registration of the mark which relates to the generic names or designs of the commodity it represents, or has direct reference to the quality, main component materials, function, usage, weight, quantity or other features of the commodity. The following words or designs as trademarks are rejected for registration in China:

(a) Those identical with or similar to the State name, national flag, national emblem, military flag or decorations of the People's Republic of China, or foreign countries;

(b) Those identical with or similar to the flags, emblems or names of intergovernmental organizations;

(c) Those identical with or similar to the symbols or names of the Red Cross or the Red Crescent;

(d) Those carrying discrimination against any nationality;

(e) Those carrying exaggerated and deceptive messages; and

(f) Those detrimental to socialist morals or customs, or having other unhealthy influences.

(b) *Classification of commodities*

In China, commodities are classified into 78 categories, excluding computer software. Each application for registration covers commodities in one category only, and the names, uses and main raw materials of all the items must be specified.

An applicant having difficulty in determining the category to which his goods belong may contact the Trademark Agency for assistance.

(c) *Application procedure*

Application forms may be obtained from the Trademark Registration Bureau. The applicant may entrust the Agency with completing the filling of the form. The documents to be submitted are:

(1) a Power of Attorney in duplicate;

(2) an application form in duplicate; and

(3) 15 reproductions of the trademark, of which the length or breadth shall not exceed 10 cm. If colour is claimed, two more in black and white shall be attached to colour reproductions. If the trademark is in plain block letters, no reproductions are required.

Starting from 1 August 1984, when applying for a trademark registration in respect of pharmaceutical products for human beings, the foreign applicant is required to submit the certificate of authorization of manufacture issued by the competent governmental department of his or its home country.

(d) Preliminary approval and public announcement of approval

The Trademark Registration Bureau processes the applications in the sequence of the respective filling dates. If the application is in conformity with the relevant provisions of the trademark Law, it is given preliminary approval for registration and is published in the *Trademark Gazette*. The Trademark Agency subsequently informs the applicant with a written notice and a photocopy of the public announcement.

If the application is not in conformity with the relevant provisions of the Trademark Law or is identical with or similar to another trademark for the same or similar kind of goods which has already been registered or received preliminary approval for registration, the Trademark Registration Bureau refuses the application. No public announcement is made in such a case.

Where there are two or more applications for the registration of identical or similar trademarks in respect of the same or similar goods; preliminary approval shall be granted to the application which has been applied earlier.

(e) Rejection of applications for registration and objections

In the case of an application being rejected, the Trademark Registration Bureau shall notify the Trademark Agency in writing, which will duly pass the notice on to the applicant. If the applicant is dissatisfied, he may appeal to the Trademark Review and Adjudication Board (TRAB) within 15 days of receipt of the notice of rejection. The applicant may, under special circumstances, request postponement of the deadline for appeal. However, at most only two postponements (not exceeding 30 days each) are granted. The TRAB makes a final ruling after reviewing the application.

When making an appeal, one of the following approaches is usually adopted:

(a) Putting forward statements fully supported by all possible grounds for arguments;

(b) Making amendments or deleting the part of the trademark under controversy; or

(c) Restricting the goods concerned.

Neither a disclaimer, that is, the act of disclaiming the exclusive right for the part of the trademark which is in controversy but requesting the retention of the said part in the trademark, nor the issuance of a "letter of consent" as an agreement between the applicant and the registrant of the cited trademark, are considered as acceptable in China under the present circumstances, the applicant for registration is required to submit a counter-statement within a prescribed period on receiving notice of the protest. The Trademark Registration Bureau hears the facts and grounds stated by both parties concerned and after appropriate investigation and verification, makes a ruling. Any dissatisfied party may, under special circumstances, request postponement of the deadline for appeal. The maximum number of postponements is two and each postponement shall not exceed 30 days. TRAB makes the final ruling.

(f) Registration and renewal of registration

If not protest is filed within the prescribed period or if the protest is overruled, formal registration is granted. A trademark registration certificate is issued and a public announcement is made a second time. From then onwards, the registrant of the trademark enjoys exclusive trademark right for 10 years starting from the date of registration. If the registrant wishes to continue to use the registered trademark after the expiration of the validity, an application for renewal of the registration should be made within the six-month period before the said expiry date. An extension period of six months is allowed for applications for renewal; however, extra fees are charged for such deferral.

(g) Proper use and cancellation of a registered trademark

Any registered trademark not in use for three consecutive years may be liable to cancellation of registration. A foreigner or foreign enterprise with a trademark registered in China may, for certain reason, fail to export the goods related to the trademark for three consecutive years.

Since appearance on advertisements or display at exhibitions may be treated as use of the trademark, any foreign registrant of a trademark may entrust the Trademark Agency to advertise the trademark in the various periodicals published by CCPIT or other trademark agencies so as to avoid cancellation of the registration.

Registration may also be canceled on the following grounds:

(a) Where any word, design or their combination on the trademark is altered;

(b) Where the name, address or other registered matters concerning the registrant are changed; or

(c) Where the registered trademark is assigned without prior approval of the Trademark Registration Bureau.

In order to avoid any possible cancellation on the above grounds, the registrant should fill in a new application when he intends to make alterations to the registered trademark. Any change in the name or address of the registrant should also be reported to the Bureau. Approval should be obtained from the Bureau when a registered trademark is transferred.

When making alterations to the name or address of the registrant, a written application in duplicate is required and the original Certificate of Registration should be returned at the same time. Original documents issued by the home country showing the alteration concerned should also be presented in duplicate. Application for an assignment requires a trust deed from the assignee in duplicate and a written application signed by both the assignor and assignee in duplicate. The original Certificate of Registration should also be returned.

(h) Trademark licence

Any trademark registrant may, by signing a trademark licence contract, authorize other persons to use his registered trademark. The licenser supervises the quality of the goods produced by the licensee in respect of which his registered trademark is used, and the licensee guarantees the quality of the goods in respect of which the registered trademark is used.

The trademark licence contract should be filed with the Trademark Registration Bureau. Otherwise, the rights of both the licenser and licensee cannot be properly protected. When filing a license contract, a written application in duplicate, and the duplicate of the contract should be presented.

(i) Trademark disputes and infringement

The registrant should respond to an argument within a period prescribed by TRAB when a protest against the trademark has been filed by another party within one year of its registration. TRAB will make the final ruling as whether to sustain or cancel the registration of the trademark in dispute.

In case of any acts infringing the exclusive right of a registrant, the registrant may request the Trademark Agency to take the following actions:

(a) Issue a warning to the infringing party demanding him to stop the act of infringement and undertake no further infringement;

(b) Request the authority for industry and commerce at or above the level of the country where the infringing party resides to deal with the matter. The administrative authority concerned shall have the power to order the infringing party to stop the act of infringement immediately and to compensate the registrant for any damage caused to him. The amount of compensation should be equivalent to the profit which the infringing party has earned through the act of infringement. Any dissatisfied party may institute a suit with the People's Court.

(c) Institute a suit against the infringing party directly with the People's Court.

The decision on the appropriate action to be taken will be based on the degree of seriousness of the act of infringement, among other factors.

Table 1. Classification of goods for trademark registration

Class 1.	Power generating equipment and electric power station equipment.
Class 2.	Agricultural machinery, farm tools, machines for animal husbandry, component parts and spare parts thereof.
Class 3.	Machines for lumbering, timber-sawing, wood-processing, match-making, paper-making and printing, component parts and spare parts thereof.
Class 4.	Machines for cotton-processing, spinning, weaving, printing, dyeing and chemical-fibre industries, component parts and spare parts thereof.
Class 5.	Machines for food industry, component parts and spare parts thereof.
Class 6.	Machines for tanning, sewing, shoe-making and machines for light industry not included in other classes, component parts and spare parts thereof.
Class 7.	Machines for phamaceutical, rubber, glass, plastic and other chemical industries, component parts and spare parts thereof.
Class 8.	Machines for geological prospecting, mining and metallurgical and petroleum industries and machines for heavy industry not included in other classes, component parts and spare parts thereof.
Class 9.	General machines and machines not included in other classes, component parts and spare parts thereof.
Class 10.	Machine tools, accessories and spare parts thereof.

Table 1. ***(continued)***

Class 11.	Equipment, apparatus, tools and materials for welding.
Class 12.	Grinding tools and supplies.
Class 13.	Cutting tools, measuring and weighing aparatus, industrial hand-tools.
Class 14.	Wire and wireless telegraphic equipment, wireless sets, phonographs, photographical, cinematographical, optical, thermal, testing and surveying apparatus, instruments and suplies.
Class 15.	Electric illuminating installation; electrical apparatus and supplies.
Class 16.	Calculating and sorting devices, office machines and other computing apparatus.
Class 17.	Medical and veterinary apparatus and instruments.
Class 18.	Equipment for heating, cooking, refrigerating, drying, ventilating, water-supply and sanitary purposes.
Class 19.	Aircraft, vessels, vehicles and other means of transportation.
Class 20.	Knives, scissors, pins, needles, tweezers and sharp-edged and pointed implements not included in other classes.
Class 21.	Metals and their manufactures not included in other classes.
Class 22.	Natural and artificial stones, cement, asphalt, asphalted felt, bricks and tiles, fireproof articles and building materials not included in other classes.
Class 23.	Glass, glass products for building, quatrz products, glassware for everyday use.
Class 24.	Petroleum, petroleum products, industrial oils and greases.
Class 25.	Minerals not included in other classes.
Class 26.	Chemicals.
Class 27.	Fertilizers.
Class 28.	Dyestuffs, paints, pigments, distempers, printing inks, glazes.
Class 29.	Rubber, rubber manufactures, asbestos articles.
Class 30.	Natural resin, synthetic resin, plastics, plasticizers and plastic articles not included in other classes.
Class 31.	Medicines.
Class 32.	Medical and sanitary articles.
Class 33.	Meat, eggs, wild game, sea-food and manufactures thereof.
Class 34.	Milk, dairy products and substitutes thereof.
Class 35.	Canned foods.
Class 36.	Beer, wines, spirits and liquors.
Class 37.	Tea, coffee, cocoa, aerated water, fruit juice, ice products and soft drinks not included in other classes.
Class 38.	Sugar, sweets, honey, cakes, confectionery.
Class 39.	Fresh fruits, dried fruits, preserved fruits, jams and other fruit products.
Class 40.	Edible oils, soy sauce, sauces, vinegar, gourmet powder and other condiments.
Class 41.	Preserved vegetables and vegetable products.
Class 42.	Cereal produts and foods not included in other classes.
Class 43.	Tobacco and tobacco manufactures.
Class 44.	Silkworm eggs and cocoons.

Table 1. *(continued)*

Class 45.	Silk, silk wadding, cotton, flax, hemp, jute, feather and imitations thereof.
Class 46.	Yarns and threads.
Class 47.	Cotton piece goods.
Class 48.	Silk piece goods.
Class 49.	Woollen piece goods.
Class 50.	Flax, hemp and jute piece goods.
Class 51.	Ropes, strings, nets, bags, tents, felts, tarpaulin and waterproof articles not included in other classes, harness for horse and mule.
Class 52.	Furs, hides and skins, leather, imitation leather, articles made of leather and imitation leather not included in other classes.
Class 53.	Clothing.
Class 54.	Headwear, shoes.
Class 55.	Socks, stockings, towels, neckwear, gloves, handkerchiefs and hair nets.
Class 56.	Buttons, hairpins, ornaments made of gold, silver and jewels.
Class 57.	Embroidered articles, laces, ribbons, braids, curtains, tablecloths, beddings, carpets and indoor articles not included in other classes.
Class 58.	Furniture, infants' carriages, articles made of bamboo, wood, rattan, palm, straw and grass.
Class 59.	Paper and paper products.
Class 60.	Pens, pencils, brushes for painting or writing, inksticks, inks, oil-colours for painting, advertising and stage purposes.
Class 61.	Copying and printing apparatus.
Class 62.	Drawing instruments and articles, stationery not included in other classes.
Class 63.	Models, speciments, pictures, photographs, cinema films, books, newspapers and periodicals.
class 64.	Articles for cultural entertainment, sport goods and toys.
Class 65.	Musical instruments and accessories thereof.
Class 66.	Clocks, watches, timers.
Class 67.	Daily-use enamelware and aluminum products, porcelains and earthenwares.
Class 68.	Toothpaste, tooth powder.
Class 69.	Cosmetics.
Class 70.	Toilet soap, other soap, detergents and polishing materials.
Class 71.	Tooth-brushes, brushes, combs and other articles for cleaning.
Class 72.	Matches, cigarette lighters and smokers' articles.
Class 73.	Umbrellas, fans, walking-sticks.
Class 74.	Lacquerware, cloisonne, arts and crafts not included in other classes.
Class 75.	Candles, kerosene lamps (lanterns) and illuminating apliances not included in other classes.
Class 76.	Incense and anti-mosquito incense.
Class 77.	Fireworks and crackers.
Class 78.	Goods not included in other classes.

B. ARBITRATION AND AVERAGE ADJUSTMENT IN CHINA

1. Arbitration and arbitration organs

China established the Foreign Trade Arbitration Commission in 1956, now named as "China International Economic and Trade Arbitration Commission (CIETAC)", and the Maritime Arbitration Commission in 1959, named as "China Maritime Arbitration Commission (CMAC)" under CCPIT. CIETAC and CMAC are responsible for dealing with matters relating to foreign trade and maritime disputes.

China has become one of the largest international arbitration centres with increased economic cooperation between China and foreign countries. In recent years, the Sino-foreign disputes and economic disputes between foreign parties are on the rise. In 1991, CIETAC received 274 arbitration cases, more than double the figure in 1987.

The cases involved disputes in contracts, industrial raw materials, processing of raw materials, production assembly lines etc.

China joined the 1958 United Nations Convention on the Recognition and Enforcement of Foreign Arbitral Awards, so foreign parties need not to worry about the efficacy of Chinese arbitration settlements.

2. Activity scope of CIETAC and CMAC

CIETAC deals with cases of disputes arising from:

(a) Joint economic ventures concerning joint-venture enterprises, factories built with foreign capital and Chinese and foreign bank loans;

(b) Contracts or transactions in foreign trade;

(c) Transport, insurance or safe-keeping of merchandise; and

(d) Other business matters in foreign trade.

CMAC administers disputes:

(a) regarding remuneration for salvage services rendered by vessels to each other;

(b) arising from collision between sea-going vessels; and

(c) arising from the chartering of sea-going vessels, agency services rendered to sea-going vessels, carriage by sea by virtue of contracts of affreightment, bills of lading or other shipping documents, as well as maritime insurance.

3. Arbitration agreement

CIETAC and CMAC consider cases of disputes in accordance with the arbitration agreements concluded between the disputing parties either before or after the disputes. The arbitration agreement should be a written document and refer to the arbitration clause stipulated in the original contract or trade agreement, or any other form of agreement to submit disputes to arbitration (such as a special agreement, an exchange of correspondence or any specific stipulation contained in other relevant documents). In order to avoid unnecessary delay, the contracting parties may stipulate where the arbitration is to be conducted. The suggested clauses are "arbitration shall be conducted in China or in the country of domicile of the defendant or in a third country."

4. Average adjustment

The Department for Average Adjustment under CCPIT deals with average adjustment in China. It was set up in 1969. Since its establishment, the Department has handled more than 300 average adjustment cases.

At the request of full insurers or shipowners, the Department undertakes the assessment of particular average for a ship to ascertain the amount to be identified by the insurers to the shipowners in accordance with the relevant clauses of the marine insurance contract, and draws up the adjustment by which settlement is made between the insurers and the shipowners.

C. CHINA'S PATENT SYSTEM

1. Developments

China joined the World Intellectual Property Organization (WIPO) in March 1980, soon after China set up the Patent Bureau. China is now a member of the Coordination Committee, a governing body of WIPO, and has permanent staff members in the International Bureau (the secretariat) of WIPO.

In 1984, China joined the Paris Convention for the Protection of Industrial Property, and in April 1985, the Chinese authorities promulgated the Patent Law, which is intended to provide protection to foreign patents and encourage foreigners to transfer advanced technology to China, as well as to encourage Chinese inventions.

Since the Patent Law went into effect, China received 228,449 applications and granted 92,270 patents by 1991, 10,618 patents of which were granted to foreign applicants.

On 1 June 1991, China enacted its first Copyright Law to go in hand with the Patent Law in protection of creations of human intellectual property. Yet, the provisions of China's patent and Copyright Laws are not fully in conformity with the corresponding international laws, for which patent holders have complains and are reluctant to apply patents and copyrights with China.

China is ready to join Berne Convention for copyrights and the Universal Copyright Convention, and is willing, under the support of the two Organizations, to bridge differences between the international conventions and the Chinese laws, as China is urged and also has recognized the pressing needs to bring its Patent Law and Copyright Law in conformity with the corresponding international ones. At present the Chinese authorities are making efforts to amend the Patent Law and other Laws, which are to come into effect in January 1993. The amended Patent Law would extend protection to chemicals and pharmaceutical from 15 to 20 years, as well as the rights of patents for production processes to include the end products. The revised Patent Law would also entitle patent holders to forbid others to import without having authorization for their patented products or those products obtained directly from their patented production process.

2. Application for patents

China now has 474 patent administration offices employing more than 5,000 agents locating throughout China. These patent administration offices handle domestic applications from local people.

Foreigners or foreign enterprises having no permanent residence or office in China should appoint a patent agency designated by the PRC State Council to act as their agents when applying for patents. At present the Patent Agencies in the China Council for the Promotion of International Trade and the Shanghai Patent Office are the two state-appointed agencies currently in operation.

3. Duties of the agency

The duties of the Patent Agency are as follows:

(a) To provide various consultation services concerning patents and related matters;

(b) As entrusted by any patent applicant, to draft, translate or revise application documents and to file and prosecute the patent application;

(c) As entrusted by any patentee, to attend to its or his patent rights and pay annual fees;

(d) As entrusted by any patentee, to present its or his observations when there is a request that the patent right be declared invalid, and to institute administrative or legal proceedings when the patent right is infringed;

(e) As entrusted by any person opposing a patent application, to file an opposition to that application and as entrusted by any person requesting invalidation of a patent right, to make a request for invalidation of that patent;

(f) As entrusted by any patentee, to proceed with assignment of a patent or with negotiation on the licensing for the exploitation of a patent;

(g) As engaged by any organization, to be its permanent legal counsel;

(h) To administer the patent fund established within the Agency and give assistance to any Chinese unit or individual filing patent application, if necessary; and

(i) To transact any other related matters.

4. How to gain access to Chinese patents and technology

The Chinese patents are composed of patent for invention (with a protection term of 15 years), patent for utility model and patent for design (with a protection term of five years and an extension of three years). All the patents are published in the *Patent Gazette* which is issued periodically by the Chinese Patent Office.

The main applicants include universities, colleges and scientific research institutes and some individuals. And most applications are for patents for utility models.

When a foreigner or foreign company plans to get the Chinese patents and technology, the following ways are advised:

(1) Read the *Patent Gazette* issued by the Chinese Patent Office;

(2) Participating exhibitions for technology and products held in China;

(3) Subscribing to various periodicals, magazines, newspapers and publications for certain specific technology fields;

(4) Establishing business relations with Chinese companies which are authorized to conduct licensing and technology transfer or technology import and export; and

(5) Attending various symposia, seminars or workshops for academic exchange held in China by scientific and technical institutes.

- The *Patent Gazette* issued by the Chinese Patent Office is the only newsletter of its kind in China, published periodically every year, in Chinese language.
- China holds annually several hundreds of exhibitions, including international ones. They provide good opportunities for foreign businessmen to gain access to Chinese technologies and products and to talk to the inventors and patentees.
- There are thousands of special magazines in China, which provide readers with information concerning almost each technical field. They are all in Chinese but have contents in English.
- China has some companies specializing in licensing and technology transfer and trading with foreign companies.
- Chinese associations and institutes hold hundreds of academic meetings annually.

Moreover, foreign businessmen may contact the Chinese Patent Office directly for information concerned.

Although China's technological level is lower than that of developed countries in the West, in some specific fields China possesses world advanced technology. Among the developing countries, China leads in science and technology. The foreign companies may exploit the above channels to acquaint themselves with China's technical level and technologies and patents which can be licensed.

5. How to purchase Chinese technology

The Ministry of Foreign Trade and Economic Cooperation of China stipulates that only the companies which are authorized to conduct technology import and export can do business with their foreign counterparts. Foreign companies which intend to purchase Chinese technology and technical products are advised to contact those companies.

Generally speaking, a Chinese inventor may sell his patented technology to foreign companies in country where he is granted the patent. So it is very helpful to obtain the information concerning the country where Chinese inventors file patent applications. The China Council for the Promotion of International Trade (CCPIT) spends $US 1 million helping Chinese inventors to file their patent applications in other countries. So far, it has filed 75 per cent of the patent applications filed outside China upon entrustment by Chinese inventors. Most of the applications were filed in the United States, Japan, Germany and other developed countries. The China Patent & Technology Trade Ltd. of CCPIT is an important company in China to conduct licensing and technology transfer and can provide clients with all the needed services.

Any foreign company which intends to get licences from China naturally has to negotiate with a Chinese company which is authorized to import and export technology. The Chinese company will represent the Chinese inventors or technology owners to conclude contracts or agreements with the foreign company. When contacting Chinese inventors and technology owners, it is better for a foreign company to entrust Chinese legal and commercial advisers or consultants to do it. It is therefore very important for a foreign company to choose a right Chinese company to help with the signing of the agreements.

In China, patent licence is given usually together with know-how. The business is done in a way quite similar to that for patent licence. However, it is better for foreign businessmen to make sure that the technology to be purchased has been applied to production or remain in the laboratory stage.

6. Models of licences

The Chinese are flexible enough in concluding agreements with foreigners in the license business. They may take the forms of exclusive, sole or non-exclusive licences. So far as the transfer of a patent right is concerned, the patent right may be transferred entirely or partially to foreigners according to the law.

The Chinese way of doing business in this regard is different from the international practice. Some Chinese inventors or technology owners are in favour of the establishment of joint ventures with foreign companies so as to exploit their patents or technology. The Chinese Government encourages foreign investors to set up enterprises in China. Meanwhile, it encourages the export of Chinese technology and the establishment of joint ventures using Chinese technology in other countries.

In the patent license business, the Chinese patentee usually charges the licensee an initial payment plus royalty, which is quite similar to the international practice. But some Chinese will demand a lump-sum payment without royalties when signing the agreement. In the case where the licensing is sole and exclusive, the Chinese licensor will demand the licensee to promise the time and scale for the exploitation. When the patent right or patent application right is to be transferred from a Chinese state-owned company, the transfer needs to be ratified by the state competent department concerned. If it is a patent held by a Chinese individual, the transfer, entirely or partially, shall not be really possible until the transfer is made to public in the *Patent Gazette*.

It should be noted that, according to the Chinese Patent Law, foreigners need entrust a patent agency designated by the State Council to help with the transfer and things relating to the industrial property. There are four such agencies in China: the CCPIT Patent Agency in Beijing, two in Hong Kong and one in Shanghai.

In accordance with the Chinese law, parties involved in the transfer of patent or license agreements concerning patent application rights, patent rights, patent licence or technology transfer should conclude contracts or agreements in written form. So far as the Chinese patent rights are concerned, the technology and know-how transfer or licence is legal only when the contract or agreement is not contrary to the Chinese law.

All Chinese patent applicants (individuals, enterprises or research institutions) face the shortage of hard currency to file their patents in other countries or are not free to file their patents in whatever country they like although their inventions are of great commercial value. Under this situation, the Chinese inventors appreciate the cooperation with foreign companies which can finance their patent applications in other countries. The Chinese applicants shall conclude the patent license agreement with them first and repay them in the form of compensation trade as set in the contract signed by both parties.

To put it in a nutshell, China is willing to transfer its technology to foreigners or reach patent license agreements with foreign companies or transfer patent rights to foreigners. It is ready to establish any form of cooperation in technology exchange with foreign companies or enterprises.

XIII. GENERAL INFORMATION ON TRAVEL TO CHINA

A. TOURISM DEVELOPMENT IN CHINA

Tourism is a relatively new industry in China, since it has begun to develop in 1978. During the past ten years from 1978-1988, China's tourism business grew rapidly about 28.1 million tourists visiting China in 1988.

However China's tourism was seriously affected by the 4th June Event in late 1989 and its business turnover plummeted afterward. Efforts to restore China's tourism brought initial results in 1990. Many statistics show that China's tourism has been on the track. The year 1990 saw increased foreign tourists visiting China.

The country received a record of 6 million tourists from overseas in 1992, earning $US3.6 billion in hard currency, and the number of Chinese tourists travelling within China reached 330 million, accounting for spending of more than 25 billion yuan ($US4.39 billion).

After improving tourism environment, more foreign tourists are attracted to visit China. In 1991 the organized overseas travellers alone totalled 4.7 million with a foreign currency revenue registered at $US 2.7 billion. According to the National Tourism Administration (NTA), during the 8th Five-Year Plan period from 1991-1995, China plans to receive 25 million tourists, or 33 per cent more than last five-year period. the tourism income is expected to reach $US 15 billion, or a 55 per cent increase over the proceeding five-year period. The statistics from the world tourist organization show that China ranks the tenth in number of tourists, accounting for 7 per cent of the world total tourists. Yet China ranks below twentieth in foreign exchange income from tourism, accounting for only 1 per cent of the world total.

China has favourable conditions for promoting further its tourism industry. First, China has first class tourist recourse, and its unique charms are of a great attraction. Second, a tourism environment has been created thanks to the open-door and reform policies adopted 11 years ago. Third, China has achieved initial results and experience and built up its reputation. Basic facilities for developing tourism industry are and have been improved greatly in recent years. These combined conditions enable China to attract more and more foreign travellers.

To achieve the goal set by the Chinese authority during its 8th Five-Year Plan, the National Tourism Administration, responsible for nationwide tourism development, has taken the following measures:

- Reorganizing tourist agencies to standardize and improve tourist management. By reorganizing, tourist agencies are classified. Some are upgraded, some are degraded, and others are merged into first or second-class ones. Those that are unqualified are dissolved.

- Improving hotel management and service. NTA has worked out standards for hotels of three stars or above. Various provincial tourist bureaus are required to issue economic indexes for travel agencies concerning matters such as income, expenditure, profits, fixed assets and debts and service quality.

- Improving transportation facilities and services. Tourist routes are divided into three kinds: national, special and local-level tourist routes. National-level tourist routes are the cream of China's tourist routes. They are selected by provincial tourist bureaus and approved by the National Tourism Administration. They are convenient in transportation and accommodation. So they enable tourists to see the most striking scenic wonders in a relatively short period of time. And the National Tourism Administration sees to the unified publicity of these routes. Local-level routes are those with adequate transportation and accommodation condition as well as strong local and special flavour. The provincial tourist bureaus see to the publicity of the local-level routes as well as local scenic spots that belong to the national-level routes. Special routes are those with special and exclusive tourist services. In addition to scenic wonders at national and provincial levels, tourists on these routes will be specially arranged to spend honeymoon, studies and other special purpose trips in China.

- Sponsoring the "China Friendship Tourist Year" to attract more tourists. During the friendship tourist year, various kinds of interesting activities and shows are arranged.

B. HOTEL AND TRANSPORTATION FACILITIES

China by now has nearly 1,800 tourist hotels with about 300,000 rooms, and hotels in most tourist cities are of very high quality. Along the coast cities several of the hotels are the joint venture hotels with very good facilities. China's hotel facilities and services have been improved and many of them have been upgraded to international standard. Now more hotels are under construction. Therefore, foreign tourist will no longer find it difficult to get accommodation in China and feel comfortable staying at hotels.

Since 1989, China's air ways has greatly increased with additional 45 jumbo passenger planes put into operation, increasing 30 per cent transport capacity over 1988. A number of new airports have been built or expanded and 23 new international and domestic air routes are opened. Now Civil Aviation Administration of China operates 46 international air routes leading to 38 cities in 28 countries and regions. There are 326 domestic air routes which connect 80 major cities. Moreover, many cities in the inland have started direct passenger flights or chartered flight services to Hong Kong.

Travelling by train in China is very pleasant. China has 1,100 luxury trains in service and 14 short-distance trains. China's railway system is well developed and has trains connecting all tourist areas and spots. Fare for railway transportation is very cheap.

C. INFORMATION FOR TRAVEL TO CHINA

1. Visas

Visas for individual travel in China are easy to get. China will even issue visas to individuals from countries which do not have diplomatic relations with the People's Republic. However, citizens of South Africa can only visit China on an organized tour and must apply at least one month before their planned arrival in China.

Visas are readily available in Hong Kong and from Chinese embassies in most western and many other countries. If the travellers cannot wait until they get to Hong Kong or if they want to fly directly to China, they should enquire first at the nearest Chinese embassy.

In Hong Kong numerous travel agencies issue Chinese visas. Generally they offer a choice of visa by itself, or a package deal including visa and transport to China. Some of the best agencies are:

- Visa Office of the Ministry of Foreign Affairs of the PRC, 5th Floor, Low Block, China Resources Building, 26 Harbour Road, Wanchai, Hong Kong (Tel. 8939812). It is open from Monday to Friday, 9.00 a.m. to 12.30 p.m. and 2.00-5.00 p.m., Saturday, 9.00 a.m. to 12.30 p.m. This place has been dispensing the cheapest visas around like a three-month visa issued within two days for $HK 90.
- Traveller Services (Tel. 3674127), Room 704, Metropole Building, 57 Peking Road, Tsimshatsui, Kowloon, Hong Kong. They give a fast, reliable and cheap service.
- Phoenix Services (Tel. 7227378), Room B, 6th Floor, Milton Mansion, 96 Nathan Road, Tsimshatsui, Kowloon, Hong Kong.
- Wallem Travel (Tel. 5286514), 46th Floor, Hopewell Centre, 183 Queen's Road East, Wanchai, Hong Kong.

Visa applications require two passport-sized are photos.

Overseas Chinese holding Chinese passports are permitted to visit China without an entry visa.

2. Main travel service organizations

Unlike other countries, tourism business in China is only operated by the institutions designated by the State. At present the following major organizations are permitted to do tourist business.

(a) China International Travel Service

The China International Travel Service (CITS) or Luxingshe is a key tourist enterprise under the National Tourism Administration. Being established in 1954, it now employs almost 800 staff members. It is staffed by well-trained personnel in the international tourist business and served by competent tourist guides speaking many foreign languages. The China International Travel Service has business links with over 600 travel services scattered in more than 100 countries and regions around the globe. It played host to around two million foreign tourists over the last 11 years, during which its foreign exchange earnings reached a total of $US 1,200 million.

Head Office:	103 Fuxingmen Wei Street, Xicheng District
Tel.:	86-1-6011122
Telex:	22350 CITSH CN
Fax:	86-1-6012013
Post code:	100800
TTDC:	T0001

CITS has a few overseas offices. The following are their addresses and telephone numbers in Hong Kong and the United States:

Hong Kong:
6th Floor, Tower II, South Seas Centre
Tsimshatsui East, Kowloon
(Tel. 7215317, Cable: 2320 Hong Kong, Telex: 38449 CITC HX)

The United States:
60E 42nd Street, Suite 465, New York, NY 10165
(Tel. 212-8670217)

(b) *China Travel Service*

The China Travel Service is the earliest and biggest tourist business concern set up on the mainland after the founding of the People's Republic of China. Employing 33,000 people, this travel service boasts 320 branches in China and overseas. It runs more than 170 tourist hotels and taxi companies with a total of 2,400 cars. It also operates travel goods store and 64 duty-free shops.

The China Travel Service is responsible for the reception of overseas Chinese, foreign nationals of Chinese ancestry and Chinese compatriots from Hong Kong, Macau and Taiwan (Province of China).

The following are the addresses of the China Travel Service in Beijing and foreign countries:

Australia

Level 2, 724-728 George Street, Sydney, NSW 2000 (Tel. (02) 2112633, Fax: 2813595)

Canada

P.O. Box 17, Main Floor, 999 West Hastings Street, Vancouver, BC V6C2W2 (Tel. (604) 6848787, Fax: 6843321)

France

10 Rue de Rome, 75008, Paris (Tel. (1) 45229272, Fax: 45229279)

Hong Kong

Central Branch, 2nd Floor, China Travel Building, 77 Queen's Road, Central (Tel. 8533533, Fax: 5419777)

Kowloon Branch, 1st Floor, Alpha House, 27-33 Nathan Road, Tsimshatsui (Tel. 7211331, Fax: 7217757)

Japan

Nihombashi-Settsu Building, 2-2-4, Nihombashi, Chuo-Ku, Tokyo (Tel. (03) 2735512, Fax: 2732667)

Macau

Hotel Beverly Plaza, Avenida do Dr Rodrigo Rodrigues (Tel. 388922)

Philippines

489 San Fernando Street, Binond, Manila (Tel. 407474, Fax: 407834)

Singapore

Ground Floor, SIA Building, 77 Robinson Road, Singapore (Tel. 2240550, Fax: 2245009)

Thailand

China Travel Service (Thailand) Co., Ltd., 559 Yaowaraj Road, Sampuntawong, Bangkok 10110 (Tel. 662-2260041 (12 lines); Fax: 662-2264712, 2264713; Telex: 84470 CTSTHAI TH)

United Kingdom

24 Cambridge Circus, London WC2H 8HD (Tel. (071) 836911, Fax: (071) 8363121)

United States of America

2nd Floor, 212 Sutter Street, San Francisco, CA 94108 (Tel. (415) 3986627l; Fax: (415) 3986669)

Los Angeles Branch, Suite 138, 2223E, Garvey Avenue, Monterey Park, CA 91754 (Tel. (818) 2888222; Fax: (818) 2883464)

(c) Overseas Chinese Travel Service

The Overseas Chinese Travel Service is responsible for the reception of overseas Chinese. It takes care of hotel reservations, ticket-booking, transportation etc. It also helps overseas Chinese visitors to arrange visits to their relatives in China, if required.

(d) China Youth Travel Service

The China Youth Travel Service was founded in 1980 and has become a big concern operating stores, restaurants, hotels and taxi companies. It has 46 branches on the mainland and established officers in Japan and Hong Kong as well as business links with 200 travel services and friendly groups in 40 countries.

Head Office:	B23 Dong Jiao Min Xiang, Beijing
Tel.:	86-1-301-6688-3051
Telex:	20024 CYTS CN
Telex:	86-1-512-0571
Cable:	6073
Post Code:	100006
TTDC:	T0003

(e) *China Goodwill Travel Service*

Head Office: 1 Building No. 2 and No. 3
Bai Shi Qiao Road
Hai Dian District
Beijing
Post Code: 100873
Tel.: 86-1-8499139
Fax: 86-1-8498388
Telex: 222869 CGTS CN

(f) *China Peace International Tourism Corporation*

Head Office: 8 Yabao Road, Chao Yang District
Post Code: 100020
Tel.: 86-1-5122504
Fax: 86-1-5125860, 86-1-5125864
Telex: 222869 CGTS CN

3. Other information for visitors

(a) *Climate*

China, consisting of approximately 9.7 million square kilometres, has considerable variation in climate conditions among regions within the same season. Autumn – the weather during the day in the north is warm and dry, the evening being pleasantly crisp. The weather in the middle and lower Yangtze Plains is slightly warmer but free of high humidity, while the weather in the lower southern areas is warmer but comfortable with a reasonable level of humidity. Winter – North China is very cold because of the dry, cold continental winds from the north-west. Summer – The monsoons from the south and south-east bring warm and humid weather. The middle and lower Yangtze Plains are very hot and humid.

Average temperature (℃)	*Beijing*	*Xi'an*	*Nanjing*	*Shanghai*	*Guilin*	*Xiamen*	*Guangzhou*
Jan – Feb	-4°	0°	2°	4°	8°	12°	14°
Mar – Apr	9°	11°	11°	11°	16°	17°	20°
May – Jun	22°	22°	22°	21°	24°	24°	26°
Jul – Aug	25°	26°	28°	28°	28°	28°	28°
Sep – Oct	16°	16°	20°	21°	23°	25°	25°
Nov – Dec	0°	3°	7°	9°	12°	17°	17°

(b) *What to wear*

Casual dress is appropriate of all times. Women should avoid wearing anything revealing. Since a lot of walking is required during sighting, a comfortable pair of soft-soled shoes is recommended. A pair of Chinese cloth shoes are comfortable and inexpensive.

South China – in the winter months, a sweater is handy, especially during the evening. In the rainy season (April-June), an umbrella is essential.

North China – winter (late November to March), warm garments, sweaters and top coats in addition to warm boots and fur hats are recommended. Most hotels and other public buildings are heated. Spring (March to mid-May), warm sweater or jacket, light-weight suits and dresses plus an umbrella. Summer (June to August), light, cotton clothing is recommended. Autumn (September to early November) – dress as in Spring.

(c) Local time

Beijing standard time is observed throughout the country and there is no time difference between Hong Kong.

(d) Food and beverage

Flasks of cold boiled water and hot water are available in the hotel room. It is advisable to drink these instead of tap water. Most brands of local beer are of good quality and inexpensive. There is a limited range of soft drinks, mainly lemonade, orange juice and local cola. Coffee is served in the main hotels. If the tourists cannot do without their normal cups of tea or coffee, it is best to bring along their own supply. All meals are included during their tour within China. They will have a good taste of China's food. Visitors also could expect to find western-style gourmet dining rooms in the main hotels. For special food requirements, please advise the local guide so that arrangements can be made.

(e) Currency

Upon entry into China, the tourists should have in their possession a declaration of foreign currencies and travellers cheques. There is no limit to the amount of foreign currencies and travellers cheques brought into China. Each time in exchanging any currency, the tourists should show their copy of the declaration form and at the same time, ensure that an exchange receipt is collected. The Chinese currency is Renminbi and the standard unit is Yuan, which is divided into 10 jiao, and each jiao is worth 10 fen.

For the first time since 1949 both Chinese and foreigners will be allowed to take Renminbi (RMB) – Chinese state currenty – into or out of the mainland beginning in March 1993.

Usually the "Foreign Exchange Certificate" is to be used for the travellers from abroad.

(f) Customs

On entry into China, a customs declaration form has to be filled-in with full details. It is important to list everything as they are checked on departure.

(g) Electricity

Battery-operator razors will save the trouble of finding the right type of electrical plug as these can vary from one city to another. The power supply is 200-220 volts, and three-prong (flat) plugs are normally used.

(h) Overseas communications

There are facilities in tourist hotels for mailing letters, sending telegrams and making overseas telephone calls. Chinese stamps are available at the hotel's post office. Overseas telephone calls may be made from the hotel room, but it must be booked at the front desk or through the operator in some hotels without IDD service.

(i) Travel by train

Train fares are related to distance travelled, so it is possible to estimate the fare the travellers would expect to pay for any particular journey if they know the distance. See the distance tables below.

Table 1. Distances by rail (km) – major cities

Beijing	Bei										
Shanghai	1462	Shan									
Canton	2313	1811	Can								
Changsha	1587	1187	726	Chan

(j) Travel by air

CAAC – Civil Aviation Administrative of China - is China's domestic and international carrier. Its flights cover about 80 cities and towns throughout the country. For details of international flights, see the Getting There & Away chapter.

Timetables – CAAC publishes a combined international and domestic timetable in both English and Chinese in April and November each year. These can be bought from most CAAC offices in China and Hong Kong (Ground Floor, Gloucester Tower, des Voeux Road, Central District, Hong Kong, Tel. 5216416). The timetable could also serve as a useful phrasebook of Chinese place names, but it is filled with misspellings.

XIV. BASIC INFORMATION ON VARIOUS PROVINCES, AUTONOMOUS REGIONS AND MUNICIPALITIES DIRECTLY UNDER THE CENTRAL GOVERNMENT (30)

Beijing Municipality, Tianjin Municipality, Hebei Province, Shanxi Province, Inner Mongolia Autonomous Region, Liaoning Province, Jilin Province, Heilongjiang Province, Shanghai Municipality, Jiangsu Province, Zhejiang Province, Anhui Province, Fujian Province, Jiangxi Province, Shandong Province, Henan Province, Hubei Province, Hunan Province, Guangdong Province, Guangxi Zhuang Autonomous Region, Hainan Province, Sichuan Province, Guizhou Province, Yunnan Province, Tibet Autonomous Region, Shaanxi Province, Gansu Province, Qinghai Province, Ningxia Hui Autonomous Region and Xinjiang Uygur Autonomous Region except Taiwan Province.

1. ANHUI PROVINCE

Situated on the lower reaches of the Yangtze River, Anhui Province is a producer of rice, rapeseed, cotton, tobacco, hemp, tea and silk; and it has deposits of coal, iron, copper and other minerals. The Yangtze flows through the province, and on it are the river ports of Anqing and Wuhu that are open to foreign investment and trade.

Provincial capital:	Hefei
Total Area:	139,000 sq km
Population:	54,600,000 at year-end in 1989

Foreign trade

The total export and import volume of Anhui Province in 1990 amounted to $US 740 million, an increase of 5.7 per cent over $US 700 million in 1989.

The total purchase and purchase on commission basis of commodities for export went up to RMB 3.61 billion yuan, an increase of 10.1 per cent against RMB 3.28 billion yuan in 1989.

The export of the year totalled $US 654 million, an increase of 14.7 per cent against $US 570 million in 1989. The export took up 5.3 per cent of the provincial GNP of RMB 58.8 billion yuan, accounting for 1.3 per cent of the national export.

Export commodities were classified as agricultural, light industrial and heavy industrial products. The export of agricultural and sideline products amounted to $US 160 million, making up 24.5 per cent of the total export; that of the light industrial products was $US 326 million, 49.8 per cent of the total; that of the heavy industrial products was $US 168 million, 25.7 per cent of the total. As compared with the figures of 1989, the agricultural exports dropped by 2.1 percentage points, the light industrial exports dropped by 1.2 percentage points, and the heavy industrial exports rose by 3.4 percentage points. As classified according to international trade standards, the primary products valued at $US 303 million, making up 46.3 per cent of the total export value; the industrial finished products valued at $US 351 million, accounting for 53.7 per cent of the total. As compared with the figures of 1989, the value of primary products, dropped by 2.1 percentage points while the finished products rose by 2.1 percentage points.

There are 810 export commodities. In them, 14 commodities of each exceeding $US 10 million were frozen pork, canned food, bean cake, tea, feather, filature silk, cotton yarn, cotton cloth, singlets and vests, silk cloth, garments, steel products, coal, petroleum products. The total value of the 14 commodities reached $US 281 million. 13 commodities of each valued between $US 5 million and 10 million were rice, sesame seed, honey, dried sweet potato, cotton-seed cake, rape seed cake, rabbit hair yarn, down quilts, synthetic fibre yarn, synthetic fibre cloth, bath towels, black-and-white TVs and motors. The total value of the 13 commodities was $US 85 million. Putting the above 27 commodities together, the total value was $US 366 million, making up 56 per cent of the export.

These exports were sold to 114 countries and regions: 27.1 per cent valued at $US 177 million to Hong Kong and Macau; 17.6 per cent at $US 115 million to Japan; 14.4 per cent at $US 94 million to European Community; and 7.8 per cent at $US 51 million to the United States and Canada.

The total import of the year was $US 83 million, 37 per cent less than $US 131 million in 1989, in which, technological equipment took up 24.1 per cent at $US 20 million; industrial raw materials took up 51.8 per cent at $US 43 million; commodities for agricultural production took up 10.8 per cent at $US 9 million; market commodities took up 13.3 per cent [illegible] $US 11 million. As compared with those of 1989, the import of technological equipment dropped by 10.3 percentage points; industrial raw materials dropped by 5.3 percentage points, commodities for agricultural production rose by 9.6 percentage points and market commodities rose by 72 percentage points.

The major imports were: $US 21 million from Japan, accounting for 25.3 per cent of the total; $US 17 million from European Community, making up 20.5 per cent; $US 15 million from Hong Kong, making up 18.1 per cent; $US 8 million from the United States and Canada, making up 9.6 per cent; $US 8 million from Australia, making up 9.6 per cent; $US 4 million from the former Soviet Union and Eastern European countries, making up 4.8 per cent of the total.

Utilization of foreign capital

70 contracts were approved for the utilization foreign capital, with a contracted foreign capital value of $US 87.21 million, up 64.9 per cent over $US 52.89 million in 1989. 10 contracts were on foreign loans, involving $US 66.67 million; 53 contracts on direct investment, with a capital value of $US 9.2 million; 7 contracts on other foreign investment, involving $US 1.34 million. The actual value of utilization of foreign capital in the year was $US 50.27 million, a drop of 39.2 per cent as compared with $US 82.65 million in 1989. In the utilization of foreign capital, foreign loans were $US 36.73 million, foreign direct investment was $US 9.61 million, other foreign investment was $US 3.93 million.

Among the 53 projects on foreign direct investment, there were 46 equity joint ventures with a contract foreign capital value of $US 16.89 million; 1 contractual joint venture involving $US 50,000; and 6 wholly foreign-owned enterprises involving $US 2.26 million. These investment projects were all productive enterprises, covering 10 sectors, such as textile, machinery, electronics, agriculture and communication. The foreign capital came from Switzerland, Australia, Italy, the United Kingdom, Canada, the United States, Japan, Hong Kong and Taiwan Province. The value of exports, including exports on commission basis, from operating enterprises with foreign investment amounted to $US 14.18 million, an increase of 89.1 per cent against $US 7.5 million of 1989.

Technology import and export

81 contracts were singed on import of technology and equipment with a contract value of $US 33.69 million, an increase of 33 per cent against $US 25.34 million in 1989. The imported projects mainly covered the fields of light industry, textile, machinery, chemistry and electronics, which came from the United States Japan and European Community, etc.

37 contracts were signed on export of technology, in a value of $US 17.81 million, an increase of 1.5 times against $US 7.11 million in 1989. The export projects included electronic dust removal technology and equipment for electrical furnace, establishment of pottery and porcelain plant, plastic plants, technical service for the construction of cement plants and island planning, transfer of Chinese medicine technology, cooperative development of computer software. The market of technology export had been expanded to 23 countries and regions, such as the United States, Germany, France, the United Kingdom and Japan, etc.

Foreign economic cooperation

16 contracts for undertaking overseas contracted projects and labour service were singed with a contracted value of $US 30.42 million, an increase of 66.3 per cent against $US 18.29 million in 1989; a turnover of $US 6.34 million was achieved, an increase of 7.3 per cent against $US 5.91 million in 1989; at the end of 1990, there were 213 personnel working abroad. The main contracted projects were: the construction of the Sri Lanka Pilot Plant for Manufacture and Popularization of Rice-based Products, the design of a dam in Iran, the construction of the Population and Health Centre in Burundi and the Expansion of the Bujumbura Textile Factory in Burundi, etc. The main projects of labour service cooperation were: provision of cooks on Chinese dishes to Finland, Tunisia and Sri Lanka; provision of engineers and agronomists to factories and farm in the United States, Germany, Tunisia and Nigeria.

2. BEIJING

Beijing, capital of the People's Republic of China is situated in the northern part of the North China Plain. It is a city directly under the jurisdiction of the Central Government and the political and cultural center of the country. This ancient city has grown into one of the nation's biggest manufacturing centers in the decades after the inception of the People's Republic. Greater Beijing spreads over an area of 16,807.8 sq km and has a population of 10,211,000 at year-end in 1989.

Foreign trade

In 1990, the export and import value of Beijing totalled $US 1.74720 billion, decreased by 1.34 per cent over $US 1.77094 billion in 1989.

The value of purchase for foreign trade was RMB 5.587 billion yuan, an increase of 13.97 per cent over RMB 4.902 billion yuan in 1989.

The total export value amounted to $US 1.32290 billion, an increase of 13.89 per cent over $US 1.16157 billion in 1989, and accounted for 12.76 per cent of the municipal GNP. It also accounted for 2.54 per cent of the nation's export value, ranking No. 10 in the country.

There were 44 items of commodities each with export value exceeding $US 5 million, and their combined value was $US 670.77 million, accounting for 50.70 per cent of the total. Among them were 21 items of commodities each with export value exceeding $US 10 million, including cotton cloth, cotton-polyester blended fabrics, singlet and vests, sweaters and trousers, woollen sweaters, acrylic sweaters, cotton garments, chemical fibre garments, woollen garments, down products, carpets, radio cassette recorders, colour TV sets, enamel, limitation antiques, gold ornaments, steel products, coal, coke, automobiles and tools. These commodities were exported to 125 countries and regions. The total import value amounted to $US 424.30 million, a decrease of 30.37 per cent over $US 609.37 million.

The import structure was as follows: means of production with the value of $US 386.8 million, accounting for 91.16 per cent of the total; means of livelihood $US 37.50 million, 8.84 per cent. Classified by international trade standard, primary products were valued at $US 80.88 million, accounting for 19.06 per cent of the total; industrial manufactured products $US 343.42 million, 80.94 per cent.

The major imports were: various fabrics, valued at $US 48.76 million, machinery and spare parts $US 34.91 million, wool $US 33.81 million, gold $US 31.19 million, non-ferrous metals $US 11.98 million, chemical fertilizer $US 11.30 million, silk $US 10.69 million, steel products $US 10.32 million, synthetic fibre $US 8.01 million, and building and decorating materials $US 5.13 million. The total value of these products was $US 206.10 million, accounting for 48.57 per cent of the total.

The commodities were imported from 35 countries and regions.

Utilization of foreign capital

283 contracts on utilization foreign capital were signed and approved with the contract value of $US 234.94 million, an increase of 22.05 per cent over $US 192.495 million in 1989. Among these contracts, 33 were of foreign loans amounting to $US 116.90 million; 241 were of foreign direct investment $US 116.88 million and 9 were of other foreign investment $US 1.16 million.

The foreign investment actually utilized was $US 406.41 million, a decrease of 17.91 per cent over $US 495.068 million in 1989. Among the actually used foreign investment, foreign loans were $US 127.43 million, foreign direct investment $US 276.96 million and other foreign investment $US 2.02 million.

Of 241 projects of foreign direct investment, 210 were equity joint ventures, 1 was contractual joint venture and 30 were exclusively foreign-owned enterprises. Of these enterprises, 216 projects were productive and 25 were non-productive. Classified by trades, 33 were involved in textile, 18 in chemical industry, 50 in electronics, 8 in machinery, 8 in instruments and meters, 86 in other industries, 6 in agriculture, forestry, animal husbandry, fishery and water conservancy, 3 in construction, 1 in transportation, 8 in house property and public facilities, 8 in tourism and 12 in restaurants and catering trade.

The foreign investment was from 18 countries and regions. The major investment came from the following countries and regions: 108 from Hong Kong with the value of $US 37.81 million; 32 from Taiwan Province, $US 25.20 million; 44 from the United States, $US 10.66 million; 29 from Japan, $US 8.92 million.

By the end of 1990, 382 foreign-invested enterprises had been put into operation, of which, 165 were put into production in 1990. The output value of the year totalled RMB 5,125.61 million yuan, the income from sales was RMB 5,823.44 million yuan with the total value of profits amounting to RMB 247.03 million yuan, and the foreign exchange earnings reached $US 103.28 million. The balance of income and expenditure of foreign exchange was achieved with the surplus amounting to $US 68.86 million.

Technology import and export

85 contracts of technology and equipment import were signed and approved with the contract value of $US 71 million, a decrease of 34.26 per cent over $US 108 million in 1989.

Technology and equipment were introduced from 17 countries and regions. They were mainly from Germany with the value of $US 15.02 million, accounting for 21.15 per cent of the total; from Hong Kong, $US 12.01 million, 16.90 per cent; from France, $US 11.17 million, 15.73 per cent; from the United States, $US 9.17 million, 12.92 per cent; from Finland, $US 4.70 million, 6.62 per cent and from Japan, $US 3.41 million, 4.80 per cent.

The imported technology and equipment were mainly involved in such industries as municipal facilities construction, energy, communications, textile, automobile, chemical industry, electronics, light industry, machinery and metallurgy. About 100 projects were put into operation in 1990, and the investment realized amounted to RMB 1.2 billion yuan. The increased output value would reach RMB 1.3 billion yuan after the operation of these projects with the profits and taxes amounting to RMB 300 million yuan, and the foreign exchange earnings would reach $US 60 million. Most of these projects were the ones for export and foreign exchange earning.

166 contracts of technology export were signed and approved with the contract value of $US 40 million, a decrease of 20 per cent over $US 50 million in 1989. $US 29.7 million were earned in 1990, increased by 2 times over $US 10 million in 1989. The technology export mainly covered mature industrial technology and complete plant, and products of high and new technology. For example, the technology and complete plant for rods and bars production were exported to Indonesia with the value of $US 3.9 million.

Foreign economic cooperation

In 1990, 109 contracts were signed on foreign contracted projects and labour service with the contract value of $US 37.56 million, an increase of 78.94 per cent over $US 20.99 million in 1989. The business turnover achieved was $US 10.56 million, an increase of 3.83 per cent over $US 10.17 million in 1989. Altogether 364 people for labour service were sent abroad, and 336 people remained abroad at the end of the year. The labour service personnel were sent to 32 countries and regions such as the United States, Japan, the former Soviet Union, Germany, Australia, Tanzania, Tunisia, Mozambique, Norway, Bolivia and Hong Kong. The major contracted projects included the resident buildings in Zanzibar, veterinary school in Rwanda, the children's playground in Guinea, and the Buddhist pagoda in Sri Lanka. The completed project was the House of the Youth in Tunisia.

Beijing undertook 8 projects for foreign aid, all were construction ones. There were 6 recipient countries, i.e. Tunisia, Mauritania, Zaire, Tanzania, Sri Lanka and Mozambique. 120 people for foreign aid were sent abroad, and 12 people remained abroad at the end of the year.

Beijing received 1 item of aid from a United Nations organization and 1 bilaterial aid item with the value totalling $US 1.98 million. They were Beijing Training Centre of Communications Administration and the Vocational Education Centre of Chaoyang District in Beijing. 28 recipient projects were under performance with the value of $US 52.33 million. 5 projects had been completed with the value of $US 2 million. All the completed recipient projects achieved good social and economic results, of which the laser safety testing and researching item filled in the gaps in China's laser testing field.

Beijing has 10 newly established overseas enterprises, of which, the Chinese investment amounted to $US 3.6 million, all were investments in materials. These enterprises were: Li Guo International Trade and Transportation Co., Ltd., Da Yan Inc., Ltd. and Soft Ware Know-how Co., Ltd. in Japan; the Beanflower Restaurant, Inc. in the United States; the Salon-Qi Nu Li Co., Ltd., Beijing; Duo Ji Restaurant and Xin Ji Foodstuffs Co., Ltd. in the Russian Federation; Canberra-Beijing Dong Lai Shun Hotel in Australia; Bei Luo Foodstuffs Co., Ltd. in Italy and Xi Da Computer-Sinology Co., Ltd. in Germany. In 1990, the total business turnover of overseas enterprises, were $US 224 million, equivalent to that of 1989.

Table 1. Export commodity structure

Classified by agriculture, light and heavy industries				*Classified by international trade standard*

Italy	29.10	2.20
The Netherlands	27.35	2.07

3. FUJIAN PROVINCE

Situated on the southeastern Chinese coast, Fujian Province is separated from Taiwan Province by a strait of the same name. It has an area of 121,400 sq km and a population of 28,960,000 by year-end in 1989. Fujian has a 3,320 km of coastline with many deep harbours. More than 40 per cent of Fujian is forested, and such deposits as quartz, pyrophyllite, kaolin clay, marble, iron, tungsten, noibium, tantalum and barite have been discovered in different parts of the province. The major ports on the coast are Xiamen and Fuzhou, the provincial capital.

Foreign trade

In 1990, the total export and import of Fujian Province valued at $US 3.171 billion, an increase of 32.29 per cent against $US 2.397 billion in 1989.

The year's total volume of export goods purchased was RMB 7.599 billion yuan, which increased by 85.25 per cent as compared with that of RMB 4.102 billion yuan in 1989.

The whole export valued at $US 2.238 billion, 34.67 per cent higher than $US 1.662 billion in 1989, taking up 14.31 per cent of the Province's GNP and 4.30 per cent of the country's total export volume. It ranked the 7th among the nation's total export volume.

The export commodities included $US 248 million for farm and sideline products, taking up 11.08 per cent of the total export volume, $US 1.617 billion for light industrial goods, 72.25 per cent, and $US 373 million for heavy industrial products, 16.67 per cent. The proportion of farm and sideline products decreased by 1.29 percentage points as against 1989, while the proportion of light industrial products and heavy industrial products increased by 1.09 percentage points and 0.20 percentage points respectively. According to the classification of international trade standard, primary products were $US 487 million, accounting for 21.76 per cent and industrial finished products were $US 1.751 billion, taking up 78.24 per cent.

There were 24 varieties of staple commodities each with its export value over $US 10 million, and their export value amounted to $US 819 million, accounting for 36.60 per cent of the total export. 14 commodities each with export value over $US 20 million were colour TV receivers, sports shoes, gold jewelry, canned mushroom, nylon bags, canned asparagus, plastic slippers, frozen prawn, nylon umbrella, PV shoes, Oolong tea, electronic watches, stone-carved goods, and cement, the export value of which amounted to $US 716 million, taking up 31.99 per cent of the total export.

The markets for the Province's export goods covered 125 countries and regions, and the major ones were: Hong Kong, $US 1.057 billion, Japan, $US 286 million, the United States, $US 268 million, Germany, $US 105 million, Singapore, $US 56 million, and Taiwan Province, $US 65 million. The volume of export to these countries and regions totalled $US 1.837 billion which took up 82.08 per cent of the Province's whole export.

The total import of the Province was $US 933 million, which increased by 26.94 per cent as against that of $US 735 million in 1989. Of the import goods, means of production valued $US 667 million while means of subsistence valued $US 266 million, taking up 71.49 per cent and 28.51 per cent of the total import respectively. The major import commodities were gold, $US 57.15 million, electronic parts and components, $US 55.16 million, chemical fibre fabric, $US 49.95 million, and palm oil, $US 48.53 million, the import value of which totalled $US 211 million, taking up 22.62 per cent of the Province's whole import.

The markets for the Province's import commodities were 43 countries and regions, of which the major ones were: Hong Kong, $US 457 million, Japan, $US 152 million, the United States, $US 58 million, Singapore, $US 39 million, Malaysia, $US 22 million, Germany, $US 17 million, Indonesia, $US 13 million, the former Soviet Union, $US 11 million and Taiwan Province, $US 45 million, and totally there were $US 814 million worth of import from these countries and regions, which took up 87.25 per cent of the total import.

Utilization of foreign capital

With the approval of the provincial authorities concerned, $US 1.236 billion worth of contracts for utilization of foreign capital were concluded in the year, a 28.62 per cent increase over that of $US 961 million in 1989, in which, foreign loans were $US 58.53 million. The number of foreign direct investment projects was 1,043 with a contracted value of $US 1.162 billion. Other foreign investment was $US 15.99 million.

The actually-utilized foreign capital was $US 380 million, a 2.81 per cent decrease as compared with that of $US 391 million in 1989, in which, foreign loans were $US 58.53 million, foreign direct investment amounted to $US 290 million and other foreign investment valued $US 31.13 million.

Of 1,043 foreign direct investment projects, 432 were equity joint ventures with a contracted value of $US 285 million, 94 were contractual joint ventures with a value of $US 73 million, and 517 were wholly foreign-owned enterprises with a value of $US 804 million. And of the total foreign direct investment, productive projects took up 90 per cent and more. In terms of sectors and business lines, there were 42 in agriculture, 930 in industry, 1 in construction, 5 in transportation, 10 in commerce, 46 in real estates, 2 in culture and arts and 7 in other lines.

The foreign investments were mainly from Hong Kong, Japan, the United States and other Southeast Asian countries and regions, among which, 607 projects were from Hong Kong with a contracted value of $US 565 million, 380 from Taiwan Province with $US 462 million, 5 from the United Kingdom with $US 22 million, 24 from Japan with $US 23.96 million, 14 from the United States with $US 20.40 million and 8 from Singapore with $US 10.37 million.

In the year, enterprises with foreign investment which had been put into operation realized an industrial output value of RMB8.447 billion yuan, 46.52 per cent higher than that of RMB5.765 billion yuan in 1989, taking up 28 per cent of the total industrial output value. Export from these enterprises amounted to $US 797 million which increased by 71.03 per cent as against $US 466 million in 1989, taking up 35.61 per cent of the Province's whole export value.

Technology import and export

The Province signed 56 contracts to import technologies and equipment with a contracted value of $US 29.82 million, an increase of 6.39 per cent as compared with that of $US 28.03 million in 1989. The imports were mainly from Japan, the United States, Germany and Taiwan Province of China, among which, 22 projects from Japan with a contract value of $US 8.56 million, 8 projects from the United States ($US 5.71 million), 5 projects from Germany ($US 4.15 million), 2 projects from Italy ($US 2.67 million) and 5 projects from Taiwan Province of China ($US 2.48 million). The main projects were precision casting production line, technical equipment for polyurethane production, electric spark machining equipment, and bicycle circle-forming equipment. In the year, 181 projects were put into running. When these projects yield economic results, a new output value of RMB 1.87 billion yuan, a new profits and tax of RMB 520 million yuan and export earnings of over $US 50 million yuan can be raised.

Foreign economic cooperation

1,167 contracts for undertaking overseas engineering projects and labour service cooperation were signed in the year with a contracted value of $US 176 million, a decrease of 5.38 per cent as against that of $US 186 million in 1989. The Province realized a turnover of $US 161 million, an increase of 12.59 per cent over $US 143 million in 1989. In the year, 7,640 labour service workers were sent abroad. At the end of the year, 9,686 persons worked abroad. They were mostly dispatched to 30 countries and regions such as Macau, Singapore, Saipan of the United States, Hong Kong, Taiwan Province, etc., and the projects which the Province had undertaken were: the Drainage Works at Tian Suiwai Road, Hong Kong, Hong Kong Zai Road Project, Hualong Building and Huadu Hotel in Macau.

The Province had undertaken 5 China-aided projects by way of supplying complete sets of equipment, which were mainly the projects in agriculture, water and electricity, municipal engineering, etc. with its recipients of Antigua and Barbuda, Benin, Algeria, Sierra Leone and Equatorial Guinea, 65 technicians were sent to the projects and there were 149 technicians remained working outside by the end of the year.

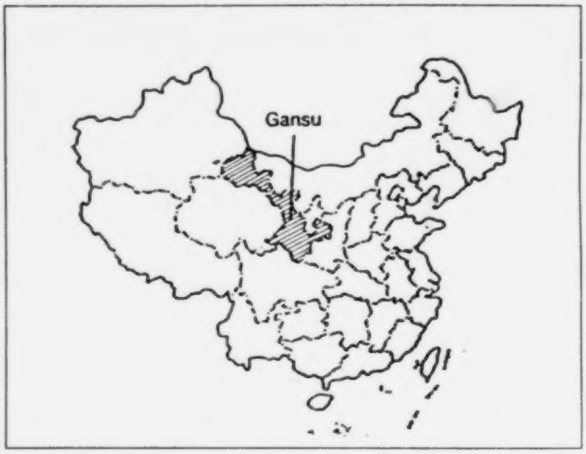
The Province received 9 projects with $US 12 million grant from international organizations and bilateral or multilateral organizations mainly for public health for women and babies in the exemplary counties, planned immunity, training for primary and nursery teachers, and disaster relief.

There were 2 overseas enterprises approved for establishing in Argentina and Thailand, with the Chinese investment of $US 1.12 million.

4. GANSU PROVINCE

Lying on the upper reaches of the Yellow River, Gansu is a land locked province in Northwest China through which ran the ancient Silk Road that linked China with West Asia.

Total area:	453,700 sq km
Population:	21,719,000
Capital:	Lanzhou



Foreign trade

The total volume of Gansu's exports and imports reached $US 202.14 million in 1990, up 8.25 per cent over $US 186.74 million in 1989.

The volume of goods purchased for 1990 amounted to RMB 1,040.38 million yuan, an increase of 23.45 per cent over the figure of RMB 844.17 million yuan in 1989.

Its export volume was $US 185.67 million, up 21.05 per cent over $US 153.38 million in 1989, making up 4.18 per cent of the Provincial GNP, 0.36 per cent of the national total exports.

In the composition of export commodities, farm and sideline products were valued at $US 43.59 million, making up 23.48 per cent of the total export volume, its proportion reduced 0.42 percentage point over 1989; light industrial products were valued at $US 56.56 million, making up 30.46 per cent of the total export value, its proportion reduced 1.94 percentage points over 1989; heavy industrial products were valued at $US 85.52 million, making up 46.06 per cent of the total export value, its proportion rose 2.36 percentage points over 1989. Classified by SITC system, primary products were valued at $US 91.6 million, making up 49.33 per cent of the total export volume; industrial manufactured goods were valued at $US 94.07 million, making up 50.67 per cent of the total export volume.

Table 4. Commodities each with export value above $US 3 million

Value range	*Commodity*	*Export value ($US million)*	*Per cent of total export*
Above $US 10 million, 2 items	Ferrosilicon and hand-made carpet	22.34	12.03
Between $US 5-10 million, 2 items	Zinc ores and garments	10.96	5.90
Between $US 3-5 million, 5 items	Sodium sulphate anhydrous, radio recorder set, oil pump, lentils beans, bearings	20.22	10.89

The commodities were exported to 58 countries and regions. Among them, $US 54.82 million were sold to Hong Kong, making up 29.53 per cent of the total export value; $US 38.31 million were sold to Japan, making up 20.63 per cent; $US 29.09 million were sold to Western Europe, making up 15.67 per cent; and $US 14.12 million were sold to the United States, making up 7.6 per cent.

The total value of imports amounted to $US 16.47 million, down 50.63 per cent from the figure of $US 33.36 million in 1989. All the import commodities were means of production. Among them, primary products amounted to $US 5.5 million, making up 33.39 per cent of the total import value; industrial manufactured goods amounted to $US 10.97 million, making up 66.61 per cent. The major import commodities were: complete sets of equipment, $US 3.46 million, making up 21.01 per cent of the total import value; steel sheet, $US 3.3 million, making up 20.04 per cent; chemical materials, $US 1.43 million, making up 8.68 per cent. The major import markets were: Hong Kong, $US 8.37 million, making up 50.82 per cent of the total import value; Japan, $US 3.46 million, making up 21.01 per cent.

Utilization of foreign capital

In 1990, 19 contracts for the utilization of foreign capital were approved, involving contracted foreign funds of $US 21.04 million, down 64.12 per cent from $US 58.64 million in 1989. Of these, 2 on foreign loans involving foreign funds of $US 4.5 million; 8 on foreign direct investment with $US 2.92 million; 9 on other foreign investment with $US 13.62 million. $US 4.71 million was actually used, up 26.7 times over 1989, among which, $US 2.4 million were for foreign loans, $US 1.54 million for foreign direct investment, $US 770,000 for other foreign investment.

Out of the 8 foreign direct investment projects, 7 were for equity joint ventures, and 1 for wholly foreign-owned enterprise, and 7 for the productive projects. They were involved in the trades such as machinery, chemical industry, medicine, food, service, etc.

The foreign funds were from 6 countries and regions such as the United States, Switzerland, Hong Kong, Japan, etc. Of the projects, 3 from the United States with contracted foreign funds of $US 9.23 million; 2 from Switzerland with $US 2.44 million; and 8 from Hong Kong with $US 3.1 million.

Technology import and export

The Province signed 13 contracts for importing technology and equipment, costing $US 12.57 million, an increase of 35.60 per cent over $US 9.27 million in 1989. It actually used $US 9.4 million, up 182 per cent over $US 3.33 million in 1989.

Technology was imported from the following countries: 5 contracts with Japan, 2 with the United States, 2 with Germany, and 4 with Hong Kong. The imported technology and equipment were used in petrochemicals, machinery, light and textile industries, electronics, post and telecommunications, metallurgy, etc.

Foreign economic cooperation

The Province signed 22 contracted projects and labour service contracts, with the value of $US 135.75 million, up 32.66 per cent over $US 102.33 million in 1989. The turnover reached $US 41.7 million, up 2.6 times over $US 11.70 million in 1989. 403 people were dispatched abroad all the year. By the end of 1990, 363 people worked abroad. The major constructing projects were: the international technical training center and highway engineering in Zimbabwe, the bleachers of the Independence Square in Ghana, the well digging and water supply engineering in Cameroon, the Huizhou 26-1 engineering in Singapore etc.

The Province implemented 6 economic aid programmes in foreign countries covering medical care and health, civil construction, etc. The recipient countries were: Zimbabwe, Madagascar, Togo, Cape Verde and Tanzania. 118 people were sent abroad in the year. By the end of the year, 122 people worked abroad. One aid project was completed in the year.

The Province implemented 44 multilateral and bilateral aid projects with $US 16.9 million. They were mainly from the international organizations such as UNFPA, UNCF, UNDP and WFP as well as Canada, Japan and Australia etc. The main aid projects included the comprehensive economic developing project of Huining county from the Government of Canada, the cultural relics' preservation project in Dunhuang from Japan and the agricultural system research project from Australia, etc.

Two enterprises were set up abroad involving $US 790,000 of Chinese investment. They were Longxin Company Ltd. in Singapore and Nanfang Feilong Company Ltd. in Australia.

5. GUANGDONG PROVINCE

Situated on the South China coast, Guangdong is one of the richest and most economically developed provinces in China. It is a producer of rice, fresh-water fish, sugar-cane, pineapples, bananas, litchis, oranges and other sub-tropical fruits. It has three special economic zones – Shenzhen, Zhuhai and Shantou, two coastal open cities – Guangzhou and Zhanjiang and three open areas on the deltas of the Pearl, Hanjiang and Jianjiang rivers.

Total area:	178,000 sq km
Population in 1989:	60,249,800
Provincial capital:	Guangzhou City

Foreign trade

In 1990, the total export and import volume of Guangdong Province amounted to $US 16.309 billion, increased by 25.46 per cent over $US 12.999 billion in 1989.

The total volume of export commodities purchased was RMB 23.423 billion yuan, with an increase of 10.25 per cent over RMB 21.245 billion yuan in 1989.

The total export volume of Guangdong Province was $US 11.018 billion, up 34.89 per cent against $US 8.168 billion in 1989, accounting for 37.38 per cent of GNP of the province of RMB 141 billion yuan, and 21.16 per cent of the total volume of export of the whole country, ranking the first in all the provinces, regions and cities of the country.

Of the province's total export volume, specialized foreign trade corporations was $US 3.518 billion; industry and trade corporations, $US 364 million; local foreign trade corporations, $US 2.294

billion; foreign trade corporations under the ministries and commissions of the State Council, $US 457 million; enterprises with foreign investment, $US 3.724 billion; and earnings by processing with supplied materials, manufacturing with supplied samples, assembling with supplied parts, and compensation trade, $US 661 million. Besides the export undertaken by the subsidiary foreign trade corporations under ministries and commissions of the State Council in Guangdong, the export value of the province was $US 10.56 billion.

Export commodities were sold to 161 countries and regions, of which $US 8.543 billion to Hong Kong, accounting for 80.90 per cent of the total export volume; $US 403 million to the United States, accounting for 3.82 per cent; $US 288 million to Japan, accounting for 2.73 per cent, $US 166 million to Macau, accounting for 1.57 per cent; $US 140 million to Singapore, accounting for 1.33 per cent.

Import commodities totalled $US 5.749 billion, increased by 19.00 per cent against $US 4.831 billion in 1989. Of them, the volume of primary products was $US 1.033 billion, accounting for 17.97 per cent of the total import volume; the industrial finished products $US 4.716 billion, accounting for 82.03 per cent; the imports for the means of production, goods in shortage and imported technology and equipment and key spare parts accounting for 81 per cent. The main import commodities were complete equipment, various kinds of mechanical and electronic equipment, chemical fertilizer, agricultural chemical, steel products, rubber and chemical industrial materials and grain, etc.

Utilization of foreign capital

Guangdong signed and approved 7,196 contracts on utilizing foreign capital, with contract value at $US 3.168 billion, decreased by 12.56 per cent against $US 3.623 billion in 1989. Of them, 47 foreign loans with a value of $US 303 million; 3,042 were foreign direct investment, with a value of $US 2.69 billion; 4,107 were other foreign investment, with a value of $US 175 million.

The actual use of foreign capital was $US 2.023 billion,decreased by 15.67 per cent against $US 2.399 billion in 1989. Of them, the foreign loans were $US 441 million; foreign direct investment was $US 1.460 billion; and other foreign investment was $US 122 million.

Among the 3,042 foreign direct investment projects, there were 1,213 equity joint ventures, 1,018 contractual joint ventures, and 811 wholly foreign-owned enterprises. Of them, the productive projects accounted for more than 90 per cent of the total projects with foreign direct investment. They scattered in the following fields: industry, 2,907 projects; transportation, telecommunication and post communication, 25 projects; farming, forestry, animal husbandry, fishery and water conservancy, 47 projects; and other fields, 63 projects.

Foreign direct investment mainly come from Hong Kong, Macau, Taiwan Province, Japan, Philippines, Thailand, Malaysia, Singapore, Indonesia, Kuwait, United Arab Emirates, Republic of Korea, Germany, France, Belgium, United Kingdom, Peru, Bolivia, Canada, the United States, Australia, etc. Among them, 2,432 projects were invested by Hong Kong enterprises with the volume 2,109 billion, accounting for 78.40 per cent of the total foreign investment.

By the end of 1990, 7,079 foreign investment enterprises had been put into operation. 810 had been confirmed as export-oriented enterprises and 114 technologically advanced enterprises. The export volume of the year was $US 3.724 billion, increased by 63.56 per cent over that of 1989, accounting for 35.26 per cent of the total export volume of the province. The number of the "processing with supplied materials, manufactured with supplied samples, assembling with supplied parts, and compensation trade" enterprises had reached 20,000, with 1.37 million employees.

Technology import and export

34 contracts on import of technology and equipment were signed, with a contract value of $US 70.2617 million, decreased by 62.43 per cent against that of 1989. The import projects were mainly from the following countries: the United States, $US 22.7613 million; Switzerland, $US 16.527 million; Germany, $US 13.193 million; Japan, $US 11.118 million. The expenditure of the import projects of energy, transportation, post and telecommunications, and raw materials was $US 39.95 million, accounting for 56.86 per cent of the total.

76 projects were contracted for technology export, with a contract value of $US 29.352 million, 1.26 times over $US 12.9992 million in 1989. Of them, technology export amounted to $US 22.824 million, and technological products export $US 6.528 million.

Foreign economic corporation

997 contracts on foreign projects and labour service abroad were signed with a contract value of $US 97.63 million. The business turnover was $US 107 million. By the end of the year, 8,812 labour service personnel were working abroad.

Guangdong undertook 14 foreign economic aid projects in 11 countries including Zaire, Papua New Guinea, Bolivia, Mauritius, Antigua and Barbuda, Madagascar, Tanzania, Sri Lanka, Somali, Zambia, the Congo. The above-mentioned projects were involved in light industry, agriculture, transportation, hydropower, etc. 85 sets and 2,340 mechanical and electrical products were provided for foreign aid projects. By the end of the year, 244 engineers and technicians were carrying out the projects abroad.

In 1990, a joint venture was established in Brazil, with the investment of Chinese side $US 300,000.

There were 248 items of commodities each with export volume exceeding $US 5 million, totalling $US 6.82536 billion, accounting for 64.63 per cent of the total export volume.

Heavy industrial products	1.823	17.27	18.12	Industrial manufactured products	8.523	80.71	75.09

Table 6. Main export commodities

Value classifications	*Commodities*	*Export value ($US billion)*	*Percentage of total*
13 commodities each with export value over $US 100 million	Garments, cotton cloth, colour TV sets, electronic components, radio cassette recorder, leather shoes, pottery and porcelain, toys, drawnworks, bicycles, ceiling fan, leather rubber shoes, oil products.	2.719	25.75
20 commodities each with export value $US 50-100 million	Frozen prawn, silk and satins, pharmaceutical raw materials, tea, furniture, steel products, cotton polyester fabrics, leather rubber shoes, knit grey, sugar, cotton yarn, cotton singlet and vest, other sport shoes, ships, battery, telephone sets, ornaments, live pig, live chicken, undershirt cloth.	1.246	11.80
10 commodities each with export value $US 10-50 million	Live pond fish, cigarette, electric fan, rattan work, artificial flowers, cement, tools, plate glass, down garments.	2.115	20.03

6. GUANGXI PROVINCE

Situated on the South China coast, this autonomous region has an area of 236,000 sq km and a population of 41,510,000 - 14,000,000 of whom are people of the Zhuang Nationality. Paddy, sugar-cane, oranges and pineapples are extensively cultivated in this autonomous region which has a subtropical climate. The capital of the Guangxi Zhuang Autonomous Region in Nanning.

Foreign trade

In 1990, the import and export value of Guangxi Zhuang Autonomous Region was $US 867.99 million, increased by 15.06 per cent compared with 1989's value of $US 754.35 million.

The volume on the purchase of export commodities totalled RMB 1834.02 million yuan, increased by 14.18 per cent compared with 1989's RMB 1606.25 million yuan.

The export volume was $US 729.44 million, up by 24.84 per cent over 1989's $US 594.30 million, accounting for 9.50 of the region's GNP of RMB36.708 billion yuan, and 1.40 per cent of the nation's export total.

The import value totalled $US 138.55 million, declined by 18.52 per cent compared with 1989's $US 170.05 million. Among the commodities imported, materials for production valued $US 114.58 million, accounting for 82.70 per cent of the import total; materials for livelihood valued $US 23.97 million, accounting for 17.30 per cent of the total. If classified according to international trade standard, the value of primary products was $US 33.32 million, accounting for 24.05 per cent of the import total; that of manufactured goods was $US 105.23 million, accounting for 75.95 per cent of the total.

The major commodities imported were; chemical fertilizer, sugar, diesel oil, trucks, crude oil, steel products, chemical raw materials, cotton, paper pulp and sheets, etc., the value of which amounted to $US 92.7579 million, accounting for 66.95 per cent of the import total.

The imported commodities came from 23 countries and regions, out of which there were 8 major markets. The value of the above mentioned items amounted to $US 119.1068 million, accounting for 85.97 per cent of the import total.

Utilization of foreign capital

Contracts signed and approved amounted to 133 with a foreign investment of $US 137.47 million, increased by 2.97 times compared with 1989's $US 34.67 million, among which, there were 114 contracts of foreign direct investment with an amount of $US 125.21 million. Foreign investment of the rest 19 contracts amounted to $US 12.26 million.

The utilization of foreign capitals in real terms for the whole year was $US 35.63 million, 32.77 per cent less than that of 1989. Out of it, $US 28.66 million was of foreign direct investment, $US 6.97 million was of other foreign investment.

Among the 114 contracts of foreign direct investment, 57 were joint ventures, 31 contractual joint ventures, 26 solely foreign-invested projects. Out of the 114 projects, 107 contracts were for productive projects, and 7 contracts were for non-productive projects. If classified according to line of business, 33 contracts were for light industry, 17 for textile and garment, 11 for food industry, 10 for electronic industry, 7 for machinery, 7 for mining, 5 for agriculture, forestry, animal husbandry and fishery, 3 for pharmaceutical industry, and 26 for others.

Foreign capitals mainly came from: Hong Kong, 82 projects; Taiwan Province, 19; the United States, 7; and Japan, 1 project.

In 1990, foreign exchanges earned by foreign-invested enterprises amounted to $US 44.60 million, 33.04 per cent more than 1989's amount of $US 33.57 million.

Technology import and export

Contracts signed for technology import amounted to 19 with a value of $US 21 million, the actual utilization of foreign exchange was $US 50 million. The technologies and equipments were mainly imported from Germany, the United States, Italy, Japan, Austria, Sweden, the United Kingdom, and Canada, which involved machinery, post and telecommunications, construction materials, mines, light industry, printing, tobacco, electronics, etc. 30 projects with imported technology and equipments had entered into operation.

One contracts for technology export was signed with a value of $US 140,000. It was a set of edible oil refinery equipment exported to Bangladesh by the Guangxi Machinery and Equipment Import and Export Corporation.

Foreign economic cooperation

37 contracts for project contracting and labour services cooperation were signed with a value of $US 26.98 million, reduced by 69.95 per cent from 1989's $US 89.79 million. The turnover was $US 23.2196 million, increased by 72 per cent over 1989's $US 13.50 million. Personnel sent abroad for labour service cooperation totalled 421. The projects involved industry, agriculture, road construction, construction of facilities for sports and public health and were distributed in countries and regions such as Somalia, Angola, Guinea, Bangladesh, Gambia, Pakistan, Jordan, Rwanda, Papua New Guinea, Chad, Guam and Saipan of the United States and Hong Kong.

Six projects under Chinese aid were undertaken in the following four countries: Gabon, Burundi, Chad, and Gambia. They are agricultural, public health, cultural and sports projects. A 29-member medical team was dispatched to Niger. One project was completed, and three were to be continued. Two projects were for technical cooperation. Personnel dispatched for foreign aid totalled 229.

Table 7. Export commodity structure

Classified by agriculture, light and heavy industries				*Classified according to international trade standard*			
Item	*Export value ($US million)*	*Percentage of export total (per cent)*		*Item*	*Export value ($US million)*	*Percentage of export total (per cent)*	
		1990	*1989*			*1990*	*1989*
Agricultural & sideline products	163.21	22.38	19.61	Primary products	324.00	44.42	49.38

Heavy industrial products	200.69	27.51	33.54	Manufactured products	405.44	55.58	50.62

There were 32 kinds of commodities each with the export value surpassing $US 5 million, the export total of which amounted to $US 455.17 million, accounting for 62.40 per cent of the total export volume.

The export commodities were sold to 91 countries and regions, out of which there were 10 major markets.

The export volume amounted to $US 632.201 million, accounting for 86.67 per cent of the total export volume.

Table 8. Commodities each with the export value surpassing $US 5 million

Classified by value (million $US)	*Item*	*Export value ($US million)*	*Percentage of total*
Over 30m. (2 items)	Sugar, canned food	97.8449	13.41
20-30m. (5 items)	Cement, rosin, tin ingot, fireworks, cotton fabrics	117.7568	16.14

7. GUIZHOU PROVINCE

Guizhou that forms the eastern part of the Yunnan-Guizhou highlands is a very mountainous province in southwestern China. It has an area of 176,000 sq km and a population of 31,710,000, about 1/3 of which is made up of people of the Miao, Bouyei, Dong, Yi, Sui, Tujia, Hui, Yao, Zhuang and three other ethnic minorities. The provincial capital is Guiyang, a communication hub with railways and highways radiating to Sichuan, Yunnan and Hunan provinces and the Guangxi Zhuang Autonomous Region.

Guizhou is a mineral-rich province with deposits of phosphorus, aluminium, coal, antimony, manganese, mercury, rare-earth, silicon, baryte, marble and limestone. Its hydro-power resources are estimated at 18.74 million kw. Already discovered are 2,500 plant species and 1,500 kinds of grass.

Foreign trade

The total import and export value of Guizhou Province in 1990 topped $US 213.69 million, an increase of 15.13 per cent over $US 185.6 million in 1989.

The purchasing value for exports amounted to RMB727 million yuan, a rise of 2.83 per cent over RMB707 million yuan in 1989.

The export value totalled $US 153.05 million, an increase of 15.93 per cent over $US 132.01 million in 1989, taking up 1.86 per cent of the Province's GNP and 0.29 per cent of the nation's total export.

The composition of the export commodities was: agricultural and sideline products, $US 21.60 million, accounting for 14.11 per cent of the total; light industrial products, $US 36.41 million, 23.79 per cent; heavy industrial products, $US 95.04 million, 62.01 per cent. According to Standard for International Trade Classification, primary products were valued at $US 55.36 million, accounting for 36.17 per cent of the total; industrial manufactures, $US 97.69 million, representing 63.83 per cent.

Commodities each with export value over $US 5 million were six kinds including bauxite, abrasive, kidney beans, crude zinc, barite, bearings with total export value of $US 26.05 million, accounting for 17.02 per cent. Of the total export bauxite was $US 15.89 million and, abrasive was $US 10.16 million.

Exports were mainly sold to 57 countries and regions.

The import value totalled $US 60.65 million, a 13.16 per cent increase over $US 53.59 million in 1989. Of that, means of production was $US 55.53 million, accounting for 91.57 per cent of the total import; means of livelihood, $US 51.12 million, taking up 8.43 per cent. According to SITC, primary products were valued at $US 11.21 million, representing 18.48 per cent of the total import; industrial manufactured products, $US 49.44 million, accounting for 81.52 per cent.

The major import commodities were: cellulose, filter tip, natural rubber, packaging machine and parts, plant equipment, equipment for light industry, wire communication equipment, kinescope, cord fabric and chemical machine and parts, etc, their import value totalled $US 41.77 million, accounting for 68.87 per cent.

The imports were mainly form 19 countries and regions.

Utilization of foreign capital

24 contracts of utilizing foreign capital were signed and approved with a contractual value of $US 37.34 million, a 0.35 per cent down over $US 37.47 million in 1989. Of that, there were 1 foreign government loan, with a value of $US 12.77 million; 21 foreign direct investment, with a value of $US 16.32 million; 2 other foreign investments, with a value of $US 8.25 mullion.

Actually used foreign investment amounted to $US 29.83 million, an increase of 16.25 per cent over $US 25.66 million in 1989. Of that, the foreign loans were $US 19.25 million, the foreign direct investment was $US 4.68 million, and other foreign investment was $US 5.90 million.

Out of 21 foreign direct-funded projects, 15 were equity joint ventures, 3 were contractual joint ventures and 3 were solely foreign-owned enterprises. 21 projects were all productive enterprises. Major industries covered were medicine, food processing, timber processing, chemical industry, machinery, leather and fur, non-metal selecting, ferrous metal smelting, printing, rubber products and textiles.

Foreign funds were mainly from 4 countries and regions. Of the total, 18 projects were from Hong Kong with $US 21.10 million, 3 from Taiwan Province with $US 1.94 million, 1 from the United States with $US 1.18 million, and 1 from Australia with $US 350,000.

The foreign-funded enterprises in the Province achieved turnover of RMB101 million yuan, export value of $US 8.10 million in the year.

Technology import and export

11 contracts on introducing technology and equipment were signed with a contractual value of $US 7.63 million, 4.12 fold increase over $US 1.49 million in 1989; actual foreign exchange spending was $US 3.93 million, 1.64 fold increase over $US 1.49 million in 1989.

Introduced projects came from 5 countries and regions: Japan with $US 1.85 million, the United Kingdom with $US 3.70 million, Germany with $US 870,000, Italy with $US 1.14 million, and Hong Kong with $US 80,000. The projects covered such industries as post and telecommunications, electronics, machinery, light industry and textile, chemistry and foodstuffs.

4 projects were already put into production in 1990.

Foreign economic cooperation

Contracts on contracting engineering projects and labour service cooperation were continuously carried out in 1990, turnover of $US 4.57 million was obtained, 226 personnel were sent abroad and 139 persons remained abroad at the end of the year. Countries where the labour service personnel were sent, were Algeria, Yemen, Iraq, etc.

4 assistance projects in foreign countries were undertaken, recipient countries were Ecuador, Cameroon, Rwanda, Sierra Leone. The industries involved were building, water and electricity, planting etc. 32 persons were sent abroad, and 15 persons remained abroad at the end of the year. Moreover, 1,310 units (sets) of machinery and electric products for foreign aid were completed.

7 international organizations and bilateral aid projects were received, with a total value of $US 24.03 million. Funds were from the United Nations Development Programme, Population Fund, Children Fund, Japanese Government, Canadian Cooperative Council and New Zealand Government.

8. HAINAN PROVINCE

Hainan Island which had been part of Guangdong Province, became a province and the nation's largest special economic zone in April 1988 with National Peoples' Congress approval. Consisting of the main island of Hainan and upwards of 200 islets and coral reefs including the Xisha, Nansha and Zhongsha islands in the South China Sea, Hainan Province has a land area of 34,000 sq km inhabited by 6,388,000 people of the Han, Li, Miao and other nationalities. The provincial capital is Haikou, a port on the island's northern coast.

Foreign trade

In 1990, the total export and import value of Hainan Province reached $US 937.38 million, up 4.62 per cent against $US 869 million in 1989.

The total value of goods purchased for export reached RMB 2.41 billion yuan, up 7.59 per cent over RMB 2.24 billion yuan in 1989.

The export value totalled $US 471.38 million ($US 501.38 million including the export value of the corporations under the central ministries and commissions), up 30.64 per cent over $US 360.82 million in 1989, accounting for 23.6 per cent of Hainan Province's GNP.

The import value of the specialized foreign trade corporations and industrial corporations under Hainan Provincial Trade Department amounted to $US 43.38 million, down 49.79 per cent against $US 86.39 million in 1989. The import commodities were feeding stuffs, TV sets and sound equipment, western medicine, synthetic fibre, plywood and kinescopes from 16 countries and regions.

There were 14 commodities each with export value over $US 5 million, and they were jade ornaments, tin ore, leather working gloves, shapes and sections steel, mild steel square bars, spun rayon, carpets, new decors porcelain, frozen prawn, vegetable, silk, fire crackers and fireworks, grey cloth, manioc slices.

These commodities were sold to 49 countries and regions.

Utilization of foreign capital

252 contracts on foreign direct investment were signed and approved with the value of $US 128.82 million, down 53.48 per cent against $US 279.61 million in 1989. In these contracts, 98 were for equity joint ventures with the value of $US 38.53 million, 30 were for contractual joint ventures with the value of $US 11.88 million, and 124 were for wholly foreign-owned enterprises with the value of $US 78.41 million. The amount of actual utilization of foreign capital reached $US 190 million, up 18.03 per cent over that in 1989.

In the 252 contracts, 186 were for productive enterprises and 66 for non-productive enterprises, which were in such sectors as agriculture, forestry, animal husbandry and fishery, industry, communication and transportation, real estate management, public service, and culture and education. The main sources of foreign capital include 15 countries and regions, such as Hong Kong, Macau, Taiwan Province, Japan, the United States, Singapore, Switzerland, Argentina, and the Russian Federation. 159 projects were from Hong Kong with foreign capital of $US 108.89 million; 50 from Taiwan Province with $US 23.5 million, 4 from Singapore with $US 20.28 million; 12 from Japan with $US 7.07 million; and 1 from the Russian Federation with $US 5 million.

9. HEBEI PROVINCE

Hebei Province has a population of 58,810,000 according to a year-end count in 1989. It has 6.6 million hectares of farmland on which grow wheat, maize, cotton and other crops. The province has big reserves of coal, petroleum, iron and other minerals and a fairly developed economy. The provincial capital is Shijiazhuang, an important industrial center and a railway hub 270 km south of Beijing.

Foreign trade

In 1990, the total export and import value of Hebei Province was $US 1.952 billion, showing an increase of 3.4 per cent over $US 1.888 billion of 1989.

The purchasing value of export commodities was RMB6.076 billion yuan, increased by 40.68 per cent over RMB4.319 billion in 1989.

The export value reached $US 1.737 billion, a rise of 6.11 per cent over $US 1.637 billion of 1989, accounting for 7.25 per cent of the Province's GNP and 3.34 per cent of the country's total export value, ranking the ninth.

There were 22 commodities each earning over $US 10 million, the value totalling $US 1.206 billion taking up 69.43 per cent of the total export value. They were crude oil, cotton piece goods, cotton, cotton polyester blended fabrics, coal, cotton yarn, garments, cotton knitwear, carpet, maize, canned goods, frozen prawn, chestnuts, pottery and porcelain, etc.

Commodities were exported to 125 countries and regions, of which Japan, Hong Kong, the United States, Germany, former Soviet Union, Singapore, the Netherlands, Republic of Korea, the United Kingdom, and Czechoslovakia were 10 major exporting countries. The markets each with importing China's commodities over $US 100 million included Japan, $US 701 million, taking up 40.36 per cent of the total export value; Hong Kong, $US 341 million, 19.63 per cent; the United States, $US 120 million, 6.91 per cent.

The import value was $US 215 million which was 14 per cent less than $US 250 million of 1989. Of the imports, means of production took up 94.88 per cent, totalling $US 204 million; means of subsistence, 5.12 per cent, $US 11 million. Classified by international trade standard, the primary products took up 58.60 per cent, totalling $US 126 million; industrial finished products, 41.40 per cent, $US 89 million. The main imports covered fertilizers, chemical raw materials, cotton, electronic instruments, steel products, complete sets of equipment, light industrial machinery, and chemical industrial machinery, etc. with a value reaching $US 152 million, accounting for 70.70 per cent of the total import. The goods were imported from 27 countries and regions, some 9 major importing countreis of which were Japan, the United States, Hong Kong, Germany, and Canada, etc. with a value of $US 180 million, accounting for 83.72 per cent

Utilization of foreign capital

129 contracts on using foreign capital were signed and approved, the contract value of foreign capital being $US 131.42 million, 8.70 per cent less than $US 143.94 million of 1989. Of those, there were 9 contracts on foreign loans, valuing $US 42.50 million; 110 contracts were on foreign direct investments valuing $US 85.93 million; and 10 contracts were on other investment, valuing $US 2.99 million.

The actual input of foreign capital was $US 86.97 million, 19.66 per cent less than $US 108.25 million of 1989, of which foreign loans were $US 42.5 million, foreign direct investment was $US 37.57 million, and other foreign investment was $US 6.9 million.

Out of 110 foreign direct investment projects, 102 were joint ventures, 1 was contractual joint venture, and 7 were solely foreign-funded enterprises. In terms of sectors, 54 projects were in light industry, 18 in machinery, 12 in textiles, 12 in electronics, 6 in building materials, 5 in chemical industry, 1 in agriculture, 1 in pharmaceuticals, and 1 in metallurgy.

The investors were mainly from 9 countries and regions including Hong Kong with 71 projects in the amount of $US 51.12 million, Taiwan Province with 15 projects in the amount of $US 13.63 million, Panama with 1 project in the amount of $US 10.5 million, the United States with 11 project in the amount of $US 7.83 million, Japan with 6 projects in the amount of $US 1.37 million, and the United Kingdom with 1 project in the amount of $US 1.34 million.

Up to the end of 1990,158 foreign-funded enterprises had been put into production and turned out RMB830 million yuan. The revenue of the goods sold was RMB774 million yuan and the foreign exchange generated through export were $US 45.34 million, keeping a balance of the income and the expenditure.

Technology import and export

64 contracts on import of technology and equipment were signed, the contractual value being $US 58.82 million, an increase of 2.91 per cent over $US 57.16 million of 1989; actual use of foreign funds recorded $US 87.13 million, an increase of 62.78 per cent over $US 53.53 million of 1989. The importation was mainly from Japan, Germany, the United States, Italy, and Hong Kong, etc. covering textiles, light industrial products, machinery, electronics, and pharmaceutics, etc.

Foreign economic cooperation

14 contracts on undertaking contracting projects and providing labour service abroad were signed, contract value being $US 8.5 million, up 15.42 per cent over, $US 7.36 million of 1989; business turnover was $US 6.34 million, 35.41 per cent less than $US 9.81 million of the previous year. 83 people were sent abroad to provide labour service in the year, and by the end of the year, 188 people were working in Bangladesh, Congo, Mali, Nepal, Bolivia, Ethiopia, Canada, the United States, Hungary, Kuwait, and the United Arab Emirates, etc. One foreign aid project in Ethiopia was undertaken. The following foreign aid projects were completed in 1990: Bangladesh Aquatic Water Conservancy Project, Nepal Reclamation Area, Bolivia Water Ditch Repairing Project, two Water Supply Projects in Congo. 33 people were sent abroad to provide aid in the year and 85 people were

working by the end of the year.

One grant project from Australia was accepted in the amount of $US 331,500 which was used to investigate the cases of fluorine poison in Cangzhou and the research on how to prevent and cure it.

Two productive enterprises were set up in Australia and the United States, and the Chinese investment was amounted to $US 700,000.

10. HEILONGJIANG PROVINCE

Heilongjiang

Lying in the northernmost part of China, Heilongjiang Province bordering Siberia is the sixth largest province in China. It has an area of 454,600 sq km, and according to a year-end count, the population was 34,424,000 in 1989. China's largest oil field, the Daqing field, is located in this province that abounds in coal, petroleum, graphite, gold, uranium and other minerals. Heilongjiang is the most heavily forested province in China with a timber reserve of 1,485 million cubic metres. The province is a producer of wheat, sorghum, soya bean and other crops. The provincial city is Harbin, a river port and railway hub on the Songhuajiang.

Foreign trade

In 1990, Heilongjiang's total volume of export and import was amounted to $US 1.49248 billion, an increase of 5.65 per cent against $US 1.41273 billion in 1989.

The total value of commodities purchased for export was RMB 6.66 billion yuan, up 5.71 per cent over RMB 6.3 billion in 1989.

The export value reached $US 1.08659 billion with a growth of 5.77 per cent over $US 1.02732 billion in 1989 accounting 8.6 per cent of the Province's GNP, and 2.09 per cent of China's total export, and ranking the 12th in the country.

The composition of export commodities was agricultural and sideline products amounting to $US 380.91 million, accounting for 35.06 per cent of the total export value; light industrial products $US 427.37 million, 39.33 per cent; and heavy industrial products $US 278.31 million, 25.61 per cent. Compared with that in 1989, the proportion of agricultural and sideline products in export commodities dropped by 19.44 percentage points, while that of light industrial products and heavy industrial products rose by 11.03 percentage points and 8.41 percentage points respectively. By SITC system, primary products valued $US 533.27 million, taking up 49.08 per cent of the total export, and manufactured industrial products, $US 553.32 million, 50.92 per cent.

There were 18 commodities each with export value over $US 10 million, which include soybean, corn, bean expellers, garments, fine linen cloth, tools, canned beef, frozen beef, beet pulp, cotton fabrics, cotton/polyester yarn, radio recorder sets, industrial bearings, ship overhaul, down garments, etc. The combined export value of these commodities reached $US 530.31 million, accounting for 48.80 per cent of the total export. There were 20 commodities each with export value of $US 5-10 million, which include embroidered articles, cotton polyester, blended fabrics, fur garments, woolen blankets, cotton rubber shoes, paraffin wax, sanitary chopsticks, wool knitwear, bristles, automobiles, tyres, aluminum products, crystalline flake graphite, broken soybean cakes, etc. The combined export value of these commodities amounted to $US 137.77 million, accounting for 12.68 per cent of the total export.

The commodities were exported to 87 countries and regions. The countries and regions to which the export value exceeding $US 10 million include Hong Kong, Japan, the former Soviet Union, Republic of Korea, Thailand, Malaysia, Singapore, Indonesia, Germany, and the United States. The combined value of export to the above-mentioned countries and regions was $US 933.69 million, 85.93 per cent of the total export, of which the former Soviet Union was $US 358.95 million, taking up 33.03 per cent of the Province's total export; Hong Kong, $US 175.09 million, 16.11 per cent; Japan, $US 172.09 million, 15.84 per cent; and Republic of Korea, $US 76.3 million, 7.02 per cent.

The total import value was $US 405.89 million, 5.31 per cent more than $US 385.41 million in 1989. Of the import commodities, means of production valued $US 366.31 million, accounting for 90.25 per cent of the total, and means of livelihood $US 39.58 million, 9.75 per cent. The main import commodities include machinery equipment, raw materials for industry, agricultural goods, and means of livelihood from 29 countries and regions, such as the former Soviet Union, Japan, the United States, Republic of Korea, and Hong Kong. The countries and regions from which the commodities were imported with the value over $US 5 million include Hong Kong, Japan, Republic of Korea, the former Soviet Union, and the United States. Among them, the former Soviet Union took up $US 282.52 million, 69.61 per cent of the total import; Japan, $US 41.06 million, 10.12 per cent; and Hong Kong $US 34.07 million, 8.39 per cent.

In 1990, the total border trade with the former Soviet Union reached SF179.85 million, increased by 26.19 per cent over SF 570.47 million in 1989. Among the total, import valued SF 375.88 million, 60.61 per cent more than SF 234.03 million in 1989; and export valued SF 343.97 million, 2.24 per cent more than SF 336.44 million in 1989. The major import commodities include chemical fertilizer, timber, steel products, cement, aquatic products, medical care articles, chemical products, garments, textiles, furnitures, etc. The export commodities were light industrial products, textiles, farm and sideline products, machinery equipment, transportation tool, building materials, electromechanical instruments, etc. 117 economic and technological cooperation contracts were signed upon barter trade, with a total value of SF 232.79 million. Among these contracts, 43 were actually fulfilled with a value of SF 26.15 million, including 22 contracts for vegetable planting, 10 for construction, and 11 for others. 10,957 labour service personnel were sent abroad. By the end of 1990, the province had established economic and trade relations with about 600 former customers from 31 States in 9 Republics, 5 Frontier Regions and 6 Autonomous Republics in the former Soviet Union.

Utilization of foreign capital

86 contracts on using foreign capital were signed and approved with the contract value of $US 77.89 million, down 11.35 per cent against $US 87.86 million in 1989. Among them, 2 contracts were of foreign loans, valuing $US 46.83 million; 76 contracts were of foreign direct investment, valuing $US 27.13 million; and 8 contracts were of other foreign investment, valuing $US 3.93 million. The actual use of foreign capital was $US 63.2 million, down 17.68 per cent against $US 76.77 million in 1989. Of this, $US 28.69 million was of foreign loans, $US 30.58 million of foreign direct investment, and $US 3.39 million of other foreign investment.

Out of 76 foreign direct investment projects, 59 were equity joint ventures, 2 were contractual joint ventures, and 15 were wholly foreign-owned enterprises. Classified by trade, 63 were in industry, 7 were in catering service, and 4 were in agriculture. One each in communication and transportation, and TV and broadcasting. The investors mainly came from 16 countries including the former Soviet Union, the United States, Japan, Canada, Singapore, Thailand, the Republic of Korea. Taiwan Province, and Hong Kong. 43 projects were from Hong Kong with foreign investment of $US 10.99 million; 2 from Thailand with $US 3.09 million; 4 from Taiwan Province with $US 3.09 million; and 9 from the Republic of Korea with $US 1.49 million.

Technology import and export

1 contract was signed for importing technical knowhow and equipment of formaldehyde production line from the United States, valuing $US 2.55 million.

7 contracts for technology export were signed with a total value of $US 7.96 million, 24.76 per cent increase over $US 6.38 million in 1989.

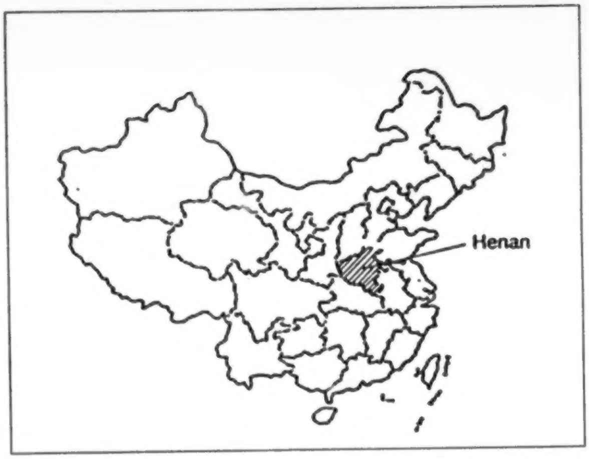
Foreign economic cooperation

The Province signed 6 contracts on contracting engineering projects with the former Soviet Union, involving contract value of $US 11.91 million; 7 contracts on labour service cooperation with the former Soviet Union, Italy, and Equatorial Guinea involving contract value of $US 5.01 million. 1,604 engineers, technicians and labour service personnel were sent abroad in 1990.

11. HENAN PROVINCE

Lying on both banks of the Yellow River west of Shandong Province, Henan is one of China's banner foodgrain and cotton producers. It has 7 million hectares of land growing tobacco, jute, soya bean, peanut and other crops. The province has big deposits of coal, petroleum, natural gas, aluminium, gold, silver, molybdenum, perlite and other minerals.

Provincial capital: Zhengzhou



Foreign trade

The total export and import value of Henan Province in 1990 was $US 979.71 million, 8.74 per cent increase over the $US 900.96 million in 1989.

The purchase value of export commodities was $US 5.35223 million, 14.73 per cent increase over the $US 4.66509 million of 1989.

The total export value was $US 866.89 million, 5.58 per cent increase over the $US 818.97 million in 1989, 4.69 per cent of the GNP of the province and 1.68 per cent of the total value of national exportation.

The composition of the export commodities was: agricultural and sideline products at $US 315.49 million, 36.39 per cent of the total export value; light industrial products at $US 372 million, 42.91 per cent of the total; heavy industrial products at $US 179.4 million, 20.7 per cent of the total. Compared with 1989,the proportion of agricultural and sideline products increased by 0.26 percentage points, light industrial products decreased by 2.7 percentage points, and heavy industrial products increased by 2.44 percentage points. According to the standard categories of international trade, primary products were at $US 419.11 million, 48.35 per cent of the total export value, 1.27 percentage points more than the previous year; the industrial manufactured products at $US 447.78 million, 51.65 per cent of the total, 1.27 percentage points less.

The export market was further expanded. Commodities were sold in 100 countries and regions, 6 countries more than that of 1989. According to the regional breakdown, countries in Asia were at $US 506.67 million, 58.45 per cent of the total export value; EC countries at $US 107.49 million, 12.40 per cent of the total; the former Soviet Union and Eastern European countries at $US 124.27 million, 14.34 per cent of the total; North American countries at $US 56.78 million, 6.55 per cent of the total; South American countries at $US 7.4 million, the oceanic countries at $US 5 million, and African countries at $US 3.41 million.

Major markets each with export value above $US 10 million included 14 countries and regions, in which Hong Kong was at $US 305.37 million, 35.22 per cent of the total export value; Japan at $US 96.3 million, 11.11 per cent of the total; the former Soviet Union at $US 77.68 million, 8.96 per cent of the total; the United States at $US 49.46 million, 5.71 per cent of the total.

Goods imported were at $US 112.82 million, 37.6 per cent increase over the $US 81.99 million of 1989.

Composition of the import commodities was: means of livelihood at $US 40.13 million, 35.57 per cent of total import value; means of production at $US 72.69 million, 64.43 per cent of the total. According to the standard categories of international trade, primary products were at $US 64.87 million, 57.5 per cent of the total import value; industrial manufactured products at $US 47.95 million, 42.5 per cent of the total. Major commodities included cigarette auxiliaries, fertilizer, complete plant, chemical auxiliaries, animal oils and vegetable oils.

The imported goods were from 21 countries and regions, including mainly: Hong Kong at $US 48.18 million, 42.71 per cent of the total import value; the United States at $US 22.04 million, 19.54 per cent of the total; Germany at $US 5.52 million, 4.89 per cent of the total; Norway at $US 4.11 million, 3.64 per cent of the total.

Utilization of foreign capital

54 new contracts on utilizing foreign capital were signed with approval, with the total contracted value of foreign investment at $US 24.3 million, 90.04 per cent less than the $US 244 million of 1989. Among the contracts, 1 was foreign loan project with the contracted value at $US 2.37 million; 55 were foreign direct investment with the investment value at $US 21.06 million; 3 were other foreign investment with the contracted value at $US 870,000. The actually-used of foreign capital in the year was at $US 13.73 million, 70.19 per cent less than that of 1989.

Among the 50 projects of foreign direct investment, 39 were joint ventures, with the contracted value of foreign investment at $US 13.1 million; 1 contractual joint venture, with the contracted value at $US 2.54 million, 10 solely foreign-owned projects, with the total contracted value at $US 5.42 million. 49 of these projects were of productive type, in which: 3 were in the field of textile industry, 5 in electronics and communication, and 6 in chemical industry.

The foreign investors were from 7 countries and regions. Among them, businessmen from Hong Kong invested in 25 projects, with the total contracted value at $US 9.33 million; Taiwan Province in 12 projects at $US 4.04 million; Japan in 4 projects at $US 3.07 million; the United States in 6 projects at $US 2.94 million.

13 foreign investment enterprises went into production in the year, playing a positive role for the economic development for the province. For example, the Zhongyuan Fertilizer Factory financed by the World Bank Loan, after it was launched into production, the production capacity of synthetic ammonia in the factory increased by 400,000 tons. The Anyang Color Kinescope Glass Case Factory, jointly owned by the Chinese side and foreign businessmen, has already reached the annual production capacity of 4.6 million sets. During the year, the exportation of products by the foreign investment enterprises reached $US 20.06 million.

Technology import and export

In 1990,$US 8.28 million in foreign exchange was used for the importation of technology and equipment, 45.92 per cent less than the $US 15.31 million of the previous year. 38 contracts were signed with 15 countries and regions for the exportation of technology, with the total contracted value at $US 13.98 million, 6.68 times increase over the $US 1.82 million of 1989. Among the contracts, one was on the exportation of technology, with the contracted value at $US 9.96 million; 25 were on the exportation of technical products, with the contracted value at $US 4.02 million.

Foreign economic cooperation

38 contracts were signed for contacting engineering projects and labour service within the year, with the contracted value at $US 25.4 million, 10.15 per cent more than the $US 23.06 million of 1989. Among them, 24 were of contracted projects, with a total value of $US 22.81 million; 14 were of labour service, with a total value of $US 2.59 million. The business turnover completed was $US 24.67 million, 2.68 per cent less than the $US 25.35 million of the previous year. 870 technical and engineering and labour service personnel were dispatched abroad in the year. By the end of the year, there were 1,266 people working abroad in 34 countries and regions. Major projects included: Housing Estate Development Project in Hong Kong, Power Transmission Line Project in Pakistan, and Banjul City Water Supply Project in Gambia.

7 foreign aid projects were undertaken within the year, including power station rehabilitation, highway, and water conservancy projects in Guinea, Senegal and Nepal, as well as technical cooperation projects in culture and sports. 3 of the projects have already been completed.

From the United Nations agencies like UNFPA and UNICEF, $US 3.58 million worth of assistance was received for the training of primary and kindergarten teachers, and health protection projects for women and children.

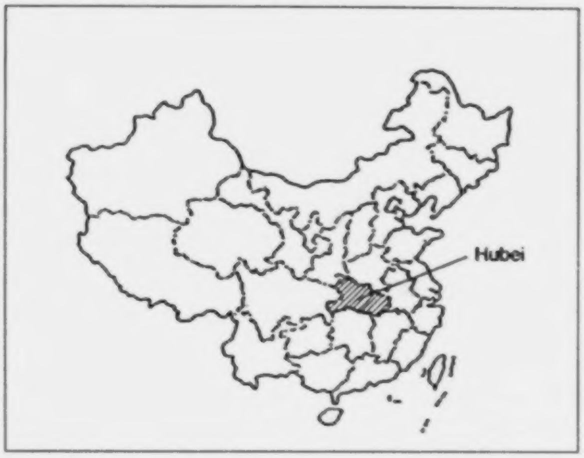
One chemical production enterprise was approved to be established in Germany, with the investment from the Chinese side at $US 0.81 million.

Table 17. Commodities each with export value above $US 5 million

Value/category	*Export commodities*	*Export value ($US million)*	*Percentage of the total export value*
Above $US 50 million, 1 item	Cotton	68.19	7.87
Above $US 10 million, 17 items	Cotton cloth and its garments, cotton polyester cloth, cotton manufactured goods, cotton knitwear, cotton yarn, embroidered articles, feed stuffs, live pig, maize, goat skin, frozen beef, coal, rolling bearings, steel products, pottery and ceramics, shoes.	429.79	49.58
Above $US 5 million, 15 items	Flue-cured tobacco, garlic, silk garments, silk, leather products, canned food, bee honey, carpet, down filled garments, bauxite, casings, soy beans, timber, chemical fiber yarn, paper & pulp.	101.48	11.71

12. HUBEI PROVINCE

Known as a land of lakes, and with the important Yangtze port of Wuhan as its capital, Hubei Province is a major producer of rice and fish in China. It covers an area of 185,900 sq km and has a population of 52,238,900 made up of people of the Han, Tujia, Hui, Miao and Manchu nationalities. Its steel plant in Wuhan is one of the biggest in the country, and located in Shiyan in northwestern Hubei is the No.2 Automotive Works, one of the largest in China.



Foreign trade

In 1990, Hubei's total export and import value stood at $US 1.18968 billion, down by 4.46 per cent from $US 1.24525 billion of 1989.

Hubei's purchase for export totalled RMB5.469 billion yuan, up 3.17 per cent over RMB5.301 billion yuan in 1989.

The total export value increased by 4.40 per cent to $US 1.07180 billion from $US 1.02662 million last year, accounting for 7.18 per cent of the provincial GNP and 2.06 per cent of the nation's total export value.

The export commodities and their value concluded in 1990 are as follows: $US 183.93 million for the export of agricultural and sideline products, 17.16 per cent of the total export; $US 707.22 million for light industrial products, 65.98 per cent of the total; $US 180.65 million for heavy industrial products, 16.86 per cent of the total; according to the classification of international trade standard, $US 274.43 million for primary products, accounting for 25.6 per cent of the total; $US 797.37 million for finished industrial products, 74.4 per cent of the total.

There were 30 kinds of major export commodities each with an export value over $US 5 million, and their export amounted to $US 471.14 million, 43.96 per cent of the total export.

The commodities were exported to 144 countries and regions including Hong Kong, Japan, the Soviet Union, the United States, Germany, Singapore, among which the export to Hong Kong reached $US 478.2 million, taking up 44.62 per cent of the total; Japan, $US 92.56 million, 8.64 per cent; the former Soviet Union, $US 83.83 million, 7.82 per cent; and the United States, $US 61.18 million, 5.71 per cent; Germany, $US 34.14 million, 3.19 per cent; and Singapore, $US 19.34 million, 1.8 per cent.

The import value totalled $US 117.88 million, down by 46.08 per cent from $US 218.63 million in 1989, of which $US 105.23 million was for means of production, 89.27 per cent of the total, and $US 12.65 million for means of subsistence, 10.73 per cent. Among the major imports were $US 16.28 million for fabrics; $US 8.154 million for tobacco and cigarette auxiliaries; $US 6.11 million for animal oils and vegetable oils; $US 6.06 million for western medicine; $US 6.01 million for chemical raw materials; $US 4.426 million for synthetic fiber; $US 3.02 million for rubber and its products; $US 2.96 million for TV receivers and sound equipment; $US 2.15 million for paper; $US 1.99 million for telecommunication equipment; $US 1.34 million for embroidered articles raw materials. The total value was $US 58.50 million, accounting for 49.63 per cent of the total value of importation.

The main import markets were Hong Kong, the United States, Japan, Singapore, Macau, Germany, the United Kingdom, etc. of which, with $US 67.75 million import from Hong Kong, taking up 57.47 per cent of the total; $US 13.98 million from the United States, 11.86 per cent; and $US 12.40 million from Japan, 10.52 per cent.

Utilization of foreign capital

185 contracts on utilizing foreign capital were signed and approved with a contract value of foreign investment standing at $US 61.73 million, a drop of 55.98 per cent from $US 140.22 million of 1989. Of the contracts, 3 were on foreign loans involving $US 11.26 million; 99 on foreign direct investment with $US 39.47 million; and $US 11.00 million of other foreign investment.

Out of the 99 projects of foreign direct investment, 75 were equity joint ventures, 7 were contractual joint ventures, and 17 were wholly foreign-owned enterprises, including 87 productive projects and 12 non-production projects. By the end of 1990, 284 were foreign direct investment enterprises, among which 242 were productive projects, and 42 were non-production projects. Foreign investment mainly comes from Hong Kong, the United States, Taiwan Province, the Netherlands, Macau, Australia, Singapore, and Germany.

In 1990, the foreign-invested enterprises earned $US 25.30 million from their export, 56.37 per cent up against $US 16.18 million in 1989.

Technology Import and export

27 contracts for import of technology and equipment were signed with a contract value standing at $US 39.1515 million, down by 34.15 per cent from 1989. The imports mainly came from the United States, Japan, Hong Kong, Belgium, Germany, Republic of Korea covering machinery, electronic industries, and textiles as well as light and chemical industries.

1 contract was signed for the export of China's technology, totalling $US 3 million.

Foreign Economic Cooperation

25 contracts for foreign projects and labour service cooperation were concluded with a contract value of $US 180 million, 4.80 times up against the amount of $US 31.06 million in 1989. The turnover of the year was $US 79.80 million, increasing by 11.84 per cent over $US 71.35 million of 1989, and a total of 2,658 labour service personnel were working abroad for these projects. The number of experts working abroad by the end of the year stood at 98. 12 aid projects were undertaken. Recipient countries include Nepal, Algeria, Cameroon, Thailand, Mozambique, covering highway, traffic, medicine and health as well as agricultural science and technology. The number of experts working abroad by the end of the year stood at 426.

11 projects involving aid from the United Nations Population Fund and UNICEF were accepted, amounting to $US 34.91 million, which will be completed within 5 years of 1990-1994.

In the year, 1 enterprise was established abroad, namely International Leather Processing Co. Ltd. (Thailand) with Chines investment of $US 720,000. By the end of 1990,11 enterprises were established abroad with a contract value of $US 10.17 million and Chinese investment of $US 4.06 million. The main projects include Australia Hao Di-Chinese Investment Co. Ltd., America CHB Co. Ltd., Macau Jianxinglong Enterprise Co. Ltd., with total profit of $US 4.37 million.

Table 18. Commodities each with export value exceeding $US 5 million

Exported commodities classified by value	*Commodity name*	*Export value ($US million)*	*Percentage of the total*
Over $US 30 million (5 items)	Cotton cloth, cotton garments, cotton, cotton polyester fabrics, live pig.	210.93	19.68
$US 10-30 million (10 items)	Cigarettes, cotton yarn, bath towels, polyester garments, singlets & vests, ramie garments, vegetable feedstuffs, billet, steel plate, cotton ramie blended yarn.	156.43	14.60
$US 5-10 million (15 items)	Fresh eggs, tea, flue-cured tobacco, gallnut, raw lacquer, bristles, feather down garments, ramie yarn, thermos, sport shoes, tyres, industrial bearing, sesame, machinery, bean expellers.	103.78	9.68

13. HUNAN PROVINCE

Hunan is situated in the north of Guangdong Province and south of the Yangtze River. It has an area of 210,000 sq km and a population of 60,094,000 made up of the Han, Tujia, Miao, Dong, Yao and Zhuang nationalities. The provincial capital is Changsha, a city on the Beijing-Guangzhou Railway, the nation's major north-south trunk line. The province is quite rich in natural resources, and its antimony reserves are the biggest in the world and hydropower resources are estimated at more than 15 million kw.

Foreign trade

In 1990, the total value of export and import of Hunan Province was $US 935. 48 million, 4.56 per cent increase over the $US 894.72 million of 1989.

The total purchase value of export commodities was RMB 4.11 billion yuan, 12.70 per cent increase over RMB 3.647 billion yuan of 1989.

Total value of exportation was $US 805.52 million, 21.02 per cent more than $US 665.63 million of 1989, 5.87 per cent of the GNP of the province and 1.56 per cent of the total value of national exportation.

Among the export commodities: agricultural and sideline products accounted for $US 161.01 million, 19.99 per cent of the total value of exportation, 2.43 percentage points less than 1989; light industrial products accounted for $US 369.35 million, 45.85 per cent of the total, 4.06 percentage points more; heavy industrial products accounted for $US 275.16 million, 34.16 per cent of the total, 1.63 percentage points less. According to the standard categories of international trade: primary products accounted for $US 254.29 million, 31.57 per cent of the total amount of exportation, 3.2 percentage points less than 1989; manufactured products accounted for $US 551.23 million, 68.43 per cent of the total, 3.2 percentage points more.

Commodities each with export value above $US 3 million were 53 items, with the total export value at $US 610.73 million, 75.82 per cent of the total value of exportation.

Export commodities were sold to 108 countries and regions, mainly to the five major markets of Hong Kong and Macau, Japan, the United States, EC, and the former Soviet Union and Eastern Europe. Export value amounted to $US 654.91 million, 81.30 per cent of the total.

The value of import goods totaled $US 129.96 million, 43.27 per cent less than $US 229.09 million of 1989.

Table 19. Commodities each with the export value above $US 5 million

Amount/category	*Commodities*	*Export value ($US million)*	*Percentage of total export value*
Over $US 10 million (16 items)	Live pig, ramie & ramie products, firecrackers & fireworks, pottery, antimony products, garments, tea, frozen pork, leather & its products, iron alloy, feed stuffs, feather down & its products, hard alloy, cotton cloth, chemical fiber, blended cloth, shoes.	402.82	50.01
$US 5-10 million (21 items)	Rice lithopone, light diesel oil, steel products, tools, cotton knitwear, industrial bearings, metal products, cotton manufactured products, tungsten ore, ammonium paratungstate, canned food, suckling pigs, eggs, silk & silk products, lead, silicon, foundry products, mini complete plant, hand embroidered articles.	150.21	18.65

Table 20. Major markets each with the export value above $US 20 million

Country/region	*Export value ($US million)*	*Percentage of the total*
Hong Kong and Macau	558.03	44.45
The United States	71.55	8.88
Japan	68.47	8.50
The former Soviet Union	38.77	4.81
Germany	36.69	4.55
Thailand	20.72	2.57

The composition of import commodities was: means of production, valuing $US 117.61 million, accounting for 90.5 per cent of the total import value; means of subsistence, $US 12.35 million, 9.5 per cent. Categorized according to standard of international trade, primary products were $US 37.94 million, 29.19 per cent of the total import value; and industrial manufactured products, were $US 92.02 million, 70.81 per cent.

Commodities each with the import value above $US 5 million were of 8 items, i.e. paper, cigarette auxiliaries, light industrial machinery, urea, complete plant & technical import, metals, minerals, crude oil, industrial chemical raw materials etc., valuing $US 84.70 million, 65.17 per cent of the total import value.

The import commodities came from major import markets in 19 countries and regions: Hong Kong and Macau at $US 65.71 million, accounting for 50.56 per cent of the total import value; Italy at $US 16.37 million, 12.60 per cent; Japan at $US 8.34 million, 6.42 per cent; the United States at $US 5.48 million, 4.22 per cent; Australia at $US 4.35 million, 3.35 per cent; and Indonesia at $US 3.80 million, 2.92 per cent.

Utilization of foreign capital

In 1990, 127 contracts on utilizing foreign capital had been signed with approval, with the total contracted value at $US 49.86 million, 67.08 per cent less than the $US 151.46 million of 1989. Among the contracts signed, 1 was foreign loan project, with the contracted value at $US 8.75 million; 45 were foreign direct investment projects, with contracted value of foreign investment at 26.78 million; and 81 were other foreign investment projects, with foreign investment value at $US 14.33 million.

The actually-used foreign investment was $US 177.80 million, 45.29 per cent more than $US 122.38 million of 1989,in which $US 158.75 million were foreign loan; $US 11.16 million were foreign direct investment; and $US 7.89 million were other investment.

Among the 45 projects of foreign direct investment, 32 were joint ventures; 7 were contractual joint ventures; and 6 were solely foreign-owned projects. They can be divided into 44 productive projects and 1 non-productive project. Categorized according to the field of activities, 6 were of electronics and machinery and garments, 3 each of metallurgy, transportation, food, light industry and textile, 2 each of chemicals and geology and minerals, one each of agriculture, construction materials, biology, medicine and service, and 3 of other fields.

Foreign direct investment came from 6 countries and regions, of which: Hong Kong accounted for $US 13.96 million, Taiwan Province-$US 6.42 million, Belgium-$US 4.60 million, Japan-$US 1.04 million, Australia-$US 0.4 million, and the United States-$US 0.36 million.

In 1990, foreign investment enterprises already in business operation had earned $US 24.55 million, realizing a profit of RMB 35.99 million yuan.

Technology import and export

17 contracts on the importation of technology were signed with approval in 1990, with the contracted value at $US 15.67 million, 42.14 per cent less than the $US 27.0802 million of 1989. The actually-used amount of foreign exchange were $US 8 million, 58.22 per cent less than the $US 19.15 million of 1989.

The introduced projects mainly came from Japan, the United States, Italy, Switzerland, Germany and other developed countries. These projects were mainly in fields of tobacco industry and post and telecommunications.

16 contracts were signed for the exportation of technology, with the total contracted value at $US 25.40 million, 120 per cent over the $US 11.67 million of 1989. The actual foreign exchange earnings were $US 6.41 million. The export of technology was mainly composed of complete plant and key equipment, exported to the countries and regions like Bangladesh, Pakistan, Thailand and Hong Kong.

Foreign economic cooperation

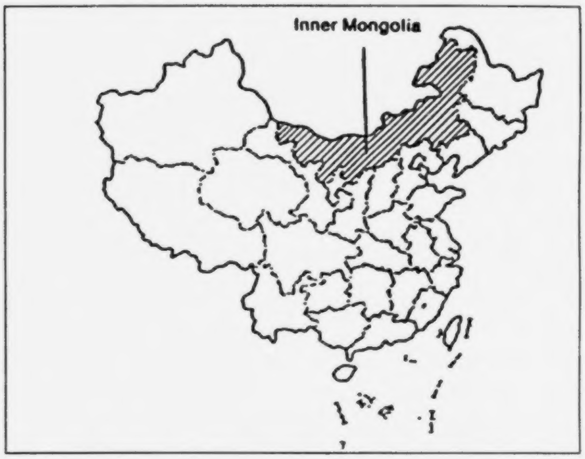
87 contracts for projects and labour service abroad were signed with a total value of $US 13 million, 47.14 per cent more than the $US 8.84 million of 1989. Business turnover completed was $US 18.79 million, 2.3 times more than the $US 5.66 million of 1989. 309 labour service personnel were dispatched abroad and the number reached 623 by the end of the year. The projects were located in countries and regions like Thailand, Ghana, Burkina Faso, Zaire, Liberia and the United States. Fields of cooperation mainly included building, highway, bridge, machinery, electronics, non-ferrous metals, metallurgy, textile, tailoring, painting papering with qigong, embroidery, weaving with bamboo, grass and willow twig, and food and drink services.

In 1990, 10 external aid projects were undertaken for their continuation: 2 medical teams were sent abroad; 220 personnel were dispatched. By the end of the year, the number of people sent to work abroad was 284. The number of recipient countries was 12. Four projects of technical cooperation were completed in the year.

19 United Nations and bilateral aid projects were received, with a total worth of $US 26.2165 million. They mainly included: Comprehensive Agricultural Development of Wuyi Mountainous Region, Development of Balanced Fertilizer Spraying Technology, Supervision of Children's Nutrition, Training for Women Development, Training of Teachers, etc.

In 1990, overseas investment enterprises were established, one each in Germany and United Arab Emirates, with the total investment from the Chinese side at $US 0.74 million. By the end of 1990, 37 overseas enterprises were established in 15 countries and regions, with the total investment value from the Chinese side at $US 8.36 million and the accumulated profits at $US 12.5973 million.

14. INNER MONGOLIA AUTONOMOUS REGION



Lying in China's northern frontier areas, Inner Mongolia occupies an area of 1.183 million sq km, or 12.3 per cent of China's total territory. It has a 4,200 km common boundary with the former Soviet Union and the Mongolian People's Republic (MPR). The autonomous region was established on 1 May, 1947 – two years before the founding of the Chinese People's Republic.

Eastern Inner Mongolia has the second biggest timber reserve in China. The Hulun Buir Grassland in central Inner Mongolia is one of the nation's five biggest livestock-raising regions. Its total verified coal reserves are estimated at more than 200 billion tonnes, accounting for 1/4 of the national total. It has rich deposits of petroleum, iron, copper, lead, zinc, gold, silver, rare earth and other minerals.

The autonomous region's capital is Hohhot, a rising city with a well developed woolen industry.

Inner Mongolia has a population is 21,222,300, comprising members of the Mongolian, Han, Manchu, Hui and other nationalities. The Mongol population is 3,073,000, making up for 14.4 per cent of the total population (21,222,300).

Foreign trade

In 1990, the total export and import value of the Inner Mongolia Autonomous Region amounted to $US 465 million, an increase of 7.41 per cent compared with $US 432.92 million in 1989.

The purchasing value for export commodities was RMB 1,731.84 million yuan, a decrease of 6.27 per cent from 1,847.71 million yuan in 1989.

The export value totalled $US 324.64 million, a decrease of 3.47 per cent from $US 336.3 million in 1989, accounting for 5.47 per cent of the Regions' GNP and 0.62 per cent of the national total export.

The structure of export commodities was specified as follows: agricultural and sideline products amounted to $US 101.61 million, accounting for 31.30 per cent of the total; light industrial products $US 146.64 million, accounting for 45.17 per cent; heavy industrial products $US 76.39 million, making up 23.53 per cent. Compared with that of 1989, the export value of agricultural and sideline products decreased by 8.57 percentage points, light industrial products increased by 7.94 percentage points, heavy industrial products increased by 0.63 percentage points. According to the specification of the international trade standard, the export value of primary products amounted to $US 123.33 million, accounting for 37.99 per cent of the total; that of industrial manufactured products $US 201.31 million, making up 62.01 per cent.

There were 12 items of commodities, the export value of each item exceeded $US 5 million respectively. They earned $US 120.05 million, representing 36.98 per cent of the total. Of the 12 items commodities each with export value over $US 10 million were: dehaired goatwool $US 27.4 million, accounting for 8.44 per cent of the total; frozen beef $US 12.37 million, accounting for 3.81 per cent; carpet $US 12.05 million, accounting for 3.71 per cent, and soybean $US 10.55 million, accounting for 3.25 per cent.

The export commodities were sold to 61 countries and regions. There were 15 countries and regions to which the export value was more than $US 2 million.

Table 21. List of the main export markets

Country/region	*Export value ($US million)*	*Percentage of the total export*
Former Soviet Union	98.53	30.35
Japan	59.41	18.30
Hong Kong	52.34	16.12
United Kingdom	24.69	7.61
United States	12.74	3.92
Italy	10.62	3.27
Mongolia	9.34	2.88
France	5.43	1.67
Germany	5.27	1.62
Switzerland	3.88	1.20
Total	**282.25**	**86.94**

The total import value reached $US 140.36 million, an increase of 45.27 per cent over $US 96.62 million of 1989. The structure of import commodities was stated as follows: the import of means of production amounted to $US 122.74 million, accounting for 87.45 per cent of the total, a decrease of 2.38 percentage points compared with that of 1989; means of livelihood reached $US 17.62 million, accounting for 12.55 per cent of the total, an increase of 2.38 percentage points in comparison with that of 1989.

The major import goods were chemical fertilizer with the value of $US 54.73 million, accounting for 38.99 per cent of the total; steel products $US 10.15 million, 7.23 per cent; timber $US 9.6 million, 6.84 per cent; non-ferrous metal $US 6.66 million, 4.74 per cent; electronic computers $US 4.03 million, 2.87 per cent; electronic components $US 3.6 million, 2.56 per cent; cellulose fibre $US 2.68 million, 1.91 per cent; medicines and pharmaceutical raw materials $US 2.51 million, 1.79 per cent.

The goods were mainly imported from 22 countries and regions.

Table 22. List of the main import markets

Country/region	*Export value ($US million)*	*Percentage of total import*
Former Soviet Union	85.00	60.56
United States	13.61	9.70
Japan	8.13	5.79
Hong Kong	7.97	5.68
Mongolia	7.67	5.46
Singapore	4.92	3.51
Taiwan Province	2.66	1.90
Thailand	2.38	1.70
Hungary	2.07	1.47
United Kingdom	1.85	1.32
Total	**136.26**	**97.08**

The total import and export value of the border trade with the former Soviet Union was SF 230.29 million, an increase of 28.01 per cent over SF 179.90 million in 1989. Of the total, export value reached SF 105.18 million, import value was SF 125.11 million. The main export commodities were fruits, various kinds of canned meats, frozen beef, garments, down filled products, cotton knitwear, vacuum flasks etc. the main import commodities were chemical fertilizer, steel products, timber, chemical raw materials, non-ferrous metals, agricultural and animal husbandry machinery etc.

The total import and export value of the border trade with the People's Republic of Mongolia amounted to SF 26.56 million, an increase of 59.62 per cent over SF 16.64 million in 1989. Of the total, export value was SF 10.47 million; import value reached SF 16.09 million. Major export commodities were nationality goods, computers, canned goods, silk, garments, shoes, articles of daily use etc. Major import commodities were chemical fertilizer, timber, woolen overcoat, waste metals etc.

Utilization of foreign capital

14 contracts of using foreign capital were approved with the contract value of $US 19.46 million, an increase of 5.19 per cent over $US 18.50 million in 1989. All these were foreign direct investment projects. Actually used foreign investments were $US 10.64 million, an increase of 128 per cent over $US 4.67 million in 1989.

Among 14 foreign direct-funded projects, 8 were equity joint ventures, 3 were contractual joint ventures, 3 were exclusively foreign-owned enterprises. Of the total, 13 were productive enterprises and 1 was non-productive. The fields covered were as follows: 6 projects in garment processing, 2 in chemical industry, and 1 each in animal husbandry, textile industry, building materials, electronics, automobile maintenance and public catering trade respectively.

Classified by regions, 8 projects were from Hong Kong with the contract foreign investment value reaching $US 11.20 million; 1 from Singapore with the value of $US 4.95 million; 1 from Taiwan Province with the value of $US 1.83 million; 1 from the former Soviet Union with the value of $US 1.26 million; 1 from Macau with the value of $US 130,000; 1 from Japan with the value of $US 50,000; and 1 from the United States with the value of $US 40,000.

The foreign exchange earning of enterprises with foreign investment was $US 14.50 million in 1990.

Technology import and export

7 contracts were signed to introduce technology and equipments with contract value of $US 4.1312 million, a decrease of 76.87 per cent from $US 17.86 million in 1989. The actual expense of foreign exchanges totalled $US 5.17 million. a decrease of 21.07 per cent from $US 6.55 million in 1989. The projects introduced came from Japan, the United States, Taiwan Province, Germany, France and the United Kingdom. The main technology and equipments introduced were: the equipment for technical transformation of small-sized oxidic film resistance and wool weaver warping, brick production lines as well as key equipment for the production of leather and high grade cosmetics.

1 project was put into operation in the year. The increased output value amounted to RMB 12.77 million yuan. Profit and tax was RMB 5.01 million yuan, and export earnings were $US 400,000. 1 product was newly developed.

Foreign economic cooperation

59 contracts for foreign contracting projects and labour service were signed with the contract value of $US 29.7066 million, a decrease of 45.73 per cent from $US 54.74 million in 1989. The turnover achieved was $US 20.4847 million, an increase of 3.29 times over $US 4.78 million in 1989. 1,605 people for labour service were sent abroad, and 58 people remained abroad at the end of the year.

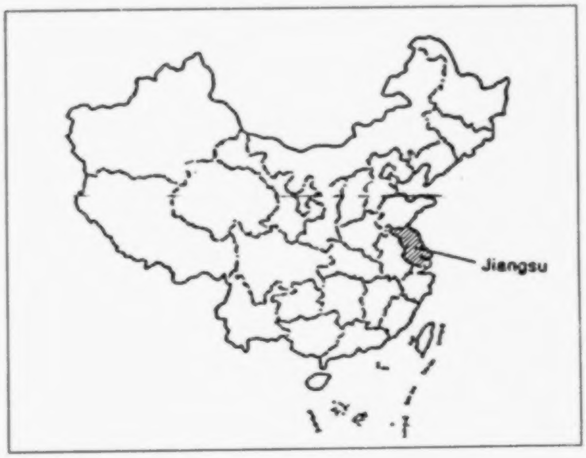
15. JIANGSU PROVINCE

Situated on a very fertile alluvial plain in the lower Yangtze River Valley, Jiangsu Province is the most densely populated Chinese province, where very intensive farming is practised to make the most of the land. The province has also a fairly developed industry turning out a wide spectrum of products ranging from automobiles, TV sets and silks and satins to arts and crafts.

Total Area: 102,600 sq km

Population: 65,350,000

Capital: Nanjing, a port on the Yangtze



Foreign trade

The total value of export and import of Jiangsu Province in 1990 reached $US 3.69452 billion, an increase of 11.73 per cent over $US 3.30674 billion in 1989.

The export commodities purchased totalled RMB22.64 billion yuan, up by 33.46 per cent over RMB16.964 billion yuan in 1989.

The total export value was $US 2.94995 billion, increasing by 20.84 per cent against $US 2.44111 billion in 1989, accounting for 10.72 per cent of the Province's GNP and 5.67 per cent of the total national export and ranking the fifth of the whole nation.

Among the export commodities, agricultural and sideline products reached $US 217.15 million, taking up 7.36 per cent of the total, light industrial products, $US 2.04847 billion, 69.44 per cent; heavy industrial products, $US 684.33 million, 23.2 per cent. Compared with that in 1989, the proportion of agricultural and sideline products as well as light industrial products in the total export decreased by 0.6 percentage points and 2.25 percentage points respectively while that of heavy industrial products rising by 2.85 percentage points. According to the international trade standard classification, the export of primary products was $US 602.76 million, accounting for 20.43 per cent of the export; industrial manufactured goods $US 2.34719 billion, 79.57 per cent. Compared with that in 1989, the proportion of primary products decreased by 1.27 percentage points and industrial manufactured goods increased by 1.27 percentage points.

11 items of commodities each with the export value exceeding $US 30 million totalled $US 1.06302 billion, accounting for 36.04 per cent of the total export; 29 items of commodities with the export value each between $US 10 to 30 million totalled $US 496.59 million, 16.83 per cent; 33 items of export commodities each with value of $US 5 to 10 million totalled $US 241.42 million, 8.18 per cent. 9 items commodities each with value over $US 50 million included silk and satins, cotton cloth, petroleum products, cotton-polyester blended garments and fabrics, raw silk, knitwear and cotton knitwear, amounting to $US 989.78 million altogether and taking up 33.35 per cent of the total export.

Goods were exported to 148 countries and regions.

Table 23. Major export markets

Country/region	*Export value ($US million)*	*Percentage of the total export*
Hong Kong and Macau	653.63	22.16
Japan	587.91	19.93
European Community	463.12	15.7
United States	385.44	13.06
Former Soviet Union	110.74	3.75
5 Eastern European Countries	77.19	2.62
Total	**2278.03**	**77.22**

The total import value reached $US 744.57 million, down by 13.99 per cent against $US 865.63 million in 1989. Among them, the import of means of production was $US 743.06 million, accounting for 99.8 per cent and that of means of livelihood $US 1.51 million, 0.2 per cent. If the imports were divided by the international trade standard classification, primary products were $US 120.32 million, 16.16 per cent and industrial manufactured products $US 624.25 million, 83.84 per cent.

The main items of imports were chemicals, timber, stable rayon, synthetic fiber, spare parts and components of TV sets and sound equipment, telecommunication equipment, complete sets of equipment. The total import value reached $US 484.1 million, accounting for 65.02 per cent of the total imports.

The main commodities came from 36 countries and regions.

Table 24. Main import markets

Country/region	*Import value ($US million)*	*Percentage of the total import*
United States	272.12	36.55
Japan	169.22	22.73

Total	**642.85**	**86.34**

Utilization of foreign capital

The province signed 512 contracts on the utilization of foreign capital, amounting to $US 456.08 million, up by 15.62 per cent over $US 394.48 million in 1989. Among them, 34 were foreign loans valued at $US 144.94 million, 393 were foreign direct investment with $US 285.61 million, and 85 were other forms of foreign investment with $US 25.53 million.

The actual utilization of foreign capital was $US 283.7 million, increasing by 19.47 per cent, compared with $US 237.46 million in 1989, of which, $US 155.34 million was foreign loans, $US 104.38 million was foreign direct investment and $US 23.98 million was other foreign investment. Of the 393 foreign direct investment contracts, 352 were equity joint ventures, 12 were contractual joint ventures and 29 were wholly foreign-owned enterprises. Among those projects, 388 were productive and 5 were non-productive. According to division of trade, they were classified as follows: 148 were in light industry, 99 in textile and garment industry, 59 in electronics and electric appliances, 31 in metalic products, 23 in medicines and health products, 15 in machinery products, 13 in agriculture, animal husbandry and cultivation, 2 in real estate, 2 in hotel and funfair and 1 in consultancy.

The investors were mainly from 18 countries and regions, of which, Hong Kong and Macau with 233 projects, $US 159.0565 million; the United States, 31 projects, $US 56.51 million; Taiwan Province, 60 projects, $US 28.4135 million; Japan, 36 projects, $US 12.4179 million; the Netherlands, 1 project, $US 11.2332 million; Singapore, 12 projects, $US 8.389 million; and Australia, 4 projects, $US 1.158 million.

By the end of 1990,525 foreign-invested enterprises went into operation. The total annual industrial output value reached RMB 4.58472 billion yuan and sales income was RMB 4.11885 billion yuan; direct export value amounted to $US 193.14 million, increasing 1.2 times over that in 1989. There was surplus in foreign exchange balance.

Technology import and export

2 contracts on technology import were signed, valued at $US 960,000. The projects covered technology of machinery and light industry from the United States and the United Kingdom.

Foreign economic cooperation

121 contracts were signed on overseas engineering and labour service cooperation with value of $US 75.89 million, down by 2.24 per cent against $US 77.63 million in 1989. The total turnover reached $US 83.89 million, up by 8.46 per cent over $US 77.35 million in 1989. 2,965 labour service personnel remained abroad at the end of the year. The major projects contracted were Benin highway,

teaching buildings in Kenya and construction engineering of ground satellite receiving station in Nepal.

The province undertook 13 projects involving Chinese government assistance, of which, 8 were completed items and 5 were technical and other cooperation. The 9 recipient countries were Tanzania, Senegal, Ecuador, Mozambique, Somalia and Barbados with projects in agriculture, water conservancy, geology, construction and electricity, The first phase technical cooperation of Senegal Dam and the consolidation and winding-up of canal in Somalia have been concluded. 114 people were sent out and 213 remained abroad at the end of the year. 1 project was carried out with assistance by the United Nations Industrial Development Organization with the aid valued at $US 605,000 and the first phase scheme was being undertaken. Jiangsu established 7 productive enterprises involving Chinese investment of $US 1.21 million in the United States, Australia, Antigua and Babuda, Bolivia and Malaysia.

16. JIANGXI PROVINCE

Situated on the south bank of the Yangtze River and west of Fujian Province, Jiangxi covers an area of 166,900 sq km and has a population of 36,950,000 at year-end in 1989. The provincial capital is Nanchang.

Known as the "homeland of non-ferrous metals," Jiangxi Province has the richest reserves of copper tantalum, cesium, thallium, scandium, uranium and thorium in China. Its deposits of tungsten, selenium, tellurium rubidium and lithium are the second biggest in the country. There are also rare earth, China clay and marble deposits.

Foreign trade

In 1990, the total export and import volume of Jiangxi Province was $US 631.18 million, increased by 7.48 per cent over $US 587.26 million in 1989.

The total value of commodities purchased for export reached RMB2.7 billion yuan, an increase of 9.18 per cent over RMB 2.473 billion yuan in 1989. Of the total, 96.04 per cent were directly exported by the Province totalling RMB 2.593 billion yuan, and 3.96 per cent were allocated for export to other port provinces totalling RMB 107 million yuan.

The total export volume reached $US 561.47 million, an increase of 8.86 per cent over $US 515.77 million in 1989, accounting for 6.31 per cent and 1.08 per cent of the Province's GNP and the nation's total export respectively.

The structure of export commodities was specified as follows: agricultural and sideline products and heavy industrial products, decreased by 1.07 percentage points and 1.46 percentage points respectively compared with those of 1989. Light industrial products increased by 2.53 percentage points. Industrial manufactured goods increased by 5.77 percentage points, of which, the percentage occupied by machinery and electronic products in the total export increased form 7.21 per cent to 9.25 per cent.

There are 745 items of export commodities, of which the export value of 80 items each with export value exceeding $US 1 million respectively. Their total value reached $US 475.28 million, accounting for 84.65 per cent of the total export. Of these, the export value of 14 items of commodities each exceeding $US 10 million respectively, totalled $US 262.26 million, accounting for 46.71 per cent of the total. They are garments, porcelain, synthetic blended fabrics, tungsten ores, rice, ammonium paratunstate, live pig, firecrackers and fireworks, cotton piece goods, canned goods, feedstuffs, automobiles, tea, and down products. The export value of 14 items of commodities ranged from $US 5-10 million. Their value reached $US 93.05 million, accounting for 16.57 per cent of the total. They are honey, cotton manufactured products, ramie cloth, resin, ramie yarn, cotton knitwear, steel products, rare earth, colour TV sets, cement, ferromanganese, spun rayon knitwear, silk and drawnworks.

The Province exported its commodities to 84 countries and regions. There were 43 countries and regions, to which the export value exceeded $US 1 million each, totalling $US 522.16 million and accounting for 93 per cent of the total.

The total imports valued at $US 69.71 million, a decrease of 2.49 per cent from $US 71.49 million in 1989.

The structure of import commodities was means of production valued at $US 69.17 million, accounting for 99.23 per cent of the total; and means of livelihood at $US 540,000, accounting for 0.77 per cent of the total. Classified by international trade standard, primary products valued at $US 32.49 million, accounting for 46.61 per cent of the total; and industrial manufactured products at $US 37.22 million, accounting for 53.39 per cent.

There were 41 import commodities such as chemical fertilizer amounting to $US 14.23 million, accounting for 20.41 per cent of the total import value; spun rayon cloth $US 6.63 million, 9.51 per cent; chemical raw materials $US 4.85 million, 6.96 per cent; synthetic fibre $US 3.28 million, 4.71 per cent and textile and garment subsidiary materials $US 3.09 million, 4.43 per cent.

Commodities were imported from 13 countries and regions. The value of imported goods from Hong Kong, Japan, Macau and the former Soviet Union accounted for 36.26, 32.78, 12.75 and 6.48 per cent of the total respectively.

Utilization of foreign capital

In 1990, Jiangxi Province signed and approved 101 contracts on utilizing foreign capital with the contract value of $US 122.92 million, an increase of 38.24 per cent over $US 88.9158 million in 1989. Of these contracts, 5 were involved in foreign loans totalling $US 92.11 million; 54 were in foreign direct investment totalling $US 28.55 million; 42 were in other foreign investment totalling $US 2.26 million. The value of foreign capital actually utilized reached $US 51.41 million, an increase of 33.05 per cent over $US 38.64 million in 1989. Of the total utilized foreign capital, foreign loans reached $US 42.03 million, foreign direct investment $US 6.21 million, other foreign investment $US 3.17 million.

Among the 54 projects receiving foreign direct investment, 42 were equity joint ventures, 7 were contractual joint ventures, and 5 were exclusively foreign-owned enterprises. Of these, 52 were productive enterprises, and 2 were non-productive. The foreign investment projects were involved in the fields of agriculture, forestry, animal husbandry and fishery, water conservancy, industry, communications and service. Foreign investment came from countries and regions such as Hong Kong, Taiwan Province, Japan, France, Liberia, etc., of which, 34 items were from Hong Kong, the value amounted to $US 13.83 million, accounting for 48.44 per cent of the foreign direct investment; 14 were from Taiwan Province, the value reached $US 390,000, accounting for 32.89 per cent.

By the end of 1990, 183 foreign-invested enterprises had been approved, 144 of which were equity joint ventures, 30 were contractual joint ventures, and 9 were exclusively foreign-owned enterprises. In 1990, the output value of 58 foreign-invested enterprises which had been put into operation and production reached RMB 398.55 million yuan, the foreign exchanges earned through export were $US 25.30 million, an increase of 138.23 per cent over that of 1989. The profit achieved was RMB 29.68 million yuan, an increase of 58.04 per cent over that of 1989. And the taxes turned over amounted to RMB 11.62 million yuan, an increase of 16.08 per cent over that of 1989.

Technology import and export

10 contracts were signed for the import of technology and equipment with the contract value of $US 5.076 million, a decrease of 62.50 per cent from $US 12.851 million in 1989. The foreign exchanges actually used amounted to $US 12.437 million, a decrease of 39.42 per cent from $US 20.53 million in 1989. The items of technical import came from Italy, the United States, Switzerland, Japan, Germany, Hong Kong and Taiwan Province, of which, the projects from Italy and the United States accounted for 32.18 per cent and 26.47 per cent of the total contract value respectively. The introduced projects were mainly involved in 4 trades of electronics, machinery, metallurgy and light industry. In 1990, 11 introduced projects were put into production.

Foreign economic cooperation

9 contracts of contracting foreign projects and labour service were signed with the contract value of $US 6.86 million, an increase of 59.16 per cent over $US 4.31 million in 1989. $US 7.23 million of the turnover was achieved, a decrease of 21.58 per cent from $US 9.22 million in 1989. In the year of 1990, 414 people for labour service were sent to countries and regions such as Libya, Japan, Zambia, Jordan, Saipan (the United States), Germany, Hong Kong, Iraq and Kuwait to undertake contracted engineering projects and also to provide labour service in sewing and cooking. By the end of the year, 534 people remained abroad.

In 1990, the Province undertook 4 foreign aid projects and sent abroad 70 foreign aid persons. The major projects were involved in the construction of a hospital in Equatorial Guinea and 3 technical cooperation projects such as a hydroelectric station in Sierra Leone, the M'pourie Farm in Mauritania and a hydroelectric station in Congo.

The Province received 2 donations from UNDP and UNICEF, which were used for the development of Shanjiang Lake, health care for women and children, export planning of tractors and porcelain. The total value of donations amounted to $US 2.25 million, of which, $US 2.37 million were actually received.

17. JILIN PROVINCE

This Northeast China province that borders on the Democratic People's Republic of Korea and the Maritime Territory of the former Soviet Union spreads over an area of 187,000 sq km in which dwell 24,027,000 people of the Han, Korean, Mongolian, Hui, Manchu and Xibe nationalities. The provincial capital is Changchun, where China's biggest automotive works are located.

In eastern Jilin Province are Changbaishan Mountains and coniferous forests where the largest nature reserve in China is located. In the Changbaishan Mountains ginseng is cultivated or grows wild, and there are white cranes, swans, Manchurian tigers and sika deer. In central Jilin Province is the Song-Liao fertile plain – one of the biggest granaries in China. The west is an extensive, and flat grassland for graze beef cattle and fine-wool sheep.

Foreign trade

The total value of export and import of Jilin Province in 1990 reached $US 952.71 million, a 2.28 per cent increase from $US 931.50 million in 1989.

The purchasing value for export commodities totalled RMB3.235 billion yuan, an increase of 9.22 per cent over RMB2.962 billion yuan of 1989.

Its total export value was $US 751.71 million, an increase of 11.96 per cent over $US 671.38 million in 1989, accounting for 10.04 per cent of the provincial GNP and 1.44 per cent of the total value of national export.

There were 8 export commodities with the value over $US 10 million, including maize, bean expellers, garment, frozen beef, cultivated ginseng, automobiles, castorseed and canned beef, the total value amounted to $US 401.47 million, marking up 53.41 per cent of the total export.

The commodities with the value ranging from $US 5 million to $US 10 million were beet pulp, silicon manganese alloys, soya bean, canned pork, Jackets, gym shoes, cement, woolen piece goods, kidney bean, bath towels, totalled $US 60.60 million, accounting for 8.06 per cent of the total export.

Goods were exported to 77 countries and regions.

The import value totalled $US 200.99 million, decreased by 22.73 per cent from $US 260.12 million in 1989. The imports of means of production costed $US 187.50 million, taking up 93.29 per cent of the total value, and the means of livelihood costed $US 13.49 million, accounting for 6.71 per cent of the total. Classified according to international trade standard, primary products, with the value of $US 19.44 million, accounted for 9.67 per cent of the total import, and industrial manufactured goods, with the value of $US 181.55 million, accounted for 90.33 per cent of the total.

Its main imports were auto parts, with the value of $US 33.85 million, chemical fertilizers with $US 30.27 million, chrome ores with $US 23.83 million, auto spare parts with $US 8.10 million and machines with $US 7.46 million. All of them amounted to $US 103.51 million, taking up 51.50 per cent of the total imports.

The import markets were scattered in 23 countries and regions.

India	6.76	3.36
France	5.03	2.50

The province's border barter trade annual value amounted to SF259.24 million, decreased by 16.58 per cent from SF310.77 million in 1989. Among them, import value reached SF124.05 million, down 10.85 per cent against SF 139.14 million in 1989, and export value reached SF135.19 million, 21.23 per cent decrease from SF171.62 million in 1989. Major import goods contain chemical fertilizer, cement and chemical materials; and major export goods contain maize, canned goods, leather shoes and gym shoes.

Utilization of foreign capital

82 contracts signed for using foreign capital were approved, with a contract value of $US 92.35 million, 43.13 per cent more than $US 64.52 million in 1989, 13 contracts of which were in foreign loan, with a value of $US 56.31 million: 52 were foreign direct investment, with a contract value of $US 20.81 million; and 17 were other foreign investment, with a value of $US 15.23 million.

Foreign investment actually used was $US 28.62 million, a decrease of 20.66 per cent against $US 36.08 million in 1989, $US 8.28 million of which were in foreign loan, $US 17.60 million in foreign direct investment, $US 2.74 million in other foreign investment.

Among the 52 projects with foreign direct investment, there were 43 equity joint ventures, 6 contractual joint ventures and 3 wholly foreign-owned enterprises. 32 were productive projects and 20 were non-productive projects. Classified in lines, 32 were on industrial projects, 3 on electronics projects, 1 each on textile and construction, 8 on commercial and service projects, and 7 on other projects.

The investors mainly came from: Hong Kong with 23 contracts, $US 6.71 million; Taiwan Province with 11 contracts, $US 6.12 million; Japan with 9 contracts, $US 4.09 million; the United States with 5 contracts, $US 3.50 million; Republic of Korea with 3 contracts, $US 0.25 million; and Canada with 1 contract, $US 0.14 million.

20 foreign investment enterprises were put into production and started their operation. The annual output value of foreign investment enterprises was fulfilled at a value of RMB231.49 million yuan, and foreign exchange earning was $US 8.57 million.

Technology import and export

36 contracts for introduction of technology and import of equipment were concluded, with a contract value of $US 42.14 million, 10.34 per cent less than $US 47.00 million in 1989. Foreign exchange actually used were $US 30.40 million, up by 22.48 per cent over $US 24.82 million. Import items mainly were: 4 from former Soviet Union, valued at $US 11.74 million; 13 from Japan, valued at $US 8.42 million; 1 from Austria, valued at $US 8.35 million; 2 from Switzerland, valued at $US 5.66 million; and 3 from Italy, valued at $US 3.22 million. The imports were mainly used in the fields of light industry, textiles, telecommunications, medicines, machinery, chemicals, agriculture, forestry, electronics and metallurgy.

The province signed 7 technology export contracts, with a value of $US 5.88 million, up 5.7 times over $US 880,000 in 1989.

Major items were exports to the former Soviet Union, Iran and Iraq of plastic injection shapings, equipment and technology of hydrogen peroxide solution, design technology and full set of equipment for brickyard with the annual output of 5 million pieces.

Foreign economic cooperation

72 contracts for contracting overseas projects and labour service were signed, worth $US 42.17 million, an increase of 1.2 times over $US 19.00 million in 1989; turnover was achieved to 22.44 million, an increase of 73 per cent more than $US 19.00 million in 1989. Workers sent abroad reached 3,428 persons, 2,483 persons being abroad at the end of the year. Workers were distributed to countries and regions such as the former Soviet Union, the United States, Japan, Spain, Singapore, Thailand, Canada, Germany, the United Arab Emirates, Libya, Niger and Turkey. Major contractual items cover Sudan Main Bridge and Dam in Niger etc.

Jilin undertook 3 foreign aid projects in Niger, Sudan and Vanuatu, chiefly on physical installation, bridge construction and medical services.

6 bilateral and international organizations assistance projects were accepted from the United Nations, Japan and Canada, with a value of $US 21.51 million.

1 non-trade enterprise was established abroad, with a total investment of $US 437,000 from Chinese side.

18. LIAONING PROVINCE

Bordering on the Democratic People's Republic of Korea, Liaoning, one of most economically developed provinces in China, boasts such large industrial centers as Shenyang, the steel center of Anshan and the mining center of Fushun, where an open-cut mine with coal seams 90-m thick is located. It has an area of 147,380 sq km and a population of nearly 40 million. The provincial capital is Shenyang which is well-known for its heavy industry in China.

Foreign trade

The value of export and import of Liaoning Province in 1990 totalled $US 6.295 billion, an increase of 18.02 per cent over $US 5.334 billion in 1989.

The foreign trade purchase value was RMB 12.501 billion yuan, an increase of 6.87 per cent over RMB 11.697 billion yuan in 1989.

The export value totalled $US 5.6 billion, an increase of 25.96 per cent over $US 4.446 billion in 1989, accounting for 10.76 per cent of the national total export and ranking the second in the country, representing 27.61 per cent in GNP of the Province.

The structure of export commodities was: agricultural and sideline products at $US 622 million, accounting for 11.17 per cent of the total export; light industrial products at $US 881 million, accounting for 15.73 per cent of the total export; heavy industrial product at $US 4.097 billion, representing 73.16 per cent of the total. Comparing with 1989, the proportion of agricultural and sideline products and light industrial products decreased 2.86 and 1.81 percentage points respectively; and heavy industrial products increased by 4.67 percentage points.

The products were exported to more than 121 countries and regions. The main markets were: Japan, $US 2.255 billion, accounting for 40.27 per cent of the total export; the United States, $US 1.052 billion, accounting for 18.79 per cent; Singapore, $US 499 million, accounting for 8.91 per cent; and Hong Kong, $US 471 million, accounting for 8.41 per cent.

The export of border trade was $US 5.31 million, a decrease of 48 per cent over $US 10.21 million in 1989.

The import value was $US 695 million, a decrease of 21.56 per cent over $US 886 million in 1989. The main import products were complete sets of equipment and technology, steel products, chemical raw materials, light industrial machinery, electrical equipment and textile products, etc. The main import markets were Japan, $US 274 million; Hong Kong, $US 138 million; the United States, $US 52 million; and Germany, $US 29 million.

Utilization of foreign capital

641 contracts of utilizing foreign capital were signed and approved with a total contract value of $US 764 million, a decrease of 16.78 over $US 918 million in 1989. Of them, 37 contracts were foreign loans, totalled $US 210 million; 371 contracts were foreign direct investment, a total contract value of $US 496 million; and 233 contracts were other foreign investment, valued $US 58.4 million.

The actually utilized foreign capital totalled $US 961 million, of which, foreign loans were $US 310 million; foreign direct investment were $US 600 million; other foreign investments were $US 51 million. The investors were mainly from Hong Kong, Japan and the United States.

Among 371 foreign direct-invested projects, 287 were Sino-foreign equity joint ventures, 34 were contractual joint ventures, and 50 were wholly foreign-owned enterprises.

The industrial output of foreign-funded enterprises in the province amounted to RMB3.134 billion yuan. Foreign exchange earnings reached $US 218 million, $US 138 million of which was earned from export of products, an increase of 57.97 per cent over the year 1989.

Technology import and export

85 contracts were signed for importing technology and equipments with a total contract value of $US 58.96 million, a decrease of 33.62 per cent over $US 88.82 million in 1989. Of those, 2 were technology contracts with total value of $US 0.5 million; 17 were production lines and key machines with total value of $US 22.01 million; and 66 were separate machines with $US 36.45 million. Major industries involved were metallurgy, chemical industry, textile industry, communication etc. The imported projects were mainly from Japan, Germany, Italy and the United States.

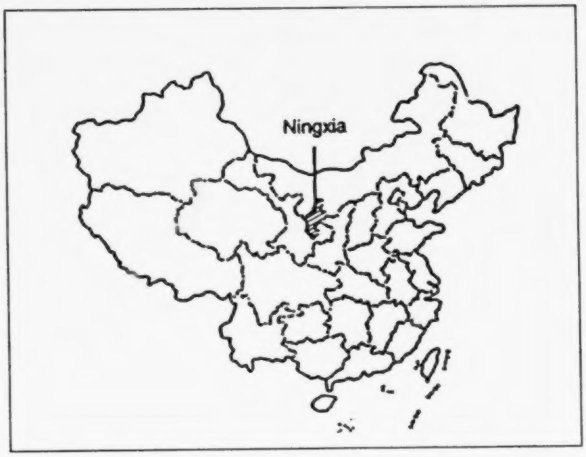
79 contracts for exporting technological products were signed with a total contract value of $US 81.5 million. Of them, technical licensing was $US 0.23 million; technical information and service was $US 2.74 million; technical cooperation was $US 0.21 million; and complete plants and production line were $US 78.32 million. The export of technology went to 22 countries and regions which mainly involved Bangladesh, Pakistan, Thailand, Indonesia, Chile, India, the former Soviet Union, Japan and Hong Kong.

Foreign economic cooperation

94 contracts on contracting overseas projects and providing labour service were concluded with a total contract value of $US 244.19 million, an increase of 96.66 per cent over $US 124.17 million in 1989, and the turnover reached $US 81.66 million, an increase of 1.05 times over $US 39.76 million in 1989. The projects mainly scattered in the former Soviet Union, Japan and the Middle East, etc. 13,810 persons were sent abroad and 6,346 persons were being abroad at the end of the year. 10 complete plant projects for foreign economic aid were undertaken. 8 projects for the United Nations system and bilateral aid were continuously carried out with a transaction value of $US 26.69 million. 3 projects were completed by the end of the year with an actual value of $US 2.11 million.

9 non-trade equity joint ventures were established abroad with the Chinese investment of $US 3.67 million.

19. NINGXIA HUI AUTONOMOUS REGION



One of the five autonomous regions in China, Ningxia is situated on the upper reaches of the Yellow River. The regional capital is Yinchuan, a city with many mosques and a large Moslem Population. The Ningxia Hui Autonomous Region spreads over an area of 66,400 sq km and has a population of 4,548,000, 1,497,000 of whom are Hui people who are followers of Muhammad.

With an elevation of 1,100-2,200 m. above sea-level, the autonomous region is divided into two parts, the highlands in the south and the Ningxia Plain irrigated by water from the Yellow River in the north. Rice, wheat, beet, melons, red peppers and Chinese wolfberries, which are very rich in vitamins, are cultivated in the agricultural districts, while sheep and cattle are pastured in the highlands.

There are deposits of coal, phosphorous, gypsum, petroleum, quartz, barite, marble and silica. Coal, with a total reserve of 30 billion tonnes, is found in all the 14 counties in the autonomous region.

Foreign trade

The total export and import value of Ningxia Hui Autonomous Region in 1990 was $US 83.24 million, 10.37 per cent more than $US 75.42 million in 1989.

Export commodity purchasing value was RMB 350.84 million yuan, 47.91 per cent more than RMB 237.20 million yuan in 1989.

The total export value was $US 75.13 million, 26.44 per cent more than 1989's $US 59.42 million, accounting for 5 per cent of the region's GNP and 0.14 per cent of the total export value of the country.

There were 15 export commodities with export value each exceeding $US 1 million, namely, coal, ferro silicon, food stuffs, feeding stuffs, cashmere, woolen blanket, industrial bearing, cotton yarn, tyres, drilling machine, cotton bleached cloth, ramie cloth, spun rayon piece goods, pseudo-ephedrine HCI, and pulses, with the combined export value of $US 53.46 million, accounting for 71.16 per cent of the total export value.

The export commodities were sold to 35 countries and regions.

The total import value was $US 8.11 million, 49.31 per cent lower than that of $US 16 million in 1989. The imports included means of production valued at $US 7.51 million, taking up 92.60 per cent of the total import and means of subsistences valued at $US 0.6 million, occupying 7.40 per cent. According to the international trade classification standard, primary products amounted to $US 1.19 million, taking up 14.69 per cent of the total import, and industrial manufactured products were $US 6.92 million, accounting for 85.33 per cent.

The major imports included, electric power equipment with $US 1.68 million, accounting for 20.72 per cent of the total import value; tyre cord fabric $US 1.36 million, 16.79 per cent; chemical machinery, $US 0.46 million, 5.61 per cent; light industry equipments, $US 0.43 million, 5.36 per cent. The main import markets were the United States ($US 5.20 million, taking up 64.08 per cent of the total import), Hong Kong ($US 1.78 million, 21.91 per cent), Japan ($US 0.56 million, 6.86 per cent), and Germany ($US 0.55 million, 5.55 per cent).

Utilization of foreign capital

7 contracts for utilizing foreign funds were signed and approved with a total contractual foreign investment value of $US 7.35 million, a 5.91 per cent increase compared with $US 6.94 million in 1989. Among them, 3 were for government loans of $US 6.33 million; 4 were for foreign direct investment of $US 1.02 million. The foreign capital actually used amounted to $US 13.37 million, 3.84 per cent more than that of 1989, among which government loans were $US 12.34 million and foreign direct investment were $US 1.03 million. Of all 4 contracts for foreign direct investment from Hong Kong, 3 were equity joint ventures and 1 was contractual joint venture. They were all productive projects.

By the end of 1990, 15 was foreign investments were approved by the Autonomous Region, 10 were in operation, earning $US 0.52 million foreign exchange through export, 3.5 times more than that of 1989.

Technology import and export

9 contracts were signed for technology and equipment import with a value of $US 13.46 million, an increase of 47.59 per cent over the $US 9.12 million in 1989. Technologies and equipments were from Spain ($US 4.67 million), Germany ($US 2.83 million), Switzerland ($US 2.38 million). Denmark ($US 1.97 million), the Netherlands ($US 0.77 million), Taiwan Province ($US 0.65 million), covering light industry, plastics, garment making, food-stuffs, printing, chemical fibre, etc.

Foreign economic cooperation

Last year a turnover of $US 8.12 million was earned through contracted projects and labour service cooperation. 257 people were dispatched abroad in the year, most of them were dispatched to Yemen, Egypt, United Arab Emirates, Uganda and Kuwait, etc. Up to the end of the year, 524 people were working abroad.

The residence building and maintenance projects in Yemen, Egypt, and United Arab Emirates, the barracks projects in Uganda and labour service cooperation project in Kuwait were the main contracted projects.

1 project for foreign aid, project of maintenance the government office building of Sierra Leone, was undertaken. 30 people were sent to work abroad in the year, up to the end of which, 30 people were working abroad.

The region implemented 4 international organization's and bilateral aid projects with an amount of $US 2.30 million. The main projects were Ningxia Nurse School and Science and Technology Hall equipments, each was provided $US 1 million by the Japanese Government in the form of gratuitous aid; the woman project of Gu Yuan county was given the amount of $US 0.27 million gratuitously by the United Nations Population Funds. $US 2.27 million had already been completed.

20. QINGHAI PROVINCE

With an elevation exceeding three kilometres, Qignhai Province on the northeastern part of the Tibet-Qinghai Plateau is known as the "cradle" of mighty rivers. The Yangtze, Yellow River and Mekong rise in this province that spreads over an area of 720,000 sq km and has a population of 4,400,000 made up of the Han, Tibetan, Hui and other nationalities. The provincial capital is Xining, an ancient city and a rising industrial center.

There are many lakes in the province that abounds in potash, bromine, abestos, selenium, sulphur, Glauber's salt, boron and other deposits. China's largest salt lake, Lake Qinghai, is situated in the province. Salt is so plentiful that highway road-beds in some localities are built on it.

Foreign trade

The total volume of export and import of Qinghai Province in 1990 came to $US 70.27 million, showing an increase of 8.31 per cent against $US 64.88 million in 1989.

The purchasing value of export commodities reached RMB 421.64 million yuan, an increase of 25.15 per cent over RMB 336.92 million yuan in 1989.

The total export volume was $US 68.05 million, an increase of 16.34 per cent over $US 58.49 million, and accounting for 5.24 per cent and 0.13 per cent respectively of the Province's GNP and the total export volume of China.

Among the export commodities, farm and sideline products came to $US 20.91 million, accounting for 30.73 per cent of the Province's total export, 5.9 percentage points down as compared with that of 1989; light industrial products, $US 12.14 million, accounting for 17.85 per cent, and 0.14 percentage point up; and heavy industrial products. $US 35 million, accounting for 51.43 per cent, and 5.73 percentage points up. To classify according to the international standard for trade, primary products amounted to $US 24.42 million, accounting for 35.89 per cent of the total export, 6.66 percentage points down; and manufactured industrial products amounted to $US 43.63 million, accounting for 64.11 per cent, 6.66 percentage points up.

The export commodities with export value of more than $US 2 million each were silicon iron, amounting to $US 18.47 million; carpet, $US 5.03 million; metal silicon, $US 4.36 million; frozen beef, $US 3.66 million; zinc concentrate ore, $US 3.29 million; cordycepts, $US 3.07 million; horsebean, $US 2.94 million; and dehaired goatwool, $US 2.63 million.

The export commodities were sold to 33 countries and regions. The major buyers were Japan with its purchase amounting to $US 34.48 million, accounting for 50.67 per cent of the Province's total export; Hong Kong, $US 9.01 million, accounting for 13.24 per cent; the former Soviet Union, $US 6.46 million, accounting for 9.49 per cent; Singapore, $US 3.84 million, accounting for 5.64 per cent; Italy, $US 3.04 million, accounting for 4.47 per cent; France, $US 2.83 million, accounting for 4.16 per cent; and the United States, $US 1.72 million, accounting for 2.53 per cent.

The total volume of import came to $US 2.22 million, a decrease of 65.26 per cent from $US 6.39 million in 1989. The imports included means of production valuing $US 1.03 million, taking up 46.04 per cent of the total import; and means of livelihood valuing $US 1.19 million, taking up 53.60 per cent. To classify according to the international standard for trade, $US 110,000 for primary products, accounting for 4.95 per cent of the total import; and $US 2.11 million for manufactured industrial products, accounting for 95.05 per cent. The major import commodities were: western medicine valued at $US 320,000, accounting for 14.41 per cent of the total import; photographic paper valued at $US 310,000, 13.96 per cent; bearings valued at $US 300,000, 13.51 per cent; medical apparatus and instruments valued at $US 280,000, 12.61 per cent; and sound equipment and materials valued at $US 120,000, 5.41 per cent. The imports mainly came from Hong Kong ($US 1.66 million, accounting for 74.77 per cent of the total import); and Japan ($US 490,000, accounting for 22.07 per cent).

Utilization of foreign capital

2 contracts were signed and approved for the use of foreign capital. The contract value amounted to $US 6.1 million, an increase of 369.23 per cent over $US 1.3 million in 1989. The foreign capital was loan from the Swiss and German Governments, respectively used for importing key equipment in Qinghai Mafang Flour Mill and reconstruction of earthquake disaster area in Hainan

Tibetan autonomous Prefecture.

Foreign economic cooperation

2 contracts were signed for economic aid, involving medical and health programme and railway construction. The recipient countries included Burundi and Tanzania. Both were fulfilled on schedule. In 1990, 12 persons were sent and remained abroad at the end of the year.

In 1990, the Province received 23 aid programmes with the value of $US 2.9534 million provided by UNICEF, UNFPA, Canadian Government, etc.

21. SHAANXI PROVINCE

Situated in the middle reaches of the Yellow River some 800 km west of the East China coast, Shaanxi Province spreads over an area of 205,600 sq km and has a population of 31,910,000, according to a year-end count in 1989. The provincial capital of Xi'an, where the terra-cotta warriors and battle steeds of Emperor Qin Shihuang have been excavated, is an ancient Chinese capital and an industrial city now building aircraft and TV tubes.

The province abounds in coal, petroleum, molybdenum, antimony and mercury. Its coal reserve estimated at 146.4 billion tonnes is the third largest in China after that of Shanxi Province and Inner Mongolia. Such rare animals as the giant panda and golden-haired monkey are found in the southern part of the province bordering Sichuan Province.

Foreign trade

The total export and import volume in Shaanxi Province in 1990 was $US 541.88 million, an increase of 28.27 per cent over $US 422.44 million in 1989.

The total export commodity purchasing volume was RMB 1.84206 billion yuan, an increase of 34.63 per cent over RMB 1.36823 billion yuan.

The total export volume reached $US 460.59 million, an increase of 47.30 per cent over $US 312.68 million in 1989, accounting for 5.89 per cent of the Province's GNP and 0.09 per cent of the total export volume of the country.

Table 32. Export commodity pattern

Classified by agriculture, light and heavy industries				*Classified the standard of international trade*			
Category	*Export value ($US million)*	*Percentage of the total export value*		*Category*	*Export value ($US million)*	*Percentage of the total export value*	
		1990	*1989*			*1990*	*1989*
Agricultural and sideline products	45.39	9.85	20.74	Primary products	95.87	20.81	36.95
Light industrial products	275.69	59.86	56.71				
Heavy industrial products	139.51	30.29	22.55	Industrial manufactured products	364.72	79.19	63.05

There were 20 items of export commodities worth of $US 233.30 million, accounting for 50.65 per cent of the total export value; 7 items of export commodities each with the export value over $US 10 million were: cotton, cotton polyester fibre cloth, cotton yarn, garments, medicines, steam coal, mulberry silk, etc., with the total value of $US 152.57 million, accounting for 33.12 per cent of the total export volume.

The commodities were exported to 77 countries and regions. The major markets for export were concentrated in 10 countries and regions including Hong Kong, Japan and Germany.

Table 33. Major markets for export

Country/region	*Export value ($US million)*	*Percentage of the total export value*
Hong Kong	140.12	30.42
Japan	68.92	14.96
United States	27.39	5.95
Germany	13.05	2.83
Former Soviet Union	11.13	2.42
Belgium	10.15	2.20
Singapore	9.47	2.06
United Kingdom	8.96	1.95
the Netherlands	8.78	1.91
France	5.53	1.20
Total	**303.50**	**65.89**

The total import volume amounted to $US 81.29 million, down 25.94 per cent from $US 109.76 million in 1989, of which, the import value of means of production was $US 60.73 million, making up 74.71 per cent of the total import value; the means of livelihood, $US 20.56 million, making up 25.29 per cent. Classified by the standard of international trade, primary products amounted to $US 21.60 million, accounting for 26.57 per cent of the total import value; industrial manufactured products, $US 59.69 million, making up 73.43 per cent.

9 major import commodities were: electronic computers, chemical raw material, cotton, viscose staple rayon, thin copper plate, electronic industrial equipment, telecommunications equipment, western medicines, T.V. sets and sound equipment, etc., with a total amount of $US 66.16 million, accounting for 81.39 per cent of the total import value.

The import commodities came from 17 countries and regions. The major markets were: Japan, with value of $US 40.93 million; Hong Kong, with a value of $US 22.21 million; Germany, with a value of $US 3.41 million; Italy, with a value of $US 3.19 million; the United States, $US 2.14 million; and Belgium, $US 1.44 million. The total value was $US 73.32 million, accounting for 90.20 per cent of the total import value.

Utilization of foreign capital

29 contracts of foreign investment were approved and signed in 1990, with a total value of $US 197.71 million, down 25.06 per cent from $US 263.84 million in 1989. Of the total, 5 contracts were foreign loans, with a value of $US 187.15 million; and 24 were foreign direct investment, with a value of $US 10.56 million.

The actually utilized foreign capital amounted to $US 115.66 million, down 27.84 per cent from $US 160.29 million in 1989, of which, $US 68.38 million was from foreign loans, $US 41.88 million was foreign direct investment, and $US 5.40 million was other foreign investment.

Among the 24 foreign directly invested projects, 21 were joint ventures, 1 was contractual joint venture, 2 were solely foreign-owned enterprises, 20 were productive projects, and 4 were non-productive enterprises. The industries these projects involved were in textiles, electronics, food, restaurant and drink, decorating, forwarding and light industry.

Investors were mainly from: Hong Kong, 17 projects worth of $US 9.19 million; Japan, 5 projects worth of $US 970,000; and the United States, 2 projects worth of $US 400,000.

By the end of 1990, 76 foreign-funded enterprises were put into operation, accounting for 45 per cent of the total approved. The sales volume of the whole year was RMB 547.35 million yuan, with a profit of RMB 31.95 million yuan, an export value of $US 21.56 million.

Technology import and export

16 contracts for import of technology and equipment were signed in 1990, with a contract value of $US 8.53 million, dropped by 72.42 per cent compared with $US 30.93 million in 1989. The actually utilized capital was $US 14.74 million, down 32.91 per cent from $US 21.97 million in 1989. The imported technology and equipment were from: Japan, Hong Kong, the United States, Germany and so on. The industries involved were in machinery and electronics, light industry, textiles and energy, etc.. 8 imported projects were completed and put into operation in that same year, and the annual output value could be increased by RMB 242.98 million yuan, profits by RMB 27.34 million yuan, tax revenue by RMB 12.93 million yuan.

6 contracts for export of technology and technological products were signed with a contract value of $US 14.89 million, 4.1 times more than $US 2.92 million in 1989.

Foreign economic cooperation

In 1990, 16 contracts were signed for foreign contracting engineering and labour service cooperation with a total value of $US 32.06 million, 9.69 times more than $US 3 million in 1989; the turnover fulfilled was $US 24.22 million, down 2.77 per cent from $US 24.91 million in 1989; in that same year, 1,217 labour service personnel were dispatched abroad, and there were 900 people working abroad by the end of that year. They were mainly dispatched to Japan, Hong Kong, Cameroon, etc. The major contracting engineering projects were in the fields of construction, electric power, medical treatment, water conservancy and agriculture, etc.

There were 6 aid projects in foreign countries undertaken by Shaanxi, of which, the new projects were: the project of consulting services on electric power prospecting and electric power development in Antigua and Barbuda; the survey, designing and purchasing of equipment and materials for the project of farmland water conservancy and irrigation in Defa, the Niger, had been completed. In that same year, 50 people were dispatched to the foreign countries, and there were 10 people working abroad by the end of that year.

26 projects financed from international organizations and for bilateral assistance had been performed (14 were newly signed in 1990). The amount from foreign assistance was more than $US 3.70 million. The funds mainly came from UNICEF, UNFPA, WFP, Canada, Sweden and European Community, etc. The industries involved were in water conservancy, agriculture, culture and education, health, medical treatment, pharmaceuticals, family planning, milk, dairy products, professional training, and so on.

Establishing the "Chinese Food Center" in Malaysia was newly approved. It mainly handled medicinal meals. The Chinese side invested $US 1.50 million.

22. SHANXI PROVINCE

Shanxi, China's banner coal producer, is situated on the middle reaches of the Yellow River in North China. It has a verified coal reserve of 257 billion tonnes, which is mined and then moved out of Shanxi province by trains and lorries, or converted into electricity at "pit-head" power plants and carried by high-voltage transmission lines to Beijing, Tianjin and other industrial cities in North China. Shanxi produces 1/3 of China's annual total coal output. The provincial capital is Taiyuan, a big industrial city.

Total area:	156,300 sq km
Population:	27,930,000 at end of 1989

Foreign trade

In 1990, the total export and import value of Shanxi Province was $US 521.12 million, up 12.82 per cent over $US 461.89 million in 1989.

The export commodity purchasing value was RMB 2.17273 billion yuan, increasing 14.22 per cent over RMB 1.90228 billion yuan in 1989. The variety of commodities purchased for export was 496, of which, industrial and mineral products were RMB 1.67834 billion yuan, representing 77.25 per cent of the export purchase value while agricultural and sideline products were RMB 494.39 million yuan, taking up 22.75 per cent

The export value totalled $US 458.11 million, up by 14.52 per cent over $US 400.01 million in 1989, taking up 5.83 per cent of the Province's GNP and 0.88 per cent of the national export.

The structure of export commodities was: farm and sideline products amounting to $US 45.81 million, representing 10 per cent of the total export; light industrial products, $US 103.57 million, 22.61 per cent; heavy industrial products, $US 308.73 million, 67.39 per cent. Compared with that in 1989, the proportion of farm and sideline products, heavy industrial products decreased by 2.82 percentage points and 7.06 percentage points respectively, while that of light industrial products increased by 9.88 percentage points. If the exports were divided according to the international trade standard classification, the export of primary products was $US 314.64 million, taking up 68.68 per cent of the total while manufactured industrial products was $US 143.47 million, 31.32 per cent.

The Province exported 486 varieties of products, among which, 50 items with an export value exceeding $US 1 million, totalling $US 379.23 million which represented 82.78 per cent of the total export value. 11 kinds of commodities with export value exceeding $US 5-10 million, included maize, aluminium, pig iron, cotton yarn, mulberry silk, flange plate, ferro-silicon, mung bean furfural, walnut meat and frozen rabbit. Their total export value was $US 300.92 million, taking up 65.69 per cent. 3 kinds of commodities with export value exceeding $US 10 million were coal, coke and cotton cloth. Their export value totalled $US 228.2 million, representing 49.81 per cent. In 1990, the export of machinery and electronic products reached $US 36.4 million, representing 7.95 per cent of the total export and increasing by 39.46 per cent over $US 26.1 million in 1989.

The Province exported commodities to 82 countries and regions. The markets with export value over $US 5 million covered Hong Kong, $US 147.74 million, taking up 32.25 per cent of the total export; Japan, $US 136.74 million, 29.85 per cent; the United States, $US 22.55 million, 4.92 per cent; Germany, $US 19.5 million, 4.26 per cent; the former Soviet Union, $US 14.81 million, 3.23 per cent; the Netherlands, $US 10.39 million, 2.27 per cent; France, $US 10.33 million, 2.25 per cent; Singapore, $US 7.96 million, 1.74 per cent; United Kingdom, $US 6.22 million, 1.36 per cent; and Taiwan Province, $US 5.67 million, 1.24 per cent. The exports to the above-mentioned countries and regions amounted to $US 381.91 million, taking up 83.37 per cent.

The total import value reached $US 63.01 million, increasing 1.83 per cent over $US 61.88 million in 1989. Among them, direct import value was $US 44.04 million and the value for import by trust was $US 18.97 million.

The structure import commodities were means of production, $US 42.02 million, 66.69 per cent; means of livelihood, $US 20.99 million, 33.31 per cent. Divided by the international trade standard classification, the import of primary products was $US 15.19 million, 22.11 per cent; and industrial manufactured goods, $US 47.82 million, 75.89 per cent. The major import commodities covered light industrial products, machinery products, petro-chemical products, pharmaceuticals and health care products, complete sets of equipment and technology, instruments, metals and minerals, cereals, oils and foodstuffs textiles, arts and crafts, amounting to $US 47.94 million, 76.08 per cent of the Province's import.

The imports mainly came from 19 countries and regions, such as Hong Kong, $US 16.27 million, accounting for 36.94 per cent of direct imports; Japan, $US 8.75 million, 19.87 per cent; the United States, $US 5.63 million, 12.78 per cent; Germany, $US 5.38 million, 12.22 per cent; Australia, $US 1.8 million, 4.09 per cent; Sweden, $US 1.65 million, 3.75 per cent; Taiwan Province, $US 1.08 million 2.45 per cent.

Utilization of foreign capital

29 contracts of utilizing foreign capital were approved with a total value of $US 52.59 million, up by 1.85 times over $US 18.45 million in 1989. Among them, 2 projects were in form of foreign loans with a value of $US 36.4 million; 25 projects in foreign direct investment, $US 12.02 million; and 2 in other forms of foreign investment, $US 4.17 million.

The actual use of foreign capital was $US 12.1 million, increasing by 23.34 per cent against $US 9.81 million in 1989, of which foreign loans were, $US 8.7 million and foreign direct investment was $US 3.4 million.

Of the 25 projects involving foreign direct investment, 23 were joint ventures and 2 were wholly foreign-owned enterprises. Among them, 22 were production-oriented and 3 were non-productive ones. If dividing them by lines, 8 projects were for light industry, and 4 were for metallurgy and food industry respectively, one each for coal, chemical industry, textiles, garments, machinery and electronic industry respectively, and 3 for other sectors.

The sources of foreign investment were: Hong Kong, 20 projects; the United States, 2; one each from Thailand, Japan and Canada respectively.

By the end of 1990, 56 foreign-invested enterprises have been put into operation and a total output value of RMB 195 million yuan were realized. The turnover was RMB 107.24 million yuan and foreign exchanges earned were $US 15.10 million.

Technology import and export

There were 12 contracts signed for technology and equipment import with contract value of $US 11.98 million, down by 21.02 per cent compared with $US 15.1688 million in 1989.

Among the imported items, 5 were for machinery, 3 were for light industry, and 4 were for electronics. The sources of the imports were: Italy, 3 items, $US 4.45 million; Hong Kong, 3 item, $US 3.86 million; Spain, 1 item, $US 1.13 million; Sweden, 1 item, $US 990,000; Germany, 2 items, $US 740,000; Japan, 1 item, $US 570,000; and Switzerland, 1 item, $US 240,000.

Foreign economic corporation

11 contracts for contracted projects and labour service were signed with contract value of $US 1.86 million, increasing by a large extent compared with that in 1989. The turnover was $US 1.18 million, down by 77.82 per cent against that in 1989; 122 labour service personnel were dispatched abroad and 87 still remained outside China by the end of 1990, scattering in countries and regions including Hong Kong, the former Soviet Union, Germany, Iraq, Central Africa, Chad, Equatorial Guinea, Papua New Guinea, Mauritius, Cameroon, Yemen, Zambia. The contracted projects were: houses and buildings maintenance of Primary School in San Tome and Principe, Construction of Office Building of Cooperation Ministry as well as Embassy Building Construction.

5 projects involving aid to other countries were completed, among which, 1 was construction and maintenance, 1 for agriculture and 3 for engineering supervision and management. The recipient countries were San Tome and Principe, Central Africa, Chad, Zambia and Equatorial Guinea. 27 people in aid to foreign countries were sent abroad and 27 remained there at the end of the year. Furthermore, 143 sets (items) of machinery and electronic products were provided for 15 projects in 14 countries in Asia, Africa and Latin America.

3 overseas enterprises were set up with approval in Mongolia, Thailand and Australia, involving $US 1.3 million from Chinese side.

23. SHANDONG PROVINCE

With an 80 million-plus population, Shandong, situated on the coast where the Yellow River empties into the sea, is China's third most populous province. The province has an area of 153,000 sq km. It abounds in coal, petroleum, iron and other minerals. The Shengli Oilfield, the second biggest in China, is located in the province, a big producer of wheat, cotton, maize and other crops. Its peanut output is the biggest in China. The provincial capital is Jinan.

Foreign trade

The total export and import value of Shandong Province in 1990 was $US 4.186 billion, an increase of 3.92 per cent over $US 4.028 billion in 1989.

The total value of commodities purchased for export came to RMB 11.14 billion yuan, an increase of 11.07 per cent over RMB 10.03 billion yuan in 1989.

The total export value amounted to $US 3.496 billion, up 14.14 per cent against $US 3.063 billion in 1989. It accounted for 12.76 per cent of the Province's GNP and 6.71 per cent of the nation's total export, ranking the fourth in the nation.

The export commodity composition was: $US 1.201 billion of farm and sideline products, making up 34.3 per cent of the total export, down 1.6 percentage points over 1989 in proportion; $US 988 million of light industrial products, making up 28.3 per cent, down 0.5 percentage point; $US 1.037 billion of heavy industrial products, making up 37.4 per cent, up 1.9 percentage points in proportion. Classified according to international trade standards, the export of primary products was $US 1.748 billion, making up 50 per cent of the total export; that of finished industrial products was $US 1.748 billion, making up 50 per cent.

Commodities each with the export value exceeding $US 10 million included: maize, beans, edible oils, frozen pork, aquatic products, vegetables, canned goods, beer, vermicelli, ground nut products, feedstuffs, fluecured tobacco, timber, Chinese crude drugs, silk, cotton, cotton yarn, cotton piece good, cotton manufactured goods, silks and satins, garments, drawnworks, carpets, footwear, colour TV sets, grass and willow plaited products, rolled steel, hardwares, cement, graphite, coal, crude oil, dyestuff, rubber products, medicines, machine tools, auto spare parts, ceramics and so on, totalling 55 varieties. Their export value came to $US 2.75 billion, accounting for 78.66 per cent of the total export.

The commodities were exported to 142 countries and regions. The major markets were: Japan, $US 920 million, making up 26.32 per cent of the total export; Hong Kong and Macau, $US 590 million, making up 16.88 per cent : EC, $US 400 million, making up 11.44 per cent; Singapore, $US 350 million, making up 10.01 per cent; the United States, $US 260 million, making up 7.44 per cent; Republic of Korea, $US 180 million, making up 5.15 per cent; former Soviet Union and East Europe, $US 160 million, making up 4.58 per cent.

The value of imported commodities that arrived in China was $US 690 million, down 28.87 per cent against $US 970 million in 1989. Among them, means of production was $US 660 million, taking up 95.65 per cent of the total import; while means of subsistence was $US 30 million, taking up 4.35 per cent. Classified according to international trade standard, the import of primary products was $US 290 million, taking up 42.03 per cent of the total import and that of finished industrial products was $US 400 million, taking up 57.97 per cent.

The major imports were: complete-set of equipments and technologies, light industrial machineries, computers, cars and motorcycles, medical apparatus and instruments, TV sets and audio equipments, rolled steel, non-ferrous metals, rubber and products, chemical fertilizer, wool, synthetic fibres, animal fats and vegetable oils (oilseeds).

The imports came from 24 countries and regions. The major sources were: Japan, $US 150 million, taking up 21.74 per cent of the total; Hong Kong, $US 120 million, taking up 17.39 per cent; the United States, $US 98.60 million, taking up 14.29 per cent; Germany, $US 59 million, taking up 8.55 per cent; Singapore, $US 35.80 million, taking up 5.19 per cent; France, $US 34.60 million, taking up 5.01 per cent; Italy, $US 28 million, taking up 4.06 per cent.

Utilization of foreign capital

The Province signed 663 contracts for utilizing foreign capital with a contract value of $US 407.01 million, down 10.40 per cent against $US 454.26 million in 1989. Of these contracts, 18 were for foreign loans with a value of $US 140.94 million, 366 for foreign direct investment with a value of $US 23.83 million; 297 for other foreign investment with a value of $US 33.24 million.

$US 259.68 million of foreign funds was actually used, down 12.89 per cent against $US 298.11 million in 1989, in which, $US 73.98 million was foreign loans; $US 150.84 million was foreign direct investment and $US 34.86 million was other foreign investment.

In 366 projects of foreign direct investment, 309 were equity joint ventures, 17 were contractual joint ventures and 40 were wholly foreign-owned enterprises. 95 per cent of these projects were productive ones and 5 per cent were non-productive. In term of lines, 308 were industrial projects, 2 were transportation projects, 2 were catering projects, 2 were construction project, 3 were projects for public health and welfare, and 4 were projects of literature and education.

Investors came from 17 countries and regions including Hong Kong, 99 projects, involving $US 119.55 million of investment; Taiwan Province, 48 projects, $US 31.65 million; Japan, 31 projects, $US 26.25 million; the United States, 47 projects, $US 25.42 million; and Republic of Korea, 12 projects, $US 22.07 million.

Up to end of 1990, 387 foreign-invested enterprises were put into operation or production. An output value of RMB 2.026 billion yuan and a turnover of RMB 1.878 billion yuan was fulfilled in the year. RMB 116 million yuan of taxes and profits was realized. The export earning came to $US 137 million.

Technology import and export

162 contracts were signed on the import of technologies and equipments with a contract value of SUS 350 million, 2.5 times more than SUS 99.72 million in 1989. 80.77 per cent of it was paid for equipments, 9.51 per cent for technologies and 9.49 per cent for other items. SUS 88.62 million was actually used, up 1.78 per cent over SUS 87.07 million in 1989. The projects were mainly imported from Japan, the United States, Germany, Italy, the United Kingdom, Belgium, Switzerland, Hong Kong and other countries and regions, mainly involving the sectors as textiles, chemical industry, chemical fibres, machinery, plastic products, oil processing, building material, non-metal mines, electronics, post and telecommunication, printing, tobacco processing, food industry and environment protection, etc.

In 1990, 29 imported projects were put into production. After these projects started production, RMB 400 million yuan of output value and RMB 80.54 million yuan of taxes and profits could be increased. SUS 55.23 million could be earned from export.

In 1990, 31 contracts were signed on technology export with a contract value of SUS 28 million.

Foreign economic cooperation

91 contracts were signed for contracting projects and supplying labour service with a contract value of SUS 33.77 million, 1.4 times more than SUS 13.89 million in 1989; SUS 17.12 million of turnover was fulfilled, up 71.23 per cent over SUS 10 million in 1989. 1,462 people were abroad by the end of the year. Sectors of cooperation covered engineering construction, seamen service, medical and health care, fruit tree plantation, water supply project, ocean fishing, food service and garment processing, etc. The projects contracted scattered in the countries and regions of the United States, Papua New Guinea, Western Samoa, Gambia, Mauritania, Nigeria, Zanzibar, Yemen, Greece, Japan, the former Soviet Union, and Hong Kong, etc.

The Province undertook 5 projects of foreign aid, covering fruit tree cultivation, medical and health care, cane weaving technique, dam project and water supply project, etc. The recipient countries were Ecuador, Western Samoa, Papua New Guinea, Yemen, Mauritania, etc.

The Province carried out 28 projects utilizing aid provided by international organizations or through bilateral agreements with a total value of SUS 19.60 million. The aid was used in agriculture, animal husbandry, cultural and educational projects, etc.

6 non-trade enterprises were set up abroad with a Chinese investment of SUS 4.894 million.

24. SHANGHAI

Shanghai, situated not far south of the Yangtze River Estuary, is one of the world's largest ports and China's biggest manufacturing center. It turns out a long catalogue of products, including steel, aircraft, automobiles, ocean-going ships, machinery, electronic products, electrical household appliances and countless consumer items. It has several economic and technical development zones, and is going to open up the 177 sq km new Pudong Development Zone.

Shanghai is the nation's biggest foreign-trade port, and it is trading with upwards of 160 countries and regions around the globe.

Greater Shanghai consisting of 12 urban districts and nine countries spreads over an area of 6,340 sq km and has population of 12,764,000.

Foreign trade

In 1990, the total export and import volume of Shanghai City was $US 7.427 billion, a decrease of 5.36 per cent from $US 7.848 billion in 1989.

The value of purchased goods for export was RMB 18.418 billion yuan, an increase of 6.89 per cent over RMB 17.23 billion yuan in 1989.

The total export was $US 5.317 billion (including export of the corporations under the central ministries and commissions, the total export of the whole city was $US 5.524 billion), an increase of 5.66 per cent over $US 5.032 billion in 1989, accounting for 34.46 per cent of the City's GNP and 10.21 per cent of the total export of the nation, and ranking the third in the country.

Export goods structure was: agricultural and sideline products, $US 662 million, accounting for 12.45 per cent of the total export; heavy industrial products, $US 1.268 billion, 23.85 per cent; and light industrial products, $US 3.387 billion, 63.70 per cent. As compared with 1989, the export of agricultural and sideline products decreased by 2.46 percentage points, that of heavy industrial products increased by 0.62 percentage points, and that of light industrial products increased by 1.84 percentage points.

There were 101 kinds of commodities each with export value over $US 10 million, totalling $US 3.129 billion, accounting for 58.85 per cent of the total export. Among them, the following 12 items with an export value of over $US 50 million were: cotton polyester blended fabrics, cotton cloth, steel products, hardware, toys, petroleum products, medicine raw materials, silk piece goods, chemical raw materials, tea, bicycles, and tools, totalling $US 1.129 billion, accounting for 21.23 per cent of the total export.

The export commodities were sold to 167 countries and regions.

The total import value was $US 2.11 billion, a decrease of 25.07 per cent from $US 2.816 billion in 1989, of which, $US 2.028 billion was for means of production, taking up 96.11 per cent: and $US 82 million for means of livelihood, 3.89 per cent.

There were 12 kinds of import commodities each with a volume of over $US 50 million, summing to $US 1.292 billion, accounting for 61.23 per cent of the total import. These commodities were steel products, chemical raw materials, auto parts, cotton, knitwear, light industry machinery and their parts and accessories, synthetic fibre, cellulose fibre, complete sets of equipment and import of technology, vegetable oil and animal fat, wool, and non-ferrous metal.

The import commodities came from 52 countries and regions.

Utilization of foreign capital

269 contracts on using foreign capital were signed and approved, involving $US 588 million, a decrease of 51.08 per cent from $US 1.202 billion in 1989.

Out of the 201 foreign direct investment projects, 190 projects were industrial productive with foreign capital of $US 360.25 million, accounting for 94.53 per cent and 96.16 per cent of the total number of foreign direct investment projects and the total value respectively.

By the end of 1990, Shanghai had altogether approved 910 foreign investment enterprises, 742 of which were equity joint ventures, involving $US 1.442 billion; 126 were contractual joint ventures, $US 1.152 billion; and 42 were wholly foreign-owned enterprises, $US 288 million. The foreign investment enterprises were mainly distributed in 8 fields: 717 were industrial projects, 106 were house property, public utilities and consulting projects, 22 were construction projects, and others were commerce and catering, farming, forestry, water conservancy, communications, post and telecommunications, health and sports projects.

Foreign direct investment were from 24 countries and regions. The major investors came from Hong Kong involving in 444 projects, valued at $US 772.54 million; the United States, 122 projects, $US 715.43 million; Japan, 128, $US 407 million; Germany, 11, $US 154.36 million; and Singapore; 30, $US 79.18 million.

Till the end of 1990, 527 foreign investment enterprises had already started production, accounting for 57.91 per cent of the total approved. Of the 527 enterprises, 294 were export-oriented enterprises, and 57 were technologically advanced enterprises. The export earning of the foreign investment enterprises amounted to $US 299 million.

Economic and technological development zone

In April 1990, the State Council decided to develop and open Shanghai Pudong New Area. Pudong New Area is a delta zone of about 350 square kilometres east of Huangpu River, south-west of the mouth of Yangze River, and north of Chuanyang River. It is the largest development zone in China. In September, 9 policies and regulations for encouraging foreign investment in Pudong New Area were promulgated, marking the beginning of a new phase in development and construction of Pudong New Area. Till the end of 1990, there were 55 foreign investment enterprises in Pudong New Area. The contract value was $US 264 million. Out of the 55 enterprises, 18 were approved after April 1990.

Besides Pudong New Area, the original 3 economic and technological development zones had also made stable progress.

Technology import and export

193 contracts on import of technology and equipment were signed with a value of $US 148 million, a decrease of 43.30 per cent from $US 261 million in 1989.

To calculate according to value, the import from the United States took up 29.96 per cent; Japan, 26.0 per cent; Hong Kong, 8.83 per cent Italy, 6.76 per cent and Germany, 6.01 per cent.

In 1990, 69 import projects were completed and put into production. The output value was $US 948 million.

39 contracts on technology export were signed with a value of $US 69.47 million.

Foreign economic cooperation

78 contracts for contracting engineering projects and labour service cooperation were signed with a value of $US 60.1 million, a decrease of 16.46 per cent from $US 71.94 million in 1989. The business turnover was $US 51.13 million, a decrease of 16.42 per cent from $US 61.39 million in 1989. 989 people for labour service were dispatched abroad, a decrease of 51.23 per cent from that in 1989. They were distributed in 65 countries and regions. 2,041 people were still abroad at the end of the year.

The City undertook 9 foreign aid projects. 9 countries including Sudan, Surinam, Ethiopia, Burkina, Faso, Benin, Egypt, etc. received the aids. 150 people were sent abroad, and 97 people were still abroad at the end of the year.

The City accepted 2 aid projects from the United Nations organization and Japan, valuing $US 10.7 million. 28 international economic aid projects of various kinds were undertaken in 1990.

The City funded 7 productive enterprises abroad in 1990 and the Chinese side invested $US 9.89 million.

Table 34. Major export markets

Country/region	*Export value ($US million)*	*Percentage of the total export*
Hong Kong	1,029.61	19.36
Japan	759.08	14.28
United States	745.33	14.02
Germany	229.76	4.32
Singapore	182.11	3.43
Former Soviet Union	173.64	3.27

25. SICHUAN PROVINCE

This most populous province in China, which has a population of 107.143 million of 1/10 of the Chinese population, sprawls over an area of 570,00 sq km on the upper reaches of the Yangtze River in South-west China. It is an important producer of rice and industrial crops. In the center of the province is a flat alluvial plain.

Foreign trade

In 1990, the total export and import volume of Sichuan was $US 1.363 billion, an increase of 6.24 per cent over $US 1.283 billion in 1989.

The total export purchasing volume was RMB 5.686 billion yuan, an increase of 16.3 per cent over RMB 4.889 billion yuan in 1989.

The total export volume was $US 1.116 billion, an increase of 17.6 per cent over $US 949 million in 1989, accounting for 5.85 per cent and 2.14 per cent of the Province's GNP and the total export volume of the whole country respectively.

The structure of the export commodities was: agricultural and sideline products, valuing $US 104.92 million and accounting for 9.4 per cent of the total export; light industrial products, $US 573.86 million, 51.4 per cent; and heavy industrial products $US 437.42 million, 39.2 per cent. By SITC system, primary products valued $US 389.43 million, accounting for 34.9 per cent of the total export, and manufactured industrial products, $US 726.77 million, 65.1 per cent.

The export commodities were sold to 112 countries and regions. The first ten major export markets were Hong Kong, Japan, Germany, the former Soviet Union, the United States, Italy, Thailand, Singapore, the Netherlands and France, totalling $US 891.17 million, accounting for 79.84 per cent of the total export.

The total import volume was $US 247 million, a decrease of 25.93 per cent from $US 333.49 million in 1989. Of which, $US 193.08 million was for means of production, accounting for 78.17 per cent of the total import; and $US 53.92 million for means of livelihood, 21.83 per cent. By SITC system, $US 41.05 million was for primary products, accounting for 16.62 per cent of the total import; and $US 205.95 million for manufactured industrial products, 83.38 per cent.

The main import goods were: steel products, automobiles, and motorcycles (accessories), chemical raw materials, cotton, complete sets of equipment, electronic components, metal ores, kinescope, pharmaceutical raw materials, palm oil, light industrial machinery, power equipment, medical apparatus, video recorders, etc., totalling $US 184.9 million, and accounting for 74.86 per cent of the total import.

The import commodities came from 26 countries and regions. The main import markets were the following 10 countries and regions: Japan, Hong Kong, Australia, the United States, Germany, Mozambique, Singapore, Canada, Italy and the United Kingdom, totalling $US 223.12 million, accounting for 90.33 per cent of the total import value.

Utilization of foreign capital

172 contracts on utilizing foreign capital were signed and approved, valuing $US 317.04 million, an increase of 2.5 times over $US 90.5 million in 1989. Of them, 10 were foreign loans with a total value of $US 137.79 million; 134 were foreign direct investment, $US 100.56 million; and 28 were foreign investment in other forms, $US 78.69 million.

In 1990, the actually used foreign funds was $US 183.36 million, an increase of 19 times over $US 9.09 million in 1989, of which, $US 158.57 million was foreign loans, $US 16.04 million was foreign direct investment, and $US 8.75 million was other foreign investment.

Among the 134 foreign direct investment projects, 68 were equity joint ventures, 35 were contractual joint ventures, and 31 were wholly foreign-owned enterprises. 127 were productive enterprises, and 7 were non-productive projects. They were involved in such trades as communications, chemical industry, pharmacy, building material, electromechanics, light industry and textile, garments, etc.

The foreign direct investment came from the following countries and regions: Hong Kong, France, the United States, Japan, Singapore, Taiwan Province and the Republic of Korea.

By the end of 1990, 280 foreign-invested enterprises went into operation. $US 35.21 million was earned from export in 1990.

Technology import and export

53 contracts on import of technology and equipment were signed with a total value of $US 57.86 million, an increase of 60.19 per cent over $US 36.12 million in 1989. $US 43.53 million was actually used, a decrease of 0.91 per cent from $US 43.93 million in 1989. The import projects came from 11 countries and regions such as Japan, Germany, the United States, France, Switzerland, the United Kingdom, Italy, Australia, and Hong Kong. They were involved in such trades as light industry and textile, electromechanics, communications, machinery, electronics, and pharmacy.

Foreign economic cooperation

110 contracts for contracting projects and labour service cooperation were signed with a total contract value of $US 228.85 million, an increase of 38.10 per cent over $US 165.71 million in 1989. The business turnover was $US 166.18 million , an increase of 53.60 per cent over $US 108.19 million in 1989. 3,631 people for contracting projects and labour service were dispatched abroad, and 5,375 people were still working abroad at the end of the year. They were sent to 52 countries and regions including the former Soviet Union, Pakistan, Indonesia, Bangladesh, Yemen, Nepal, Germany, etc. The contracting projects were installation of the 210,000 KW generator sets and construction of a 300,000-ton chemical fertilizer plant in Bangladesh, and erection of 500,000 KW power transmission line in Pakistan.

The Province undertook 9 foreign aid projects, involving in road construction, geological prospecting, building, agriculture, telecommunications, etc. Countries that received aids were Nepal, Benin, Kenya, Vanuatu, Ethiopia, Mali, etc. 457 people were dispatched abroad for foreign aid projects, and 767 people were abroad at the end of the year.

The province received 37 foreign aid projects with $US 5.2 million of foreign-invested funds from the United Nations and other countries. Among them, 4 were provided by UNFPA, 19 by UNICEF, 5 by UNDP, 1 by WHO, 5 by other countries, and 3 by friendly non-governmental organizations.

13 enterprises were set up abroad. The Chinese side invested $US 5.74 million.

Table 38. List of commodities each with the export value of over $US 10 million

Classified by value	*Name of commodities*	*Export value ($US million)*	*Percentage of total export*
Over $US 15 million (10 kinds)	Raw silk, steel products, frozen pork, silk piece goods, electronic components, chemical raw material, garments, Chinese crude drugs, aluminium plates, ferroalloy	368.07	32.98
Between $US 10-15 million (7 kinds)	Canned pork, antibiotics, canned vegetable, mulberry silkworm cocoon, vegetable, cotton grey cloth, feather and down	85.98	7.70

26. TIANJIN

Bijing, Tianjin is at once a big manufacturing center and an important foreign-trade port though which passes a good part of north China's seaborne commerce. With newly added dockside facilities, Tianjin's new harbour, now handles 24 million tonnes of cargo a year. The city has also a large-sized economic and technological development zone where many foreign-funded operations have been, or are being established. Tianjin and the adjacent counties, over which it exercises jurisdiction, have an area of 11,305 sq km and a population of 8,523,500 at year-end in 1989.

Foreign trade

The total value of export and import in Tianjin in 1990 was $US 2.21 billion, decreasing by 0.18 per cent over $US 2.214 billion in 1989.

The export commodity purchasing value was RMB 6.487 billion yuan, increasing by 17.33 per cent over RMB 5.529 billion yuan in 1989.

The export value was $US 1.786 billion (including the export of the companies of central ministries and commissions in Tianjin, the total export value of the city was $US 1.92 billion) up 5.93 per cent as compared with $US 1.686 billion in 1989,representing 28.76 per cent of the city's GNP and 3.43 per cent of the total national export value, ranking the eighth.

The structure of the export commodities was: agricultural and sideline products, with total amount of $US 301 million, accounting for 16.85 per cent of the total export value; light industrial products, $US 812 million, 45.47 per cent; heavy industrial products, $US 673 million, 37.68 per cent. As compared with that in 1989, the proportion of agricultural and sideline products, and heavy industrial products in the total exports increased by 0.6 percentage points and 1.78 percentage points respectively, and the proportion of light industrial products decreased by 2.48 percentage points. If divided according to the international trade standard classification, the export value of primary products was $US 343 million, accounting for 19.2 per cent of the total; and of industrial manufactured products was $US 1.443 billion, 80.8 per cent.

There were 40 kinds of commodities each with the export value over $US 10 million, including garments, carpets synthetic blending fabrics, cotton cloth, colour TV sets, cotton knitwear, dyestuffs, prawn, refractories material, Chinese herbs, machinery equipment, chemical raw materials. The total value was $US 1.015 billion, taking up 56.83 per cent.

The markets for the export commodities were over 158 countries and regions.

The import value totalled $US 424 million, down by 19.7 per cent over $US 528 million in 1989. The structure of import commodities was: means of production, with the import value of $US 354 million, accounting for 83.49 per cent of the total; means of livelihood, $US 70 million, 16.51 per cent. If divided by the International Trade Standard Classification, primary products, with the total amount of $US 114 million, took up 26.89 per cent of the import value; and industrial manufactured products, $US 310 million, 73.11 per cent.

The main import commodities were TV set and audio systems equipment, $US 45.31 million; cotton, $US 44.24 million; rolled steel, $US 42.93 million; raw materials for chemical industry, $US 26.86 million; synthetic fabrics and cotton knitwear, $US 25.23 million, animal oils and vegetable oils, $US 24.92 million; wool, $US 17.47 million; electronic computers, $US 12.55 million and motorcar and motorcycle, $US 13.07 million. The import value reached $US 252.58 million, accounting for 59.57 per cent of the total import commodities coming from 36 countries and regions.

Utilization of foreign capital

136 contracts for the utilization of foreign capital were approved and the contract value was $US 178.54 million, down by 15.84 per cent as compared with $US 212.14 million in 1989. Among them, 2 projects were in the form of foreign loans with the value of $US 45 million; 129 projects were in foreign direct investment with $US 131.65 million; 5 projects were in other forms of foreign investment with $US 1.89 million.

The actual utilization of foreign investment was $US 83.63 million, decreasing by 74.85 per cent against $US 160.36 million in 1989. Among them were, foreign loans, $US 46.7 million; foreign direct investment, $US 34.93 million; other foreign investment, $US 2 million.

Among the 129 projects with foreign direct investment, 70 were equity joint ventures, 2 were contractual joint ventures and 57 were wholly foreign-owned enterprises. Of these projects, 118 were industrial productive enterprises and 11 projects were in commerce, service trade, transportation and agriculture, etc.

The investment were mainly from countries and regions, such as Hong Kong, 67 projects; Japan, 12 projects; the United States, 13 projects, Taiwan Province; 17 projects; and Republic of Korea, 5 projects.

By the end of 1990, 550 foreign-invested enterprises were approved with the total contract value of $US 582.63 million. Among them, 431 were equity joint ventures, 25 were contractual joint ventures and 94 were wholly foreign-owned enterprises. Of these projects, 447 were industrial productive enterprises, 55 were in line of commerce and service trade, 10 in transportation, 10 in agriculture, 11 in building industry and 17 in other fields. At present, 236 foreign-invested enterprises started operation in the city. The total annual turnover reached RMB 2.058 billion yuan and foreign exchange earning was $US 90.98 million.

Economic and technological development zone

Capital contribution worth RMB 32.06 million yuan was completed in the year, mainly for perfecting the complementary facilities in the industrial and living areas, including the construction of road, water supply and drainage network, and on-the-ground building.

The development zone has realized a total social output value of RMB 919.17 million yuan, industrial output value of RMB 780.6 million yuan and foreign exchange earnings of $US 63.7 million.

The zone approved 57 contracts for the utilization of foreign capital with the value of $US 95.17 million and 127 enterprises of such kind have been put into operation. The total industrial output for the year was RMB 688.6 million yuan. The total export value was $US 45.92 million.

Technology import and export

127 contracts on import of technology and equipment were signed with a total value of $US 91.17 million, up by 2 times over $US 30.89 million in 1989.

The imports mainly came from 15 countries and regions, such as the United States, $US 30.12 million; Germany, $US 10.79 million; Austria, $US 10.73 million; Japan $US 10.21 million; France, $US 6.55 million; totalling $US 68.4 million, accounting for 75.02 per cent of the total value for technology and equipment imports.

The import of technology and equipment has gone into fields like machinery, electronics, metallurgy, chemical industry, textiles, food industry, light industry, pharmaceuticals, post and telecommunications, etc. 96 projects were completed and put into operation in 1990, with output value of RMB 248 million yuan.

18 contracts on the technology export were signed with the contract value of $US 19.37 million, increasing 241 times against $US 80,000 in 1989.

Foreign economic cooperation

198 contracts for projects and labour service abroad were signed with contract value of $US 57.38 million, up 1.2 times over $US 26.23 million in 1989. Business turnover was $US 28 million, up 43.52 per cent against $US 19.51 million in 1989. 3,176 labour service personnel remained abroad by the end of the year, covering countries and regions such as Japan, the United States, Hong Kong, Singapore, Germany and former Soviet Union.

455 sets of mechanical and electrical equipment were provided for 31 projects in 23 recipient countries.

4 overseas enterprises were established last year, involving $US 5.6 million investment from Chinese side. The main projects were Seagull Precision Timer Corporation Ltd. and a fishery company, in Indonesia, the Pacific Shipping Company Ltd. in Panama and Friendship Corporation in the former Soviet Union.

Table 39. Main markets for Tianjin's export

Country/region	*Import value ($US million)*	*Percentage of the total*
Hong Kong	351.63	19.69
Japan	244.93	13.71
United States	227.46	12.74
Germany	101.23	5.67
Former Soviet Union	62.55	3.50

Malaysia	5.00	1.18
Italy	4.03	0.95

27. TIBET AUTONOMOUS REGION

Spreading over an area of 1,228,400 sq km north of Bhutan, Sikkim and Nepal.

The population at year-end in 1989 was 2,150,000. Lhasa is the regional capital.

Highland barley and other crops are cultivated in the sheltered valleys of eastern Tibet, while sheep, cattle and yak, an ox-like, hairy animal, are pastured on the vast grasslands in northern Tibet. Many mineral deposits have been discovered, and the ones with the biggest reserves are chromite, copper, boron and gypsum. There are also deposits of lithium, known as the aristocrat of metals used in nuclear reactions and metallurgy. Tibet has the biggest reserve of geothermal energy in China, some of which are being harnessed to generate electricity.

Tibet, which had no industry a few decades ago, produced goods worth RMB 330 million in 1989. Cement production reached 120,000 tonnes, almost enough to meet local needs.

Foreign trade

In 1990, the total value of import and export of Tibet Autonomous Region reached $US 30.2192 million, a decrease of 1.. per cent compared to the $US 30.67 million in 1989.

The purchase value of export commodities amounted to RMB 69.18 million yuan, a decrease of 37.34 per cent against RMB 110.41 million yuan in 1989.

The total value of export was $US 13.94 million, a decrease of 10.35 per cent against $US 15.55 million in 1989, accounting for 2.97 per cent of GNP in Tibet Autonomous Region, 0.03 per cent of national export value.

Table 41. List of export commodities structure

Classified by agriculture, light and heavy industries				*Classified by standard of international trade*			
Category	*Export value ($US million)*	*Percentage of the total export value*		*Category*	*Export value ($US million)*	*Percentage of the total export value*	
		1990	*1989*			*1990*	*1989*
Agricultural and sideline products	12.78	91.67	91.44	Primary products	12.81	91.92	95.88
Light industrial products	1.10	7.92	3.99				
Heavy industrial products	0.06	0.41	4.57	Industrial manufactured products	1.13	8.08	4.12

The commodities each with export value exceeding $US 1 million were sheep wool, dehaired goatwool, cordiceps sinensis, totalling $US 11.29 million, making up 80.99 per cent of the total export value.

The commodities were mainly exported to the following countries and regions: Hong Kong, Japan, Thailand, Malaysia, Nepal, Singapore, Germany, France, the Netherlands, Italy, the United Kingdom, Switzerland and the United States.

The total import value amounted to $US 16.28 million, up 7.67 per cent over $US 15.12 million of 1989, among which, $US 9.98 million of means of production, made up 61.28 per cent of the total import value; $US 6.30 million of means of livelihood, made up 38.72 per cent. Classified by standard of international trade, the primary products reached $US 250,000, making up 1.51 per cent of the total import value; $US 16.03 million for industrial manufactured products, accounting for 98.49 per cent.

The imported goods were mainly as follows: $US 5.29 million for automobile and its components, making up 32.51 per cent of the total import value; $US 3.11 million for steel products, accounting for 19.10 per cent; $US 1.73 million for pesticide, occupying 10.64 per cent; $US 1.08 million for textile products, making up 6.63 per cent.

The main import markets were Japan, Nepal, Hong Kong, and Brazil with total value of $US 15.89 million, making up 97.62 per cent of the total import value.

In 1990, the total value of import and export in Tibet's border trade amounted to $US 9.02 million, a decrease of 18.15 per cent compared with $US 11.02 million in 1989. The main export commodities were animal by-products, native produce, textile products, and light industrial products. The main import goods were cereals, oils and foodstuffs, articles for minority nationality, household electrical appliances, etc.

Utilization of foreign capital

In 1990, 1 contract was approved to utilize foreign investment with a value of $US 150,000. This project was processing of animal by-products. The investment came from Nepal.

Foreign economic cooperation

Tibet Autonomous Region accepted 5 projects of international aid with a total value of $US 6.78 million. Among them, 3 projects were from the United Nations Children's Fund and other international organizations with a total value $US 5.40 million; and 2 projects were from the bilateral aid with a total value of $US 1.38 million. The above-mentioned projects have been performed completely.

28. XINJIANG UYGUR AUTONOMOUS REGION

Spreading over an immense area of 1.6 million sq km, or 1/6 the total territory of China, this autonomous region in far west China has a population of 14,541,600, of whom 6,827,300 are Uygur, 5,531,600 are Han, and 1,087,900 are Kazak. The rest numbering 1,094,800 is made up of people of the Hui, Mongolian, Kirgiz, Tajik, Xibe, Manchu, Tatar, Russian and other ethnic groups. The regional capital is Urumqi, a city situated in almost the very center of the Euro-Asian landmass and more than 2,500 km from the east Chinese coast.

Xinjiang is a vast land which abounds in minerals. The principal minerals are petroleum, coal, aluminium and non-ferrous metals of all kinds. Rich petroleum reserves have been found in Xinjiang's Junggar and Tarim basins. The region produces plenty of melons, seedless raisins, wool and long-stapled cotton and has extensive tracts of grassland.

Foreign trade

Xinjiang's total export and import value in 1990 was $US 410.86 million, a decrease of 15.53 per cent over 1989's $US 486.39 million.

Goods purchased for export totalled RMB 889.01 million yuan, up 16.96 per cent as against RMB 760.1 million yuan in 1989.

The total export value reached $US 335.91 million, a decrease of 6.93 per cent compared with 1989's $US 360.94 million. The export value took up 6.38 per cent of the Autonomous Region's GNP of RMB 25.188 billion yuan and 0.65 per cent of the total export value of the whole country.

There were 43 items of major products each with an annual export value exceeding $US 1 million each. Among the 43 varieties, there were 12 items each with export value over $US 5 million. They were cotton, cotton yarn, cashmere sweater, woolen sweater, cotton cloth, casings, canned tomato ketchup, carpet, lithium carbonate, licorice root ointment, cotton polyester frocks and down clothes, totalling $US 217.97 million which took up 64.89 per cent of the total export value. Commodities were exported to 42 countries and regions.

Table 42. Composition of export commodities

Classified according to agricultural industrial product				*Classified according to international trade standard*			
Item	*Export value ($US million)*	*Percentage of the total*		*Item*	*Export value ($US million)*	*Percentage of the total*	
		1990	*1989*			*1990*	*1989*
Agricultural & sideline products	182.42	54.31	57.2	Primary products	201.41	59.96	60.00
Agricultural & sideline manufactured products	104.41	31.08	28.5				
Industrial & mineral products	49.08	14.61	14.3	Industrial manufactured products	134.50	40.04	40.00

Table 43. Major export markets

Country/region	*Export value ($US million)*	*Percentage of the total*
Japan	106.05	31.57
Former Soviet Union	72.81	21.68
Hong Kong	57.68	17.17
Germany	13.34	3.97
America	13.15	3.92
Czechoslovakia	11.26	3.35

Imported goods were $US 74.95 million, a decrease of 40.26 per cent as against $US 125.46 million in 1989. Of the imported goods, means of production totalled $US 66.26 million, making up 88.41 per cent of the total imports; and materials of livelihood reached $US 8.69 million, making up 11.59 per cent. According to the classification for international trade standard, primary products were $US 1.76 million, taking up 2.34 per cent of the total imports, whereas the industrial manufactured products amounted to $US 73.20 million, making up 97.66 per cent.

Major imports covered 10 varieties, such as, ammonium phosphate, diammonium phosphate, thick steel plate, thin steel plate, section steel, auto parts, urea, kinescope, medical appliances, etc., totalling $US 62.52 million, making up 83.42 per cent of the import value.

Commodities imported came from 13 countries and regions.

Table 44. Major import markets

Country/region	*Import value ($US million)*	*Percentage of the total*
Former Soviet Union	47.36	63.19
Hong Kong	14.39	19.20
Japan	8.77	11.70
United States	1.54	2.05

Xinjiang's total trade with the former Soviet Union was $US 120.17 million, almost the same as that of 1989, making up 29.25 per cent of Xinjiang's total trade. Of the total with the former Soviet Union, the export was $US 72.81 million, and import was $US 47.36 million.

1990 saw the total border trade of $US 71.38 million; that with the former Soviet Union was $US 69.81 million (of which, the export was $US 34.65 million), and that with Pakistan was $US 1.57 million (of which, the export totalled $US 1.14 million). Of the border trade, the major exports were thermos bottles, garments, knitwear, woolen sweater, etc. and major imports were chemical fertilizers, steel products, automobiles, etc.

Utilization of Foreign Capital

In 1990, 9 contracts were signed and approved for utilization of foreign capital with a contracted foreign investment of $US 264.46 million, 6.6 times more than 1989's $US 34.76 million. Of the said contracts, 2 were foreign loans with a value of $US 206.06 million; 6 were involved with foreign direct investment totalling $US 57.61 million; 1 was involved in other foreign investment valuing $US 79,000. The actual utilization of foreign capital amounted to $US 17.21 million, a decrease of 61.59 per cent as against $US 44.735 million in 1989. Of the total actually-utilized foreign capital, foreign loans involved $US 10.54 million; foreign direct investment, $US 5.95 million; and other foreign investment, $US 72,000.

Of the 6 contracts with foreign direct investment, 5 were joint ventures and 1 was wholly foreign-owned enterprise. Sectors invested were production-oriented, and mainly covered: textile industry, 4; building materials, 1; and fodder, 1. The foreign capital came from Canada and Spain.

In 1990, the export value of foreign-invested enterprises that were in operation was $US 19.61 million, constituting 5.84 per cent of Xinjiang's total export.

Technology import and export

8 contracts were signed for introduction of technology and import of equipment with a contracted value of $US 5.73 million, a decrease of 40.35 per cent compared with $US 9.60 million in 1989. The projects mainly imported from Japan, the United States, Germany, Italy and the former Soviet Union.

Foreign economic cooperation

19 contracts were signed involving contracting projects and labour service, with a contracted value of SF4.09 million and SF4.09 million, and the turnover was realized in the year. 1,100 technicians and labour service workers were sent abroad, and 290 remained working abroad in the end of the year.

Projects executed were: residence and hotel construction and maintenance projects in the former Soviet Union and a cement factory in Mongolia.

In 1990, 2 non-productive enterprises were set up in the former Soviet Union with Chinese capital of $US 1.20 million.

In 1990, Xinjiang received an amount of $US 1.25 million from the United Nations Population Fund for women's participation and development and 2 aid given gratis from the Japanese Government involving 1.519 billion Japanese Yen.

29. YUNNAN PROVINCE

Yunnan, a very mountainous province in southwestern Chian, has a common border of 4,060 km with Myanmar, Lao People's Democratic Republic and Viet Nam. It covers an area of 394,000 sq km with 36.48 million people of the Han nationality and the Yi, Bai, Hani, Zhuang, Dai, Miao and 18 other ethnic minorities.

Foreign trade

The import and export volume of Yunnan Province in 1990 totalled $US 751.14 million, decreased by 6.35 per cent from $US 802.09 million in 1989.

The value of products purchased for export was RMB 2.344 billion yuan, increased by 12.69 per cent over RMB 2.08 billion yuan in 1989.

The export volume totalled $US 562.41 million, increased by 4.41 per cent over $US 538.63 million in 1989, accounting for 6.91 per cent of the Province's GNP and 1.08 per cent of the national export value.

Table 45. Export commodity structure

Classified by agriculture, light and heavy industries				*Classified by international trade standard*			
Category	*Export value ($US million)*	*Percentage of the total*		*Category*	*Export value ($US million)*	*Percentage of the total*	
		1990	*1989*			*1990*	*1989*
Agricultural & sideline products	65.53	11.65	18.6	Primary products	233.37	41.49	31.3
Light industrial products	288.10	51.23	48.7				
Heavy industrial products	208.78	37.12	32.7	Industrial manufactured products	329.04	58.51	68.7

There were 51 items of commodities, with export value of each item exceeding $US 1 million. The total value of these commodities amounted to $US 367.68 million, accounting for 65.38 per cent of the total. Of them, the export value of cigarette exceeding $US 30 million, amounted to $US 140.95 million, accounting for 25.06 per cent of the total. The export value of tin, tea, machine tools, heavy calcium and shouldering tin ranged from $US 10-30 million respectively, totalling $US 87.88 million and accounting for 15.63 per cent of the total. The export value of phosphorous ore, jade ornaments, garments, kidney beans, calcium magnesium phosphate, phosphor, flue-cured tobacco, antimony ingots and telescopes ranged from $US 5-10 million, totalling $US 58.03 million and accounting for 10.32 per cent of the total.

The commodities were exported to 69 countries and regions, 9 countries more than that of 1989.

Table 46. Main export markets

Country/region	*Export value ($US million)*	*Percentage of the total*
Myanmar	142.73	25.38
Hong Kong	96.28	17.12
Japan	68.45	12.17
United States	22.12	3.93
Former Soviet Union	19.12	3.40
Singapore	9.33	1.66
Thailand	9.28	1.65
United Kingdom	8.18	1.45

The total import volume was $US 188.73 million, a decrease of 28.36 per cent from $US 263.46 million in 1989. Of the total, means of production were valued at $US 89.06 million, accounting for 47.19 per cent of the total; means of livelihood $US 99.67 million, 52.18 per cent. Classified by international trade standard, the value of primary products amounted to $US 78.57 million, accounting for 41.63 per cent of the total; and the value of industrial manufactured products was $US 110.16 million, 58.37 per cent.

Major imports were agricultural products with the value of $US 68 million, accounting for 36.03 per cent of the total; tobacco and cigarette subsidiary materials, $US 22.4 million, 11.90 per cent; technology and complete equipment, $US 22.37 million, 11.85 per cent; various kinds of machinery, $US 14.05 million, 7.45 per cent; and raw materials for arts and crafts $US 10.14 million, 5.40 per cent.

The commodities were imported from 22 countries and regions.

Table 47. Main import markets

Country/region	*Import value ($US million)*	*Percentage of the total*
Myanmar	72.92	38.64
Hong Kong	29.43	15.59
United States	21.64	11.47
Germany	12.36	6.55
Japan	11.14	5.90
Finland	7.83	4.15
France	6.81	3.61
Australia	6.58	3.49
United Kingdom	6.17	3.27

Yunnan's total import and export value of the border trade was $US 202.72 million, a decrease of 20.38 per cent from $US 254.62 million in 1989. Of the total, the export value amounted to $US

127.92 million, and the import value amounted to $US 74.80 million. The total import and export value of the border trade with Myanmar reached $US 195.72 million, accounting for 96.54 per cent of the total border trade value (export value, $US 123.52 million and import value, $US 72.20 million). The total import and export value of the border trade with the Lao People's Democratic Repubic was $US 7 million, accounting for 3.46 per cent of the total (export value, $US 4.4 million and import value, $US 2.6 million).

Utilization of foreign capital

36 contacts on using foreign capital were signed and approved with the contract value of $US 4.51 million, an increase of 3.38 per cent over $US 4.3626 million in 1989. Of the total, 11 were contracts of foreign direct investment with the total value of $US 2.53 million; 25 were of other foreign investment with the total value of $US 1.98 million.

The foreign investment actually utilized was $US 7.38 million, a decrease of 6.25 per cent from $US 7.872 million in 1989, of which, the amount of foreign direct investment was $US 2.61 million, and other foreign investment was $US 4.77 million.

Among 11 projects of foreign direct investment, 7 were equity joint ventures, and 4 were exclusively foreign-owned enterprises. All of them were productive. Of these projects, 2 were involved in plantation, 2 in chemical industry, 1 in garment processing, casting, photographic plate making and food processing, respectively. The investors mainly came from Hong Kong, Taiwan Province, Singapore and the United States.

Technology import and export

14 contracts of technology and equipment import were signed and approved with the contract value of $US 63.926 million, increased by 1.23 times over $US 28.6271 million in 1989. The foreign exchange actually used amounted to $US 22.38 million, decreased by 30.90 per cent from $US 32.39 million in 1989. The major projects were involved in cigarette packing line, cigarette machine, tray filler, soft packing machine, compound filler up production line, printing machinery, etc., 3 of them were introduced from Germany with the value of $US 29.18 million; 4 from the United Kingdom, $US 24.00 million; and 1 from Italy, $US 5.90 million.

Foreign economic cooperation

23 contracts of foreign engineering contracting and labour service were signed and approved with the contract value of $US 6.8674 million, a decrease of 2.05 per cent from $US 7.0113 million in 1989. The turnover was $US 4.5161 million, an increase of 30.81 per cent over $US 3.4525 million in 1989. At the end of the year, 10 people remained abroad. Yunnan mainly undertook the construction of a teaching building of a university and Point Monies Bridge in Mauritius, the water treatment project in Pakistan, the second resident building in Maldives, and the runway transformation project of Nam Tha Airport in the Lao People's Democratic Republic.

Yunnan Province undertook 5 projects of foreign aid in Mauritius, Cameroon and Maldives. 23 people for foreign aid were sent abroad. At the end of the year, 35 people remained abroad.

The Province received 11 assistant projects from international organizations and bilateral-aid projects with the value of $US 17 million.

8 enterprises were approved to be set up in Mauritius, Bolivia, Myanmar, the United States, Tanzania and Australia. The total Chinese investment amounted to $US 2.1 million.

30. ZHEJIANG PROVINCE

Lying on the East China coast south of the Yangtze River Estuary, Zhejiang Province is a land of rice and fish, and is well-known for its silk and tea. Off its long coastline are 2,164 islands, the most famous ones being the Zhoushan – one of China largest fishing grounds. The important ports along the coast are Ningbo and Wenzhou. The province occupies an area of 101,800 sq km and has a population exceeding 40,000,000. The provincial capital is Hangzhou, a tourist center with its picturesque West Lake.

Foreign trade

The total export and import volume of Zhejiang Province in 1990 was $US 2.55 billion, an increase of 9.49 per cent over $US 2.329 billion in 1989.

The export commodities purchasing value was RMB 13.891 billion yuan, an increase of 27 per cent over RMB 10.938 billion yuan in 1989.

The export value was $US 2.259 billion, an increase of 20.22 per cent over $US 1.879 billion in 1989, accounting for 13.16 per cent of the province's GNP and 4.34 per cent of the total export of the whole country, and ranking the sixth in China.

Table 48. Structure of export commodities

By agriculture, light and heavy industries				*By SITC system*			
Item	*Export value ($US million)*	*Percentage of total export*		*Category*	*Export value ($US million)*	*Percentage of total export*	
		1990	*1989*			*1990*	*1989*
Agricultural & sideline products	305.71	13.5	14.4	Primary products	627.52	27.8	32.1
Light industrial products	1,645.94	72.9	69.1				
Heavy industrial products	307.69	16.5	16.5	Manufactured industrial products	1,631.82	72.2	67.9

The export commodities were sold to 134 countries and regions. Of them, 21 countries bought commodities valuing more than $US 10 million each, totalling $US 1.955 billion, and accounting for 86.54 per cent of the total export.

Table 49. Commodities each with export value over $US 5 million

Classification by value	*Name of commodities*	*Export value ($US million)*	*Percentage of total export*
Over $US 100 million (4 kinds)	Garments, silk and satins, mulberry silk, tea.	630.29	27.90
Between $US 50-100 million (3 kinds)	Cotton cloth, aquatic products, canned goods.	234.46	10.38
Between $US 10-50 million (30 kinds)	Hardware, cotton knitwear, cotton manufactured goods, vegetables, petroleum products, cotton/polyester blended fabrics, straw products, wool knitwear, B/W TV sets, gasoline, tools, leather garments, down products, colour bulbs, small-sized complete sets of equipments, art shoes, silk knitwear, fluorspar in lumps (in powder), artificial silk products, cement, locks, nylon umbrellas, bearings, cotton yarn, rabbit hair, pesticide, and toys.	630.86	27.93
Total		**1,495.61**	**66.21**

Table 50. Major export markets

Country/region	*Export value ($US million)*	*Percentage of total export*
Hong Kong	659.83	29.21
Japan	345.19	15.28
United States	226.63	10.03
Germany	137.20	6.07
Former Soviet Union	94.94	4.20
Italy	67.53	2.99
Singapore	67.46	2.99
France	53.50	2.37
Switzerland	36.78	1.63
Morocco	36.76	1.63
Total	**1,725.82**	**76.40**

The total import value was $US 290.81 million, a decrease of 35.39 per cent from $US 450.12 million in 1989, of which, $US 277.96 million was for means of production, accounting for 95.58 per cent of the total import; and $US 12.85 million was for means of livelihood, accounting for 4.42 per cent. By SITC system, $US 105.44 million was for primary products, accounting for 36.26 per cent of the total; and $US 185.37 million for manufactured industrial products, 63.74 per cent.

Major import commodities were: chemical raw materials valuing $US 38.77 million; cotton, $US 36.46 million; complete sets of equipment and various kinds of machinery, $US 18.40 million;

electronic computers and various kinds of instruments, $US 18.13 million; synthetic fibre, $US 15.63 million; ores, $US 11.27 million; and rubber, $US 10.24 million. The sum was $US 148.9 million, accounting for 50.12 per cent of the total import value.

Table 51. Major import markets

Country/region	*Import value ($US million)*	*Percentage of total import*
Hong Kong	135.19	46.49
Japan	58.52	20.12
United States	29.40	10.11
Germany	16.03	5.51
Australia	10.99	3.78
Taiwan Province	7.30	2.51
Malaysia	4.51	1.55
The Netherlands	3.63	1.25
Macau	3.50	1.20
Singapore	3.02	1.04
Total	**272.09**	**93.56**

Utilization of foreign capital

317 contracts on using foreign capital were signed and approved. Contract value was $US 164.91 million, a decrease of 48.34 per cent form $US 319.23 million in 1989, of which, $US 30.02 million were foreign loans, $US 133.13 million were foreign direct in vestment for 294 projects, and $US 1.76 million were other foreign investment for 23 projects.

The actually used foreign funds was $US 79.17 million, a decrease of 71.77 per cent from $US 280.45 million in 1989, of which, foreign loans was $US 30.02 million, foreign direct investment was $US 48.44 million, and foreign investment in other forms was $US 710,000.

Among the 294 foreign direct investment projects, 249 were Chinese-foreign equity joint ventures, 15 were contractual joint ventures, and 30 were wholly foreign-owned enterprises. Or 287 were productive enterprises and 7 were non-productive projects. To classify by trade, 92 were for textile and garments, 50 for machinery and electronics, 35 for arts and crafts, 20 for light industry, 11 for chemical industry, 5 for culture and education, 5 for instruments and meters, 4 for building materials, 3 for transportation and storage, 2 for agriculture, 1 for scientific research and technical service, and 76 for others.

The investment came from 16 countries and regions. The major investors were Hong Kong involving in 169 projects, valuing $US 69.8 million; Taiwan Province, 60 projects, $US 30.09 million; Singapore, 5 projects, $US 12.41 million; the United States, 22 projects, $US 6.92 million; Japan, 18 projects, $US 4.5 million; Canada, 3 projects, $US 1.15 million; and Macau, 3 projects, $US 740,000.

By the end of 1909, 407 foreign investment enterprises went into operation. The business turnover was RMB 2.36 billion yuan, the profit was RMB 90.07 million yuan, and the export earning was $US 149 million.

Technology import and export

143 contracts on import of technology and equipment were signed with a value of $US 72.12 million, an increase of 1.13 times over $US 33.81 million in 1989.

10 contracts on export of technology were signed with a value of $US 17.21 million. Major exports were power machinery, electric power generating equipment, pharmaceutical equipment, heavy machinery, etc.

Foreign rconomic vooperation

The Province signed 68 contracts for contracting engineering projects and labour service cooperation, valuing $US 24.05 million, an increase of 25.20 per cent over $US 19.21 million in 1989. The business turnover was $US 15.43 million, a decrease of 17.71 per cent from $US 18.75 million in 1989. 2,700 people were dispatched abroad in 1990, and 1,352 people were still abroad at the end of the year. Most of them were sent to countries and regions such as Kuwait, Iran, Yemen, Japan, Hong Kong, Austria, Germany, Fiji, Sierra Leone and Australia, and coastal countries of West Africa. Main contracting projects were construction of villas and apartment buildings in Kuwait City, Chinese Gardens in Japan, Esfahan Hydropower Station in Iran, and Fiji hydroelectric project, etc.

The Province undertook 10 foreign aid projects, involving in hydropower, construction, agriculture, etc. More than 100 people were sent abroad for foreign aid. Countries that received aids were Fiji, Sierra Leone, Myanmar, Mali, Uganda, and Central Africa. The 47 km 11KV power transmission line of Power Network in Fiji and the Myanmar Cultural Theatre were completed.

The Province received 18 foreign aid projects with $US 2.61 million of foreign funds from international organizations and other countries, of which, $US 2.11 million was from international organizations and $US 500,000 was from other countries.

2 overseas enterprises were approved and established. The Chinese side invested $US 760,000. By the end of 1990, 10 enterprises went into operation, with a total Chinese investment of $US 4.99 million. These enterprises scattered in Canada, the United Arab Emirates, Japan, Thailand, Singapore, Australia, etc.

PART TWO

Annex I (under chapter I)

1.1 Administrative Division of China (by the end of 1990)

Provinces, municipalities and autonomous regions	*Number of prefectures*	*Number of cities*			*Number of counties*	*Districts under city's administration*
		Total	*Equivalent to prefecture*	*Equivalent to county*		
Total 31	151	464	185	279	1903	651
Beijing Municipality	–	–	–	–	8	10

Tibet Autonomous Region	6	2	1	1	76	1
Shaanxi Province	6	12	4	8	85	14
Gansu Province	9	13	5	8	67	10
Qinghai Province	7	3	1	2	37	4
Ningxia Hui Autonomous Region	2	4	2	2	16	6
Xinjiang Uygur Autonomous Region	13	16	2	14	71	11
Taiwan Province	–	–	–	–	–	–

Notes:

1. The total number of cities is 467 if Beijing, Tianjin and Shanghai are included.
2. Number of prefectures excludes prefecture-level cities. Number of counties does not include county-level cities.

1.2 Population growth in 1970 and 1990

Year	*TFR*	*Birth rate (1%)*	*Natural growth rate (1%)*
1970	5.81	33.59	25.95
1990	2.31	21.06	4.39

1.3 Population growth in China and other countries (1990)

	TFR	*Birth rate (%)*	*Natural growth rate (%)*	*Death rate (%)*
China	2.3	21	14	7
World	3.5	27	18	10
Developed nations	2.0	15	5	9
Developing nations	4.0	31	21	10
Developing nations (excluding China)	4.6	35	24	11

1.4 Changes in age composition in China

	International accepted norms							
	Young type	*Adult type*	*Ageing type*	*1953 Census*	*1964 Census*	*1982 Census*	*1987 1% sample survey*	*1988 Birth-control sample survey*
Juvenile coefficient	40% plus	30–40%	below 30%	36.20%	40.70%	33.59%	28.68%	28.0%
Ageing pop. coefficient	below 5%	5–10%	10% plus	4.41%	3.56%	4.91%	5.46%	5.3%
Ageing people juvenile ratio	below 15%	15–30%	30% plus	12.2%	8.7%	14.6%	19.0%	19.0%
Age median	below age 20	Age 20-30	Age 30% plus		Age 20.9	Age 22.9	Age 24.2	Age 23.5

1.5 Some important data of the 1990 census

Item		*Unit*	*4th Census of 1990*	*3rd Census of 1982*	*Comparison between 1990 & 1982*
Total pop.[1]		person	1,133,682,501	1,008,175,288	+12.45%
Natural pop. changes[2]	Birth rate	%	20.98	20.91	+0.07%
	Death rate	%	6.28	6.36	–0.08%
	Natural growth rate	%	14.70	14.55	0.15%
Number of persons per family		person	3.96	4.41	–0.45 person
Sex ratio (female = 100)		%	106.6	106.3	+0.3%
Nationalities	Han	person	1,042,482,187	940,880,121	+10.8%
	Various nationalities	person	91,200,314	67,295,167	+35.52%
Education qualifications of every 1,000,000 people	College	person	1,422	615	+131.22%
	Senior school	person	8,039	6,779	+18.59%
	Junior school	person	23,344	17,892	+30.47%
	Primary school	person	37,057	35,237	+5.17%
Illiterates, semi–literates[3]		person	180,030,060	22,996,4474	–21.71%
	proportion to total pop.	%	15.88	22.81	–6.93%
City pop. town pop.[4]		person	296,512,111	206,588,582	
	Proportion to total pop.	%	26.23	20.60	

Notes:

(1) This is the total population on Chinese mainland, including members of armed forces on active service, and excluding the Chinese population figures for Taiwan, Hong Kong and Macau.

(2) The 1990 Census figures shown here are those for the 12 months prior to the start of the Census, and those of the 1982 Census are figures for 1981.

(3) These illiterates and semi–literates are people aged 15 and above.

(4) The city population in the 1990 Census is the population in urban districts in cities, where these districts have been set up, and that in streets in cities without urban districts. Town population is the population of neighbourhoods in towns under the jurisdiction of cities where urban districts have not been set up, and the population of neighbourhoods in towns under the jurisdiction of county administrations. The city population in the 1982 census in the population of centers which had been designated as cities (excluding the population of cities under the jurisdiction of county administrations). Town population is that of towns over which county administrations exercise jurisdiction.

1.6 Population and its composition (year–end figure), 1952-1990

10 thousand

Year	*Total*	*By sex*				*By residence*			
		Male		*Female*		*Urban*		*Rural*	
	Population	*Population*	*Proportion (%)*	*Population*	*Proportion (%)*	*Population*	*Proportion (%)*	*Population*	*Proportion (%)*

Notes:

1. Figures in this table refer to population of 30 provinces, autonomous regions and municipalities on the mainland, including servicemen.
2. 1949–1981 urban population refers to population living in areas under the administration of cities and towns. Rural population refers to population of counties but excluding those living in towns of a county. Fast increase in urban population in 1984 is due to increase of number of towns after adjustment of criterion of town in 1984.
3. Figures for years since 1982 were listed based on the 4th (1990) National Population Census.

1.7 Birth rate, death rate and natural growth rate of the population, 1952-1990

Unit:%

Year	*National*			*Urban*			*Rural*		
	Birth rate	*Death rate*	*Natural growth rate*	*Birth rate*	*Death rate*	*Natural growth rate*	*Birth rate*	*Death rate*	*Natural growth rate*
1952	37.00	17.00	20.00	–	–	–	–	–	–
1957	34.03	10.80	23.23	44.48	8.47	36.01	32.81	11.07	21.74
1962	37.01	10.02	26.99	35.46	8.28	27.18	37.27	10.32	26.95
1965	37.88	9.50	28.38	26.59	5.69	20.90	39.53	10.06	29.47
1970	33.43	7.60	25.83	–	–	–	–	–	–
1975	23.01	7.32	15.69	14.71	5.39	9.32	24.17	7.59	16.58
1976	19.91	7.25	12.66	13.12	6.60	6.52	20.85	7.35	13.50
1977	18.93	6.87	12.06	13.38	5.51	7.87	19.70	7.06	12.64
1978	18.25	6.25	12.00	13.56	5.12	8.44	18.91	6.42	12.49
1979	17.82	6.21	11.61	13.67	5.07	8.60	18.43	6.39	12.04
1980	18.21	6.34	11.87	14.17	5.48	8.69	18.82	6.47	12.35
1981	20.91	6.36	14.55	16.45	5.14	11.31	21.55	6.53	15.02
1982	22.28	6.60	15.68						
1983	20.19	6.90	13.29						
1984	19.90	6.82	13.08						
1985	21.04	6.78	14.26						
1986	22.43	6.86	15.57						
1987	23.33	6.72	16.61						
1988	22.37	6.64	15.73						
1989	21.58	6.54	15.04						
1990	21.06	6.67	14.39						

Notes:

1. Figures in this table exclude changes or floating people.
2. Figures for years since 1981 are calculated based on 1982 and 1990 national population censuses.

1.8 Natural resources in minority nationality autonomous areas, 1990

Item	*Unit*	*1990*	*Percentage to national total (%)*
Total surface area	10 thousand sq. m.	691.19	64.5
Grassland in pastoral and semi–pastoral areas	10 thousand hectares	30,000.00	94.0
Forest area	10 thousand hectares	4,787.00	38.4
Forest growing stock	100 million cu. m.	52.40	57.3
Hydropower resources	10 thousand kw.	35,000.00	51.8

1.9 Population in minority nationality autonomous areas, 1990

Province	*Population (10 thousand)*	*Minority population (10 thousand)*	*Percentage of minority population to the total population in minority areas (%)*
Total	**15060.57**	**6668.63**	**44.4**
Hebei	184.80	89.80	48.6
Inner Mongolia	2112.53	382.61	18.1
Liaoning	440.97	223.43	50.7
Jilin	315.42	112.00	35.5
Heilongjiang	23.00	3.80	16.5
Zhejiang	17.19	1.72	10.0
Hubei	419.99	185.44	44.2
Hunan	499.01	318.31	63.8
Guangdong	41.70	13.13	31.5
Guangxi	4149.92	1618.00	39.0
Hainan	212.91	91.59	43.0
Sichuan	803.54	415.44	51.7
Guizhou	1314.23	696.85	53.0
Yunnan	1866.79	984.57	52.7
Tibet	215.91	208.41	96.5
Gansu	262.60	140.22	53.4
Qinghai	271.09	150.76	55.6
Ningxia	454.81	151.55	33.3
Xinjiang	1454.16	901.00	62.0

1.10 Geographic distribution of minority nationalities

Nationality	*Main geographic distribution*
Mongolian	Inner Mongolia, Liaoning, Jilin, Hebei, Heilongjiang, Xinjiang
Hui	Ningxia, Gausu, Henan, Xinjiang, Qinghai, Yunnan, Hebei, Shandong, Anhui, Liaoning, Beijing, Inner Mongolia, Jilin, Heilongjiang, Shaanxi, Guizhou, Tianjin, Jiangsu, Sichuan
Tibetan	Tibet, Sichuan, Qinghai, Gansu, Yunnan
Uygur	Xinjiang
Miao	Guizhou, Hunan, Yunnan, Sichuan, Guangxi, Hubei
Yi	Yunnan, Sichuan, Guizhou
Zhuang	Guangxi, Yunnan, Guangdong
Buoyei	Guizhou, Yunnan
Korean	Jilin, Heilongjiang, Liaoning, Inner Mongolia
Manchu	Liaoning, Hebei, Heilongjiang, Jilin, Inner Mongolia, Beijing
Dong	Guizhou, Hunan, Guangxi, Hubei
Yao	Guangxi, Hunan, Yunnan, Guangdong, Guizhou
Bai	Yunnan, Hunan, Guizhou
Tujia	Hunan, Hubei, Sichuan, Guizhou
Hani	Yunnan
Kazak	Xinijang
Dai	Yunnan
Li	Hainan, Guizhou
Lisu	Yunnan, Sichuan
Va	Yunnan
She	Fujian, Zhejiang, Jiangxi, Guangdong
Gaoshan	Taiwan, Fujian
Lahu	Yunnan
Shui	Guizhou, Guangxi
Dongxiang	Gansu, Xinjiang
Naxi	Yunnan
Jingpo	Yunnan
Kirgiz	Xinjiang
Tu	Qinghai, Gansu
Daur	Inner Mongolia, Heilongjiang
Mulam	Guangxi
Qiang	Sichuan
Blang	Yuannan
Salar	Qinghai
Maonan	Guangxi
Gelo	Guizhou
Xibe	Liaoning Xinjiang
Achang	Yunnan
Pumi	Yunnan
Tajik	Xinjiang
Nu	Yunnan
Ozbek	Xinjiang
Russian	Xinjiang, Heilongjiang
Ewenki	Inner Mongolia
De'ang	Yunnan
Baoan	Gansu
Yugu	Gansu
Jing	Guangxi
Tatar	Xinjiang
Dulong	Yunnan
Oroqen	Heilongjiang, Inner Mongolia
Hezhe	Heilongjiang
Moinba	Tibet
Lhoba	Tibet
Jino	Yunnan

1.11 Main economic indicators of minority nationality autonomous areas

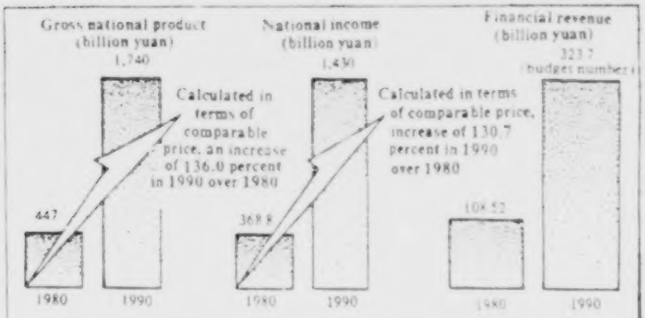
Item	*Unit*	*1952*	*1978*	*1985*	*1989*	*1990*
I. Gross output value of industry and agriculture[1]	¥ 100 million	57.90	367.70	801.00	1204.20	1290.2
Gross agricultural output value [1]	¥ 100 million	46.50	155.60	368.30	431.20	475.2
Gross industrial output value [1]	¥ 100 million	11.40	212.10	432.70	773.00	815.0
II. Agriculture						
Cultivated area	10 thousand hectares	1348.00	1640.00	1747.00	1752.00	1763
Irrigated area	10 thousand hectares	363.00	601.00	685.00	737.00	764
Grain production	10 thousand tons	1582.00	3124.00	4006.00	4662.00	5373
Cotton production	10 thousand tons	3.14	5.97	19.36	24.80	47.4
Large domestic animals (year-end)	10 thousand head	2439.00	3807.00	4749.00	5230.00	5286
Goats and sheep (year-end)	10 thousand head	4030.00	9580.00	9757.00	11284.00	1136.2
Hogs (year-end)	10 thousand head	1137.00	3260.00	4533.00	5435.00	5665
III. Industry						
Steel output	10 thousand tons	–	128.50	232.50	320.00	368.3
Pig iron output	10 thousand tons	0.90	168.20	258.10	362.90	417.0
Coal output	10 thousand tons	178.00	6081.00	8597.00	13927.00	10155
Crude oil output	10 thousand tons	5.20	577.70	804.90	1133.00	1265
Electricity generation	100 million kwh	0.80	174.00	398.00	675.60	738.5
Timber output	10 thousand cu.m	233.0	1212.00	1826.00	1763.00	1761
Cloth output [2]	100 million m	0.35	3.73	5.42	7.79	7.371
IV. Transport, posts and telecommunications						
Railways open to traffic	km	3787.00	9018.00	12495.00	12900	13064
Highways	10 thousand km	2.59	20.80	25.41	29.3	29.2
Postal routes	10 thousand km	13.13	94.75	90.40	92.9	88.0
V. Domestic trade						
Total value of retail sales	¥ 100 million	17.90	150.80	411.60	752.98	780.57
Total value of net domestic purchases	¥ 100 million	4.80	103.30	237.70	554.75	610.89
VI. Public health						
Health institutions	–	1176.00	23934.00	30432.00	31081.00	31973
Hospital and sanatorium beds	–	5711.00	253520.00	312137.00	388892.00	359382
Medical personnel	10 thousand	1.79	27.94	4237.00	47.83	48.37

Notes:

1. Figures of 1952 are at 1952 constant prices, those of 1978 are at 1970 constant prices and those after 1985 are at 1980 constant prices.
2. Cloth output after 1985 includes cloth blend with chemical fibers.

Annex 2 (under chapter II)

2.1 Economic and social development in the 1980s (State Statistical Bureau)



World Rank in Output of Major Products

	Cereals	Cotton	Pork, beef and mutton	Steel	Coal	Crude oil	Electricity
1980	2 (1981)	2 (1981)	3 (1981)	5	3	6	6
1989	1	1	1	4	1	6	4

1983	1,249.0	1,292.5	-43.5	111.1	112.1
1984	1,501.9	1,546.4	-44.5	120.2	119.6
1985	1,966.4	1,844.8	21.6	124.3	119.3
1986	2,260.3	2,330.8	–70.6	107.9	112.4
1987	2,368.9	2,448.5	–79.5	104.8	105.0
1988	2,128.0	2,076.6	–78.6	110.9	110.5
1989	2,947.7	3,040.2	-92.3	112.2	112.3
1990	3,244.8	3,395.2	–150.4	110.1	111.7
The period of rehabilitation	382.0	366.6	15.4	–	–
1953-1957	1,345.6	1,345.6	9.3	11.0	11.6
1958-1962	2,116.7	2,288.7	–172.5	0.2	0.1
1963-1965	1,215.1	1,204.9	10.2	14.7	15.2
1966-1970	2,529.1	2,518.7	10.5	7.0	6.8
1971-1975	3,919.7	3,919.6	0.1	4.2	4.8
1976-1980	4,960.7	5,247.3	–286.6	5.9	8.1
1981-1985	6,830.8	6,952.0	–121.2	11.5	8.8
1986-1990	1,344.9	13,921.3	–471.4	9.1	10.4

Notes:

1. Figures for different planning periods refer to the average annual increase rate.
2. Both revenue and expenditure of 1986 are more than the actual figures and not completely comparable with previous years because certain income reducing items are relisted for expenditure.
3. Figures of 1990 are the executing number of budget.

2.10 Gold and foreign exchange reserves, 1952-1990

Year	*Gold (10 thousand oz)*	*Foreign exchange ($US 100 million)*	*Stock of State foreign exchange*	*Foreign exchange balance of Bank of China*

1985	1,267	119.13	26.44	92.69
1986	1,267	105.14	20.72	84.42
1987	1,267	152.36	29.23	123.13
1988	1,267	175.48	33.72	141.76
1989	1,267	170.22	55.50	114.72
1990	1,267	285.94	110.93	175.01

2.11 Incomings and outgoings of State debts and borrowings, 1952-1990

¥ 100 million

Year	*Incomings*[1]	*Government domestic bonds and treasury bill*[2]	*Foreign borrowings*	*Outgoings*[1]	*Repaid capital with interest in government domestic bonds*	*Repaid capital with interest in foreign borrowings*	*Repaid capital with interest in PBC*[3] *borrowings*
1952	9.78	–	9.78	3.92	0.58	0.23	3.11
1957	6.99	6.84	0.15	8.26	2.18	6.08	–
1962	–	–	–	10.37	3.95	6.42	–
1965	–	–	–	6.36	5.66	0.70	–
1970	–	–	–	–	–	–	–
1975	–	–	–	–	–	–	–
1976	–	–	–	–	–	–	–
1977	–	–	–	–	–	–	–
1978	–	–	–	–	–	–	–
1979	35.31	–	35.31	–	–	–	–
1980	43.01	–	43.01	28.58	–	24.40	4.18
1981	73.08	–	73.08	62.86	–	57.89	5.00
1982	83.86	43.83	40.03	55.52	–	49.62	5.40
1983	79.41	41.58	37.83	42.47	–	36.56	5.41
1984	77.34	42.53	34.81	28.91	–	22.74	6.17
1985	89.85	60.61	29.24	39.56	–	32.59	6.47
1986	138.25	62.51	75.74	50.19	7.98	34.49	7.68
1987	169.55	63.07	106.48	79.83	23.18	51.96	4.69
1988	270.78	132.17	138.61	76.75	28.44	42.58	5.73
1989	82.97	138.91	144.06	72.36	19.30	45.83	7.23
1990	358.61	195.87	162.74	189.45	112.81	68.21	8.43

Notes:

1. For certain years the total of incomings (or outgoings) is larger than the sum of incomings (or outgoings) by items. This is due to the omission of certain items in the table.
2. 1981 incomings of treasury bill. ¥ 4,866 million in total which made up for the budget deficit in 1980 and 1981 was not included in the incomings of debts for the year.
3. PBC means the People's Bank of China.

2.12 Total investment in fixed assets, 1985-1990

Item	*1985*	*1986*	*1987*	*1988*	*1989*	*1990*
I. Total investment (¥ 100 million)	2,543.19	3,019.62	3,640.86	(4,496.54) 4,446.59	4,137.73	4,449.29
1. By ownership						
State-owned units	1,680.51	1,978.05	2,297.99	2,762.76	2,534.48	2,918.64
Capital construction	1,074.37	1,176.11	1,343.10	1,574.31	1,551.74	1,703.81
Technical updating and transformation	449.14	619.21	759.59	980.55	788.78	830.19
Other investment in fixed assets	157.00	183.18	196.30	207.90	194.97	199.17
Commercial housing						185.57
Collective-owned units	327.46	391.74	547.01	711.71	569.99	529.48
Urban	128.23	146.39	181.30	254.97	185.63	163.38
Rural	199.23	245.35	365.71	456.74	384.36	366.10
Individual investment	535.22	649.38	795.86	1,022.08	1,032.26	1,001.17
Urban	56.79	74.56	100.51	156.85	140.23	124.70
Rural	478.43	574.82	695.35	865.23	892.03	876.47
2. By source of finance						
State budget	407.80	440.63	475.54	402.68	344.87	287.65
Domestic loans	510.27	638.31	835.94	914.59	689.81	870.88
Foreign investment	91.48	132.16	175.37	254.51	282.35	278.26
Self-raised funds	1,533.64	1,488.51	1,745.18	2,416.94	2,413.06	2,329.49
Other	–	320.00	408.83	457.87	407.62	583.01
3. By nature of work						
Construction and installation projects	1,655.46	1,992.72	2,377.56	2,908.56	2,812.57	2,962.84
Purchase of equipment and instruments	718.08	823.28	997.00	1,221.02	1,048.71	1,148.39
Other	169.65	203.62	266.30	317.00	276.45	338.08
4. By purpose of construction						
Productive construction	1,544.10	1,839.33	2,291.81	2,828.70	2,571.97	2,768.28
Non-productive construction	999.09	1,180.28	1,349.16	1,617.89	1,565.76	1,681.01
Of which: Residential buildings	641.63	729.35	872.06	1,067.02	1,063.84	1,164.48
II. Floor space of buildings (10 thousand sq.m)						
Floor space under construction	148,859	188,184	174,597	168,951	131,788	137,171
Floor space completed	122,084	151,184	141,963	135,943	105,749	107,793
Of which: Residential buildings	90,972	117,667	107,697	104,801	83,197	86,289

Notes:

1. Other investments include those in oilfield maintenance and development, in expanding projects of mining, their investment, and in other infrastructural construction.
2. Figure of 1988 in bracket includes the investment in special economic zones in Guangdong Province.
3. Figure of 1989 does not include those investments valued between ¥ 20,000- ¥ 50,000 which are not under the State plan.

2.13 Change of investment in capital construction compared with the previous year, 1989 and 1990

Item	*1989*	*1990*	*Changes of 1990 over 1989*	
			Value	± %
I. Total investment (¥ 100 million)	1,551.74	1,073.81	152.07	9.8
(1) By source of finance				
State budget	323.33	363.59	40.26	12.5
Domestic loans	293.00	378.62	85.62	29.2
Foreign investment	221.45	224.05	2.60	1.2
Self-raised funds	495.03	529.92	34.89	7.0
Other	218.91	207.62	–11.29	–5.2
(2) By administrative relationship				
Ministerial projects	747.87	836.39	88.52	11.8
Ministerial supplied projects	89.84	82.76	–7.08	–7.9
Local projects	714.03	784.66	70.63	9.9
(3) By nature of work				
Construction and installation projects	998.73	1,045.37	46.64	4.7
Purchase of equipment and instruments	380.94	453.76	72.82	19.1
Other	172.07	204.69	32.62	19.0
(4) By type of construction				
New construction	708.49	822.96	114.47	16.2
Expansion	569.54	610.99	41.45	7.3
Reconstruction	105.42	116.13	10.71	10.2
(5) By purpose of construction				
Productive construction	1,064.07	1,235.58	171.51	16.1
Non-productive construction	487.67	468.23	–19.44	–4.0
Of which: Residential buildings	189.39	170.32	–19.07	–10.1
(6) By size				
Large and medium projects	729.70	896.31	166.61	22.8
Small projects	686.59	702.56	15.97	2.3
(7) By sector of national economy				
Agriculture	50.65	67.22	16.57	32.7
Industry	822.48	952.60	130.12	15.8
Of which: Energy industry	446.38	558.27	111.89	25.1
Heavy industry	699.39	830.81	131.42	18.8
Light industry	123.09	121.79	–1.30	–1.1
Transport, posts and telecommunications	166.51	207.16	40.65	24.4
Education and scientific research	102.42	104.34	1.92	1.9
II. Newly-increased fixed assets (¥ 100 million)	1,179.03	1,362.61	183.58	15.6
III. Construction projects				
Projects under construction	66,382	67,041	1,459	2.2
Of which: Large and medium size	969	1,063	94	9.7
Projects completed	35,370	36,502	1,132	3.2
Of which: Large and medium size	95	152	57	60.0
IV. Floor space of construction (10 thousand sq.m)				
Floor space under construction	24,744.18	23,236.54	–1,507.64	–6.1
Of which: Residential buildings	9,749.94	1,259.90	–490.04	–5.0
Floor space completed	11,611.55	11,245.93	–365.62	–3.1
Of which: Residential buildings	5,064.20	4,824.78	–239.42	–4.7

Notes:

1. Figures in this table for "by source of finance" are calculated based on proportions of group figures in the "by source of finance" of capital construction finance allocations.
2. Floor space of construction in 1989 excludes purchase floor space of commercial housing.

2.14 Newly increased production capacity through capital construction, 1990

Name of production capacity	*Unit*	*Quantity*	*Name of production capacity*	*Unit*	*Quantity*
Coal mining	10 thousand tons	2,336.10	Salt	10 thousand tons	26.03
Installing capacity of			Machine-made paper		
Power generating equipment	10 thousand kw	915.55	and paper-board	10 thousand tons	5.43
Petroleum extraction	10 thousand tons	374.17	Cotton spindles	10 thousand	38.50
Natural gas extraction	100 million cu.m	1.19	Wool spindles	10 thousand	0.18
Iron-ore mining	10 thousand tons	325.00	Chemical fiber	10 thousand tons	3.89
Iron smelting	10 thousand tons	21.00	New railway lines	km	381.33
Steel smelting	10 thousand tons	10.50	Length of electrified		
Cement	10 thousand tons	283.10	railway	km	566.80
Timber felling	100 million cu.m	34.55	Seaports handling		
Synthetic ammonia	10 thousand tons	4.75	capacity	10 thousand tons	3,017.44
Chemical fertilizer	10 thousand tons	51.59	New highways	km	3,043.73
Sulphuric acid	10 thousand tons	6.02	Long-distance		
Caustic soda	10 thousand tons	5.00	cables	km	776.23
Plastics	10 thousand tons	3.72	New microware		
Machine-made suger	10 thousand tons	11.08	circuits	km	4,529.90

2.15 Bank credit receipts (year-end figure), 1985-1990

1990	2,814.66	1,965.53	11.40	8.51	155.08	86.62	36.59

Note: Figures for years since 1980 include income taxes of joint venture enterprises and foreign enterprises, individual income tax and value-added tax, which are not separately listed. Industrial and commercial taxes for years since 1985 include salt and construction taxes.

2.19 Economic and technical indicators of insurance business, 1989 and 1990

Item	*Unit*	*1989*	*1990*
I. Domestic business			
1. Insurance volume	¥ 100 million	16,734	19,366
(1) Enterprise equipment	¥ 100 million	12,791	14,705
(2) Transportation property	¥ 100 million	2,011	2,337
(3) Family property	¥ 100 million	1,923	2,324
2. Premium	¥ 10 thousand	1,229,086	1,557,614
(1) Insurance on enterprise property	¥ 10 thousand	238,243	278,483
(2) Insurance on transportation equipment and responsibility	¥ 10 thousand	238,470	409,479
(3) Insurance on family property	¥ 10 thousand	60,654	92,981
(4) Insurance on old-age pension	¥ 10 thousand	150,591	232,551
(5) Accident insurance	¥ 10 thousand	82,643	95,557
(6) Simple personal insurance	¥ 10 thousand	166,645	162,689
(7) Agricultural insurance	¥ 10 thousand	12,966	19,248
(8) Freight transport insurance	¥ 10 thousand	86,148	137,038
(9) Other	¥ 10 thousand	102,726	129,588
3. Number of claims	case	4,556,794	3,028,866
(1) Settled	case	4,384,609	2,777,726
(2) Unsettled	case	172,185	251,140
4. Settled reparations	¥ 10 thousand	485,119	683,047
(1) Insurance on enterprise property	¥ 10 thousand	93,633	97,858
(2) Insurance on family property	¥ 10 thousand	23,919	46,822
(3) Insurance on transportation equipment and responsibility	¥ 10 thousand	208,980	230,364
(4) Insurance on old-age pension	¥ 10 thousand	16,884	27,975
(5) Accident insurance	¥ 10 thousand	31,064	37,656
(6) Simple personal insurance	¥10 thousand	6,903	57,699
(7) Agricultural insurance	¥ 10 thousand	52,860	131,161
(8) Freight transport insurance	¥ 10 thousand	10,748	16,722
(9) Other	¥ 10 thousand	40,128	36,790
II. Overseas business			
1. Value of insurable property	$ 100 million	–	–
(1) Imported freight transport	$ 100 million	–	–
(2) Ocean-going export freight transport	$ 100 million	–	–
(3) Transport of exported freight to Hong Kong and Macau	$ 100 million	–	
(4) Ships	$ 100 million	–	–
2. Insurance volume	$ 100 million	432.25	599
(1) Imported freight transport	$ 100 million	137.73	198
(2) Ocean-going export freight transport	$ 100 million	116.54	144
(3) Transport of freight export to Hong Kong and Macau	$ 100 million	84.13	99
(4) Ship insurance	$ 100 million	93.85	158
3. Premium	$ 10 thousand	42,090	42,318
(1) Freight insurance on import transport	$ 10 thousand	9,677	6,272
(2) Freight insurance on ocean-going export transport	$ 10 thousand	9,340	10,394
(3) Freight insurance on export transport to Hong Kong and Macau	$ 10 thousand	3,632	3,861
(4) Ship insurance	$ 10 thousand	3,215	3,518
(5) Marine petroleum insurance	$ 10 thousand	1,197	952
(6) Non-water insurance	$ 10 thousand	1,355	1,555
(7) Other	$ 10 thousand	13,674	15,766

2.20 Main indicators of the national economy

Item	*Unit*	*1952*	*1978*	*1980*	*1985*	*1989*	*1990*
I. Population							
Year-end population	10 thousand	57,482.00	96,259.00	98,705.00	105,851	112,704	114,333
II. Labour force (year-end)							
Labour resources	10 thousand persons	26,710	-	-	62,114	68,364	69,732
Social labourers	10 thousand persons	20,729.00	40,152.00	42,361.00	49,873.00	55,329.00	56,740
Staff and workers	10 thousand persons	1,603.00	9,499.00	104,444.00	12,358.00	13,742.00	14,059
III. Gross national product	¥ 100 million	-	3,588.00	4,470.00	8,558.00	15,916.00	17,686
IV. National income	¥ 100 million	589.00	3,010.00	3,688.00	7,020.00	13,176.00	14,429
V. Total product of society	¥ 100 million	1,015.00	6,846.00	8,534.00	16,582.00	34,519.00	37,996
Gross output value of agriculture and industry	¥ 100 million	810.00	5,634.00	7,077.00	13,335.00	28,552.00	31,586
VI. Investment in fixed assets							
1. Total investment in fixed assets	¥ 100 million	-	-	910.85	2,543.19	4,137.73	4,449.29
Productive construction	¥ 100 million	-	-	-	1,544.10	2,571.97	2,768.28
Non-productive construction	¥ 100 million	-	-	-	999.09	1,565.76	1,618.01
Residential buildings	¥ 100 million	-	-	-	641.63	1,063.84	1,164.47
2. Investment in fixed assets of State-owned units	¥ 100 million	43.56	668.72	745.90	1,680.51	2,535.48	2,918.64
Investment in capital construction	¥ 100 million	43.56	500.99	558.89	1,074.37	1,551.74	1,703.81
Investment in renovation and other fixed assets	¥ 100 million	-	167.73	187.01	606.14	987.75	1,029.26
3. Collective-owned units	¥ 100 million	-	-	45.95	327.46	569.99	529.48
Urban	¥ 100 million	-	-	22.95	128.23	185.63	163.38
Rural	¥ 100 million		-	23.00	199.23	384.36	366.10
VII. State finance							
1. State finance revenues	¥ 100 million	183.7	1,121.1	1,085.2	1,866.4	2,947.9	3,244.8
Central	¥ 100 million	-	164.6	209.7	707.9	1,105.5	-
Local	¥ 100 million	-	956.5	875.5	1,158.5	1,842.4	-
2. State finance expenditures	¥ 100 million	176.0	1,111.00	1,212.7	1,844.8	3,040.2	3,395.2
Central	¥ 100 million	127.4	521.0	650.7	836.5	1,105.2	-
Local	¥ 100 million	48.6	590.0	562.0	1,008.2	1,935.0	-
3. Non-budgetary revenues	¥ 100 million	13.6	347.1	557.4	1,530.0	2,658.8	-
VIII. Price indexes (1989 = 100)							
General index of purchasing price of farm and sideline products	%	101.70	103.90	107.10	108.60	115.00	97.4
General index of retail prices	%	99.60	100.70	106.00	108.80	117.80	102.1
General index of cost-of-living prices of staff and workers	%	102.70	100.70	107.50	111.90	116.30	101.3
IX. Wages							
Total wage bill of staff and worlers	¥ 100 million	68.00	569.00	772.00	1,383.00	2,619.00	2,951
Average annual wage of staff and workers	¥	445.00	615.00	762.00	1,148.00	1,935.00	2,140
X. Standard of residents consumption	¥	76	175	227	403	691	714
Farmers	¥	62	132	173	324	511	522
Non-agricultural residents	¥	149	383	468	747	1,387	1,442
XI. Agricultural production							
1. Gross agricultural output value	¥ 100 million	461.00	1,397.00	1,923.00	3,619.00	6,535.00	7,662
2. Output of major farm products							
Grain	10 thousand tons	16,392.00	30,477.00	32,056.00	37,911.00	10,755.00	44,624
Cotton	10 thousand tons	130.40	216.70	270.70	414.70	378.80	450.80
Oil-bearing crops	10 thousand tons	419.30	521.80	769.10	1,578.90	1,295.20	1,613.2
Sugarcane	10 thousand tons	711.60	2,111.60	2,280.70	5,154.90	4,879.50	5,762.0
Beetroots	10 thousand tons	47.90	270.20	630.50	891.90	924.30	1,452.5
Tea	10 thousand tons	8.20	26.80	30.40	43.20	53.50	54.6
Fruits	10 thousand tons	244.30	657.00	679.30	1,163.90	1,831.90	1,874.4
Pork, beef and mutton	10 thousand tons	338.50	856.30	1,205.40	1,760.70	2,326.20	3,513.5
Aquatic production	10 thousand tons	167.00	466.00	450.00	705.00	1,152.00	1,237

Note: Figures in this table are at current prices.

2.20 Main indicators of the national economy *(continued)*

Item	*Unit*	*1952*	*1978*	*1980*	*1985*	*1989*	*1990*
XII. Industrial production							
1. Gross industrial output value	¥ 100 million	349.00	4,237.00	5,154.00	9,716.00	22,017.00	23,924
2. Output of major industrail products							
Cloth	10 million meters	38.30	110.30	134.70	146.70	189.20	188.8
Machine-made paper and paperboards	10 thousand tons	37.00	439.0	535.00	911.00	1,333.00	1,327
Sugar	10 thousand tons	45.00	227.00	257.00	451.00	501.00	582
Bicycles	10 thousand	8.00	854.00	1,302.40	3,277.70	3,676.80	3,141.6
Sewing machines	10 thousand	6.60	486.50	767.80	991.20	956.30	723.8
Wrist watches	10 thousand		1,351.10	2,215.50	5,431.10	7,275.60	8,071.3
Household refrigerators	10 thousand		2.80	4.90	144.81	670.79	463.06
TV sets	10 thousand		51.73	249.20	1,667.66	2,766.54	2,684.7
Colour TV sets	10 thousand		0.38	3.20	435.28	940.02	1,023.0
Household washing machines	10 thousand		0.04	24.50	887.20	825.40	662.7
Cassette recorders	10 thousand		4.70	74.30	1,393.10	2,418.10	3,023.5
Cameras	10 thousand		17.89	37.28	178.97	245.18	213.22
Coal	100 million tons	0.66	6.18	6.20	8.72	10.54	10.80
Crude oil	10 thousand tons	44.00	10,405.00	10,595.00	12,490.00	13,764.00	13,831
Electricity	100 million kwh	73.00	2,566.00	3,006.00	4,107.00	5,848.00	6,212
Steel	10 thousand tons	135.00	3,178.00	3,712.00	4,679.00	6,159.00	6,635
Rolled steel (final products)	10 thousand tons	106.00	2,208.00	2,716.00	3,693.00	4,859.00	5,153
Cement	10 thousand tons	286.00	6,542.00	7,986.00	14,595.00	21,029.00	20,971
3. Overall labour productivity of State-owned independent accounting industrial enterprises	¥ / person	4,200	11,130.00	12,081.00	15,198.00	18,320.00	18,639
4. Principal financial items of State-owned independent accounting industrial enterprises							
Original value of fixed assets (year-end)	¥ 100 million	148.80	3,193.40	3,730.10	5,956.20	10,150.80	11,610.3
Total funds	¥ 100 million	146.80	3,273.00	3,663.70	5,604.10	10,318.00	12,088.6
Net value of fixed assets (year-end)	¥ 100 million	100.80	2,225.70	2,528.00	3,980.80	7,033.20	8,088.3
Quota circulating funds	¥ 100 million	46.00	1,047.30	1,135.70	1,623.30	3,284.80	4,000.3
Profits and taxes	¥ 100 million	37.40	790.70	907.10	1,334.10	1,774.10	1,503.1
XIII. Transport, posts and telecommunications							
1. Volume of freight traffic	100 million ton / km	762.00	9,829.00	12,026.00	18,126.00	25,591.00	26,207
Railway	100 million ton / km	602.00	5,345.00	5,717.00	8,126.00	10,394.00	10,622
Highway	100 million ton / km	14.00	274.00	764.00	1,693.00	3,374.00	3,358
Waterway	100 million ton / km	146.00	3,779.00	5,053.00	7,700.00	11,176.00	11,592
Pipeline	100 million ton / km		430.00	491.00	603.00	629.00	627
Civil aviation	100 million ton / km		1.00	1.40	4.20	6.90	8.2
2. Volume of passenger traffic	100 million person / km	248.00	1,743.00	2,281.00	4,437.00	6,073.00	5,628
Railway	100 million person / km	201.00	1,093.00	1,383.00	2,416.00	3,037.00	2,613
Highway	100 million person / km	22.70	521.00	730.00	1,725.00	2,662.00	2,620
Waterway	100 million person / km	24.50	101.00	129.00	179.00	188.00	165
Civil aviation	100 million person / km	0.20	28.00	40.00	117.00	187.00	230
3. Cargo handled at principal seaports	10 thousand tons	1,440.00	19,834.00	21,731.00	31,154.00	44,214.00	43,160
4. Service revenue of posts and telecommunications	¥ 100 Million	1.64	11.65	13.34	29.60	64.81	81.56
Letters delivered	100 Million	8.09	28.35	33.13	46.78	57.28	54.87
Newspapers and magazines circulated	10 thousand copies	1,363.00	11,250.00	16,431.00	30,172.00	17,704.00	1,984.1

Notes:

1. Figures except the following ones in this table are at current prices.
2. Figures for overall labour productivity of State-owned independent accounting industrial enterprises are at 1980 constant prices.
3. Figures for volume of freight traffic in highway transport include freight figures of social vehicles for years since 1979 and that of private ones since 1984.
4. Figures for cargo handled at principal seaports in 1989 and 1990 should respectively be 490.25 million tons and 482.19 million tons if they include Longkou, Weihai and some other medium-sized seaports.
5. Figures of service revenue from posts and telecommunications for years since 1981 are at 1980 constant prices and at 1970 constant ones before 1981.

2.20 Main indicators of the national economy *(continued)*

	Item	Unit	1952	1978	1980	1985	1989	1990
XIV	Production and consumption of energy (standard coal)							
	Total production	10 thousand tons	4,871	62,770	63,735	85,546	101,639	104,049
	Total consumption	10 thousand tons	–	57,144	60,275	76,682	96,934	98,000
XV	Domestic trade							
	1. Total value of commodity purchased	¥ 100 million	175.0	1,739.7	2,263.0	3,532.5	7,606.0	8,221.2
	Industrial products	¥ 100 million	84.5	1,263.4	1,576.6	2,462.3	5,468.7	5,871.2
	Agricultural and sideline products	¥ 100 million	90.1	459.9	677.0	1,033.2	2,053.7	2,258.6
	2. Volume of purchases of agro-sideline products							
	Grain	10 thousand tons	3,903.0	5,072.5	6,129.0	10,762.8	12,138.1	13,995.2
	Cotton	10 thousand tons	108.7	209.6	261.0	431.9	330.6	409.1
	Edible vegetable oil	10 thousand tons	98.0	110.5	191.0	409.8	360.7	470.3
	Sugar	10 thousand tons	369.7	1,577.9	1,584.1	3,687.5	3,395.9	4,619.0
	Beetroots	10 thousand tons	39.0	255.3	554.1	806.4	776.3	1,402.8
	Tea	10 thousand tons	7.7	24.3	26.2	39.5	53.4	49.2
	Pigs	10 thousand tons	3,742.7	10,936.5	14,250.0	16,020.8	17,583.0	18,504.5
	Beef cattle	10 thousand tons	125.8	140.8	221.6	463.8	758.3	909.5
	Mutton sheep	10 thousand tons	522.7	998.3	1,680.2	2,830.3	3,696.4	4,033.3
	Eggs	10 thousand tons	19.4	56.0	99.1	192.2	267.5	282.4
	Aquatic products	10 thousand tons	91.8	269.2	239.3	334.2	467.1	575.3
	3. Total retails of commodities	¥ 100 million	276.8	1,558.6	2,140.0	4,305.0	8,101.4	8,300.1
	4. Volume of retail sales of major commodities							
	Grain	10 thousand tons	2,961.0	4,750.0	5,497.0	9,011.6	9,347.4	9,289.2
	Edible vegetable oil	10 thousand tons	76.50	87.50	126.0	394.10	411.60	441.6
	Pork	10 thousand tons	170.40	467.50	704.50	916.40	1,131.30	1,246.9
	Sugar	10 thousand tons	47.10	315.60	363.50	572.50	530.80	576.6
	Cloth	100 million meters	30.80	76.90	98.40	121.20	127.80	119.4
	Sewing machines	10 thousand	10.00	439.80	665.00	1,103.00	710.00	552.6
	Bicycles	10 thousand	33.50	809.60	1,186.00	3,111.20	3,348.70	2,760.3
	TV sets	10 thousand		55.10	364.00	2,156.90	2,173.80	1,923.0
	Washing machines	10 thousand		0.20	23.50	1,098.10	1,233.40	924.9
	Refrigerators	10 thousand		2.00	5.50	220.00	604.40	436.0
	5. Sales volume of agro-production materials							
	Chemical fertilizer	10 thousand tons	29.5	4,087.5	5,531.1	6,231.8	9,378.7	10,023.6
	Farm chemical	10 thousand tons	1.5	146.4	152.7	65.3	63.7	61.5
	Farm machinery	10 thousand kw		1,037.1	639.8	723.4	1,014.6	898.1
XVI	Foreign trade							
	Total value of exports and imports	$ 100 million	19.40	206.40	378.20	696.00	1,116.30	1,154.1
	Exports	$ 100 million	8.20	97.50	182.70	273.50	524.90	620.9
	Imports	$ 100 million	11.20	108.90	200.2	422.50	591.40	533.5
XVII	Education and culture							
	Students enrolled in institutions of higher learning	10 thousand	19.10	85.60	114.40	170.30	208.20	206.3
	Students enrolled in secondary specialized schools	10 thousand	63.60	88.90	124.30	157.10	217.70	224.4
	Students enrolled in regular secondary schools	10 thousand	249.00	6,548.30	5,508.10	4,706.00	4,554.00	4,586.0
	Students enrolled in primary schools	10 thousand	5,110.00	14,624.00	14,627.00	13,370.00	12,373.10	12,241.40
	Newspapers issued	100 million copies	16.10	127.80	140.40	199.80	156.20	158.70
	Magazines issued	100 million copies	2.00	7.60	11.20	25.60	18.20	19.10
	Books published	100 million copies	7.90	37.70	45.90	66.70	58.60	55.80
XVIII	Public health							
	Hospital beds	10 thousand	16.00	185.60	198.20	222.90	256.80	262.40
	Professional medical personnel	10 thousand	69.00	246.40	279.80	341.10	380.90	389.80
	Of whom: Doctors	10 thousand	42.50	103.30	115.30	141.30	171.80	173.30

Note: Figures for sales volume of agroproduction materials in this table refer to the sales volume of State-owned commercial departments and the supply and marketing cooperatives.

2.21 National income, 1952-1990

¥ 100 million

Year	*National income*	*Agriculture*	*Industry*	*Construction*	*Transport*	*Commerce*	*Per capita national income (¥)*
1952	589	340	115	21	25	88	104

Timber	cubic meter	80.0	100.0	109.0	149.0	313.3	661.9	632.3

Note:

1. Mixed average prices, including the state-fixed retail prices and negotiated prices, are obtained by dividing the value of retail sales of each commodity by the quantity sold. Therefore, any fluctuation of prices or changes in consumption structure will have influences on a particular mixed average retail price.
2. One case contains 50 thousand cigarettes.
3. One case is equal to 1,000 boxes.

2.27 Mixed average purchasing prices of principal farm products

Paved road per 10,000 population	km	3	3.40	3.4	3.3	3.3	6.7	4.8
Area of paved road	10 thousand sq.m	14,422	21,000	22,539	25,255	35,872	88,873	89,160
Area of paved road per 10,000 population	10 thousand sq.m	2.4	3	2.9	2.8	3.1	6.2	6
Length of sewer pipes	km	10,107	12,855	19,556	21,860	31,556	54,510	57,787
Sewer pipes per 10,000 population	km	1.4	2	2.5	2.4	2.7	3.8	3.9
Gas and liquefied petroleum gas for public use								
Gas work gas supply	10 thousand cu.m	20,475	69,628	172,541	195,491	249,754	841,297	1,747,605
Of which: For household use	10 thousand cu.m	12,696	32,000	66,59	83,281	107,060	204,709	274,127
Length of gas pipes	km	2,137	2,412	4,717	5,619	10,567	14,448	16,312
Volume sold of natural gas	10 thousand cu.m	—	—	69,078	58,937	162,099	591,173	642,698
Non-productive consumption of liquefied gas	10 thousand tons	—	0.01	17.9	27	54.7	125.9	142.8
Population with access to gas	%	1.5	3	13.9	16.8	22.4	38.6	42.2
Vegetation in cities								
Green-covered area	hectare	—	26,080	81,735	85,543	159,291	381,129	474,613
Green-covered area per 10,000 population	hectare	—	4.30	10.6	9.6	13.7	26.4	32.2
Parks and zoos: Number	—	—	585	616	679	1,026	1,827	1,970
Area	hectare	—	13,903	15,229	16,192	21,896	38,314	40,081
Sanitation and hygiene								
Disposal of garbage	10 thousand tons	—	—	—	3,132	4,477	6,291	6,767
Disposal of night soil	10 thousand tons	—	—	—	1,643	1,731	2,603	2,385
Public toilets per 10,000 population	—	—	—	6.6	5.8	6.6	6.7	6.6

Note:

1. Figures for years since 1986 cover public utilities of the whole society, while figures for years before 1985 only cover public utilities under management of urban construction departments.
2. Public utilities possessed by per capita are calculated on basis of non-agricultural population in urban areas.

2.29 Commodity composition of exports (customs statistics), 1989 and 1990

$US 100 million

Item	*Value*		*Composition (%)*	
	1989	*1990*	*1989*	*1990*
TOTAL EXPORTS	525.38	620.91	100.00	100.00
I. Primary goods	150.78	158.86	28.70	25.59
Food and live animals chiefly for food	61.45	66.09	11.70	10.64
Of which: Live animals chiefly food	3.95	4.30	0.75	0.69
Meat and meat products	6.57	7.91	1.25	1.27
Fish, shell-fish, molluscs and their products	10.39	13.70	1.98	2.21
Grain and grain products	7.19	6.14	1.37	0.99
Vegetables and fruits	16.23	17.59	3.09	2.83
Coffee, tea, cocoa, condiments and their products	5.68	5.34	1.08	0.86
Beveragas and tobacco	3.14	3.42	0.60	0.55
Of which: Beverages	1.73	1.71	0.33	0.28
Non-food raw materials	42.11	35.37	8.02	5.70
Of which: Raw leather and untanned leather and furs	1.22	1.53	0.23	0.25
Oil seeds and oil-containing fruits	6.45	6.19	1.23	1.00
Textile fibres (excluding wool-polyester fibre) and their waste materials	15.46	10.96	2.95	1.77
Animal and vegetable raw materials	8.44	8.09	1.61	1.30
Mineral fuels, lubricants and other related materials	42.70	52.37	8.22	8.44
Of which: Coal, coke and briquettes	6.80	7.55	1.30	1.22
Petroleum, petroleum products and other related materials	35.82	44.72	6.82	7.20
Animal and vegetable oils, fats and waxes	0.86	1.61	0.16	0.26
Of which: Vegetable oil	0.83	1.55	0.16	0.25

Note

Abbreviations and symbols

CM	cubic metre
CR	carton
KWH	kilowatt-hour
M	metre
N	number of item
PR	pair
SM	square metre

ST	set
T	ton
10000	in ten thousands (number)
1000000	in million (number)
0	less than half the unit shown nil

3.2 Composition of exports and imports, fourth quarter 1992

Unit:US$ 10,000

Commodity	4th quarter		year TO date	
	Exports	Imports	Exports	Imports
1. Primary products	525,858	444,828	1,704,973	1,325,457
Food and live animals chiefly for food	273,874	63,955	835,377	314,627
Beverages and tobacco	23,670	8,831	72,084	23,868
Crude materials, inedible, except fuels	90,433	182,649	314,404	577,438
Mineral fuels, lubricants and related materials	132,928	171,905	469,222	357,029
Animal and vegetable oils, fats and waxes	4,952	17,488	13,885	52,496
2. Manufactures	2,227,749	2,364,506	6,794,852	6,735,556
Chemicals and related products, nes	137,827	301,317	434,741	1,115,781
Manufactured goods classified chiefly by material	491,896	650,669	1,613,876	1,929,774
Machinery and transport equipment	456,531	1,228,080	1,321,914	3,131,287
Miscellaneous manufactured articles	1,141,496	184,440	3,424,321	558,714

3.3 Imports and exports by country (region) of origin/consumption, fourth quarter 1992

Unit: US$ 10,000

Country (Region)	4th quarter		year TO date		Percentage change

3.9 Interim provisions for export commodities*

These interim provisions are formulated in the light of the international convention to meet the needs of the development of socialist market economy, to strengthen macro management of export, to promote the transformation of enterprise mechanism and to speed up the development of foreign economy:

1. Scope of export commodities under State quota licensing

Export commodities under State quota licensing mainly consist of large amount of resources in relation to the national economy and the peoples' livelihood and large amount of traditional goods holding an important position in national export; important commodities occupy a leading post on the world market or a specific market, and commodities under quota from the other countries or required by foreign countries to actively restrict the amount in export; large amount of exports which are prone to causing operational disorder and export commodities of famous brand, top quality and special products or export commodities for special demands. There are 138 kinds of commodities under the quota licensing. Following the deepening of reform, export commodities under quota licensing will be gradually reduced.

(1) On the export of large amount of resources in relation to the national economy and people's livelihood and large amount of traditional goods holding an important position in export, 38 kinds of commodities are put under planned quota licensing. After defining the total amount of export quota each year, the Ministry of Foreign Trade and Economic Cooperation will make it known to and to be executed by various provinces, autonomous regions, municipalities directly under the central government and separately listed municipalities (hereafter referred to as various localities) and national corporations (industry-trade) of foreign trade (hereafter referred to as various foreign trade corporations under various departments) under various central departments.

(2) On the export of important export commodities holding a leading position on the world market or a specific market, and commodities required by foreign countries to put under planned quota licensing of our own accord, 54 kinds of commodities fall under this category. Of which, 31 kinds are for ocean-going areas and 23 kinds are for Hongkong and Macau areas. The amount of exports will be decided by the Ministry of Foreign Trade and Economic Cooperation according to the market situation at home and abroad and the opinions of related Import and Export Chambers and to be distributed to and executed in principle by various localities and various foreign trade corporations under various departments.

(3) A general licensing is granted on export commodities involving large amount of money and prone to causing operational disorder, exports of famous brand, top quality and special products and few goods that need licensing. There are 22 kinds of commodities fell under this category, and the kinds of goods will be regulated each year according to real situation. The amount of annual export is not to be limited in principle and the stress is laid on management order.

(4) A passive quota licensing will still be given to 24 kinds of export commodities which are under quotas from foreign countries. The annual export amount will be carried out according to bilateral negotiations. And the way of distribution is to be formulated separately.

---

* Issued by the Ministry of Foreign Trade and Economic Cooperation on 29 December 1992 and went into effect on 1 January 1993.

(5) Commodities produced by foreign-funded enterprises and fell under the quota licensing will get export quotas according to the ratified contracts at the time of the establishment.

2. Implementation of export licensing

(1) Planned quota export licensing is practised on export commodities under active quota and general licensing. And 114 kinds of goods are put under export licensing.

(2) Licences of export commodities under planned quota and active quota are to be issued according to plans and amount of quota. The issuance of licences for export commodities under general licensing is not to be limited in number in principle. If limits are needed due to changing situations on the world and home markets, the Ministry of Foreign Trade and Economic Cooperation will notify the license issuing agency ahead of time.

(3) The Ministry of Foreign Trade and Economic Cooperation formulates methods on the implementation of licences, exercises a macro management and controls the total number of licences to be issued, while leaving the issuing work to the various local foreign trade departments and representative offices.

(4) Trial bidding is to be exercised on the issuance of licenses to part of the commodities under licensing, and the bid is to be held by the Import and Export Chamber. Export licenses are issued by license issuing agents according to the amount and price of the successful bidding within the defined quota. The management department of foreign trade and economic cooperation supervises the execution of contracts. The scope of commodities under quota licensing for trial bidding will be gradually expanded.

3. Administration of export commodities

(1) Sixteen kinds of export commodities of special importance under planned quota are put under unified State management. Concrete methods are to be worked out by the Ministry of Foreign Trade and Economic Cooperation.

(2) Excluding the sixteen kinds of export commodities under unifies State management, other export commodities under quota licensing will be distributed by the economic and trade managing departments of various provinces, autonomous regions, municipalities under central government and cities under separate plans to foreign trade enterprises successful in export and operation and other enterprises with rights to handle the said kind of export commodities. (Distribution to foreign trade corporations of vaious departments will be decided by the Ministry of Foreign Trade and Economic Cooperation according to their achievements and ability in handling export). The rest of export commodities can be handled by foreign trade enterprises with State approval to handle foreign trade.

(3) The scope of exports for production enterprises, entity enterprise groups and foreign-funded enterprises still limits on products they produced.

(4) No enterprise is allowed to handle any one of the following products: (1) endangering State security; (2) cultural relics, rare animals and plants close to extinction, products produced by prisoners and other commodities under a ban to export by laws and regulations; (3) violating the obligation committed by the People's Reublic of China; and (4) musk, natural bezoar, copper and copper alloy and platinum in short of at home.

4. Coordinated management of export commodities

Export commodities in need of coordination are to be managed by various import and export chambers. Enterprises handling export commodities under quota licences should join related import and export chambers. Concrete measures on coordinated management is to be worked out by various import and export chambers, adopted by membership meeting and strictly observed.

Enterprises handling similar export commodities are urged and encouraged to make joint operations on the basis of volunteer, equality and mutual benefit.

The Law of Trademark is to be executed strictly to protect and develop the famous brand export commodities.

5. Strengthening transparency of management on export commodities

The distribution of annual quota and the result of export commodities under quota licensing not involving commercial secrecy should be made to public so as to receive supervisions from different sides.

These provisions have been put into effect from 1 January 1993 and explained by the Ministry of Foreign Trade and Economic Cooperation.

Annex 5 (under chapter VIII)

List of import and export commodities subject to inspection enforced by the commodity inspection authorities

(Promulgated by Decree No. 4 of the State Administration of Import and Export Commodity Inspection on 1 December 1990)

In the light of the relevant stipulations of the Law of the People's Republic of China on Import and Export Commodity Inspection, the List of Import and Export Commodities Subject to Inspection Enforced by the Commodity Inspection Authorities (hereinafter referred to as the List) was promulated by the State Administration of Import and Export Commodity Inspection on 27 July 1989, and started implementation on 1 August 1989. In order to make the classification of commodities under the List to become more scientific and standardized step by step, in this year, on the basis of H.S. Code which is popularized and applied currently in the international scope, the commodities under the original List are reclassified. The new List is hereby promulgated, and started implementation from 1 January 1991. The original List is annulled from 31 December 1990.

5.1 Import commodities (303 items of 17 categories)

Serial No.	*H.S. Code*	*CCCN Heading No.*	*SITC Item No.*	*MOFTEC Code*	*Description of Commodities*	*Measuring Unit*
Section 1. Animal products

5.4 List of offices and companies of China import and export commodity inspection corporation stationed abroad

1. China Inspection Co., Ltd.
   Address: 28/F., China Resources Building
   26 Harbour Road,Wanchai, Hong Kong
   Tel.: 852-8276282
   Fax: 852-8275081
   Telex: HKCIC HX

2. CCIC (Thailand) Co., Ltd.
   Address: 22 Soi Pipat 2, Convent Road Silom, Bangrak, Bangkok 10200, Thailand
   Tel.: (662) 2385272; 2339980
   Fax: (662) 2385273
   Telex: 22235 CCIC TH

3. CCIC Bremen Import & Export Commodities Inspection GmbH
   Address: Asia-Pacific Trade Centre Bremen Room 301-305
   Birken Street, 15 D-2800, Bremen 1, Germany
   Tel.: (0049)-421-171884; 171071
   Fax: (0049)-421-18682
   Telex: 244474 CCICB D

4. China Commodity Inspection Corporation (Australia) Pty. Ltd.
   Address: 23 Hunter Street, Strathfield Sydney
   N.S.W. 2135, Australia
   Tel.: (0061)-2-6425005
   Fax: (0061)-2-6426701

5. China Commodity Inspection Corporation (Australia) Pty. Ltd.
   Address: 110 Rowell Avenue, Camberwell, Melbourne VIC 3124, Australia
   Tel.: (0061)-3-8092782
   Telex: AA 154646 JUSTSL
   Fax: (0061)-3-8890117

6. Continental Commodities Inspection Corporation (Dhaka)
   Address: House Road 7, No. 12, Block K Baridhara, Model Town, Dhaka-1212, Bangladesh
   Tel.: (008802) 610429
   Fax: (008802) 883775
   Telex: 675602 CECOF BJ

7. CCIC Caracas,Venezuela
   Address: Centro Plaza Torre A Piso 19
   6, AV, FCO, De Miranda Caracas
   Apdo 76222, Caracas 1070-A, Venezuela
   Tel.: 2835022, 2845256
   Fax: 2837668 VENEZUELA
   Telex: 25443 RCHIN VC

8. Inspection Services International Pte. Ltd.
Address: 1 Maritime Square No.09-08, World Trade Centre (Lobby), Telok Blangah Road, Singapore 0409
Tel.: (0065) 2781020
Fax: (0065) 2789493

9. CCIC (Philippines) Inc.
Address: 1694 Dasmarinas Avenue, Dasmarinas Village, Makati, Metro Manila, Philippines
Tel.: (00632) 886039; 8102580
Fax: (00632) 8102580

10. CCIC Rotterdam Import & Export Commodities Inspection GmbH
Address: Noordeinde 36, 3061 En Rotterdam, The Netherlands
Tel.: (0031)-10-4131107
Fax: (0031)-10-4048094

11. CCIC (Sao-Paolo-Brazil) Co., Ltd.
Address: R. Atlantica 460 01440, Sao Paulo, Brazil
Tel.: (0055)-11-8530962; 8816903
Fax: (0055)-11-8530962

12. Japan-China Commodities Inspection Co., Ltd.
Address: No.8-6, 1-Chome, Hatchobori, Chuo-ku
Tokyo, 104 Japan
Tel.: (0081)-3-3206-9480
Fax: (0081)-3-3206-9481

13. CCIC North America Inc.
Address: 23328 Dorset Pl Harbor City, CA90710, USA
Tel.: (001)-213-517-9870
Fax: (001)-213-517-9872

14. CCIC Bremen Import & Export Commodities Inspection GmbH, Genova Branch
Address: Via Romana Di Quarto, 173 A/5, 16148 Genova, Italy
Tel.: (0039)-10-3777397
Fax: (0039)-10-3777386
